Quanex Announces Fiscal Third Quarter 2004 Results

Record Net Sales and Operating Income

Increased Cash Dividend 12% and Authorized Additional Stock Buyback Recent Acquisitions Continued to Exceed Expectations Full Year Earnings Guidance \$3.25 - \$3.75

HOUSTON, Aug. 26, 2004 (PRIMEZONE) -- Quanex Corporation (NYSE:NX) announced fiscal third quarter results for the period ending July 31, 2004. Net sales were a record \$424.1 million in the quarter, up 71% over a year ago, and included net sales of \$106.5 from the Company's recent acquisitions of MACSTEEL Monroe and TruSeal Technologies. Demand at the Vehicular Products and Building Products segments was robust throughout the quarter, and backlogs remain healthy for the remainder of the fiscal year. Operating income was a record \$35.3 million, and income from continuing operations was \$21.0 million, up 40% compared to last year's third quarter. Diluted earnings per share from continuing operations were \$1.26, up 37% from a year ago.

Third quarter 2004 diluted earnings per share from continuing operations of \$1.26 include the operating results from Monroe and TruSeal of approximately \$0.34 per share and a LIFO charge of \$0.19 per share. Third quarter 2003 diluted earnings per share from continuing operations of \$0.92 include an executive life insurance benefit of \$0.13 per share and a LIFO charge of \$0.02 per share. Excluding the financial impact of the acquisitions, the LIFO charges and the life insurance benefit, results are up 36% for the third quarter 2004 over the third quarter 2003.

Net sales for the third quarter 2003 were \$247.4 million. Income from continuing operations and diluted earnings per share from continuing operations for the third quarter 2003 were \$15.0 million and \$0.92, respectively.

Highlights

Raymond A. Jean, chairman and chief executive officer stated, "We delivered to our investors back-to-back record quarterly operating income resulting from: (1) robust customer demand, (2) new customer programs, (3) improved

margins, (4) accretive acquisitions, and (5) ongoing company-wide lean initiatives. North American light vehicle builds in our third quarter were in line with the year-ago period. Heavy duty truck builds remain very strong compared to last year, with builds up this quarter some 40% over this time last year. Housing starts and remodeling activity remained at high levels through the quarter as well," Jean said.

"We announced an increase in our quarterly cash dividend from \$0.17 to \$0.19 per share, which equates to a \$0.76 per share dividend on an annualized basis. The Board also authorized the Company to reload its stock buyback program, increasing the existing authorization up to one million shares. These actions are consistent with our excellent financial results and our prospects for the future. Quanex historically generates very strong cash flow, and for fiscal 2004, we anticipate operating cash flow to be in the \$100 million to \$115 million range at this time. Looking out the next few years, we believe we can manage our business to generate robust cash that will enable us to continue to fund the growth of our core businesses while rewarding our long-term shareholders. Our last dividend increase occurred in the second quarter of 2003," said Jean.

"Excellent progress continued with the integration of MACSTEEL Monroe and TruSeal Technologies. Both facilities continue to exceed our operating and financial expectations. On an annualized basis, we believe the two acquisitions will now generate diluted earnings per share this year of \$0.75 to \$0.85, after interest expense, up an additional \$0.15 per share from our previous estimate," continued Jean.

Quanex uses the LIFO method of accounting to enhance its cash flow, which requires the Company to revalue inventories year to year. Raw material costs, particularly steel scrap, are up substantially from the end of last year, which negatively impacts ongoing inventory valuations based on the LIFO method. For the third quarter, the Company booked a \$5.0 million pre-tax, non-cash LIFO charge.

Quarterly Financials (\$	in millions, 3rd 2004		
Net Sales Operating Income Income from Continuing	\$424.1 35.3	\$247.4 20.3	71% 74%
Ops.	21.0	15.0	40%
Basic EPS from Continuing Ops. Diluted EPS from Continuing Ops	\$1.28	\$ 0.93 \$0.92	38% 37%
Segment Commentary			
VEHICULAR PRODUCTS (\$ in	millions) 3rd qtr 2	004 3r	d qtr 2003
Net Sales Operating Income	\$22 \$22	6.0 4.9	\$98.3 11.7

The Vehicular Products segment is focused on providing customers with value-added, engineered steel bar products and extrusions. Key market drivers are primarily light vehicle and heavy duty truck production.

"Combined North American light vehicle builds and heavy duty truck builds remained at high levels during the quarter. Customer demand at our engineered steel products business remained strong, and our operations ran at very high utilization rates. Automotive OEMs trimmed light vehicle inventory days about 13% in July from June, to 64 days. This appears to be holding OEM build schedules to slightly below this time last year, and with our new programs, our backlog will remain strong throughout the fourth quarter," continued Jean.

"Engineered steel bar shipments were up 92% in the quarter versus the year-ago quarter, and up 17% when you set aside shipments from our recently acquired Monroe facility. Operating income increased due to excellent demand and improved margins, the result of a higher scrap surcharge. Average raw material costs were about even with the second quarter," Jean said.

BUILDING PRODUCTS	(\$ in millions)	
	3rd qtr 2004	3rd qtr 2003
Net Sales	\$198.1	\$149.1
Operating Income	20.3	12.3

The Building Products segment is focused on providing customers with engineered products and components for window and door manufacturers, and is a large producer of common alloy aluminum sheet. Key market drivers are residential building and remodeling markets.

"Our engineered products business experienced very strong sales throughout the quarter," Jean said. "Demand for our window and door components remained high as housing starts and remodeling activity generally remained brisk. Customer demand is expected to again be strong in our fourth quarter."

"Our aluminum sheet business had an excellent quarter as both sales and operating income were up from last quarter and the year-ago quarter as well. Shipments were strong to our building and construction customers. Further benefiting the aluminum sheet business this year has been the gradual improvement in demand from our capital equipment, service center, and transportation customers. The business experienced higher prices that more than offset increases in material costs, and improved credit terms with many of its customers," said Jean.

Outlook

Customer demand in the Company's two target markets, vehicular products and building products, is expected to remain strong through the remainder of the fiscal year, supported by an improving economy and strong market drivers.

Vehicular Products - 2004 North American light vehicle builds are expected to be essentially in line with last year's production. Heavy truck builds for 2004 could end the calendar year up 50% over 2003 builds of 175,000, while demand in the capital equipment, farm/construction and seamless tubing industry is expected to continue to improve.

The business model for our engineered steel products business is built primarily on supplying customers with engineered alloy and carbon steel bar products whose prices are based on annual contracts, with quarterly surcharge adjustments for raw material costs. In a period of escalating raw material costs, as has been experienced over the last 12 months, earnings are reduced by the inherent three (3) month lag in the surcharge adjustment. For instance, in the July/August time period, the business experienced raw material cost increases of some \$90 per ton over June. These higher costs will be recovered, but not until the new surcharge adjustment takes effect on October 1. In a period of declining scrap costs, earnings are enhanced. To appreciate the business' normalized earnings power, financial results that reach beyond quarterly timeframes will need to be considered.

Building Products - Market drivers should remain positive through the remainder of the Company's fiscal year, resulting in excellent order activity. Housing starts for 2004 are expected to be very close to last year's record 1.85 million units, while remodeling expenditures, which the Company believes account for about one half of the segment's sales, are also expected to remain at healthy levels. The engineered products business will continue to deliver excellent operating results. At the aluminum sheet business, the Company expects continued strong sales and rising income, driven by robust customer demand and a much improved aluminum sheet supply/demand balance.

Quanex's earnings outlook for the fourth quarter remains favorable when compared to year-ago results. But the volatility of steel scrap costs and its influence on the valuation of LIFO inventories at year-end make the fourth quarter earnings outlook difficult to predict. Notwithstanding the above, the Company's original, annual 2004 diluted earnings per share guidance from continuing operations of \$3.25 to \$3.75 remains appropriate.

Other

The Company continues to account for stock options using the current transition provisions of SFAS No. 123. Accordingly, Quanex does not reflect the option expense in its income statement or diluted earnings per share. However, the Company does disclose the impact on net income and diluted earnings per share in the footnotes to its SEC financial statements. Expensing stock options in the third quarter would have reduced net income by about \$525,000 after-tax, or \$.03 on a diluted earnings per share basis.

On March 31, 2004, Quanex announced its plans for restructuring Piper Impact and called for the sale of the business. The Company stated that while Piper Impact continued to generate positive cash flow, its market focus is no longer aligned with Quanex's strategic direction of serving the vehicular products and building products markets. As part of the restructuring effort, Piper's third quarter operating results have been reclassified as discontinued operations. Quanex has a letter of intent to sell the business, and is currently working with the buyer on a definitive agreement. At this point in the process, Quanex expects proceeds from the sale of Piper to be below the division's net book value, and accordingly, recorded a \$3.1 million after-tax write-off in discontinued operations for the third quarter.

On July 1, 2004, the Emerging Issues Task Force (EITF) of the Financial Accounting Standards Board (FASB) made a preliminary proposal that would require all issuing companies of contingent convertible debentures to show the full, dilutive impact of these debentures on their financial statements. Based on the EITF proposal currently under review, this could mean an additional 2.2 million shares of earnings dilution to Quanex and have an annualized earnings per share impact of approximately \$0.30 - \$0.35 per common share. However, the Company does have the option to settle its convertible obligation with either common stock, cash or a combination of the two. If the Company chooses to settle its entire convertible obligation with cash, it would not be required to show the dilutive impact of the higher share count in the calculation of its earnings per share.

Cash Dividend Raised & Declared

The Board of Directors raised the quarterly cash dividend approximately 12%, or \$0.02 per share, which equates to an annualized increase of \$0.08 per share. The quarterly cash dividend of \$0.19 is payable to shareholders of record on September 15, 2004, and is payable September 30, 2004.

Corporate Profile

Quanex is a \$1.5 billion industry-leading manufacturer of value-added, engineered materials and components serving the Vehicular Products and Building Products markets.

Financial Statistics as of 7/31/04

Book value per common share: \$29.20; Total debt to capitalization: 28.69%; Return on invested capital: 8.62%; Return on common equity: 10.71%; Actual number of common shares outstanding: 16,519,457

Definitions

Book value per common share - calculated as total stockholders' equity as of balance sheet date divided by actual number of common shares outstanding;

Total debt to capitalization - calculated as the sum of both the current and long term portion of debt, as of balance sheet date, divided by the sum of both the current and long term portion of debt plus total stockholders' equity as of balance sheet date;

Return on invested capital - calculated as the total of the prior 12 months net income plus prior 12 months after-tax interest expense and capitalized interest, the sum of which is divided by the trailing five quarters average total debt (current and long term) and total stockholders' equity;

Return on common equity - calculated as the prior 12 months net income, divided by the trailing five quarters average common stockholders' equity.

Statements that use the words "expect," "should," "believe," "will," "might," or similar words reflecting future expectations or beliefs are forward-looking statements. The statements found above are based on current expectations. Actual results or events may differ materially from this release. Factors that could impact future results may include, without limitation, the effect of both domestic and global economic conditions, the impact of competitive products and pricing, and the availability and cost of raw materials. For a more complete discussion of factors that may affect the Company's future performance, please refer to the Company's most recent 10-K filing (December 29, 2003) under the Securities Exchange Act of 1934, in particular the sections titled, "Private Securities Litigation Reform Act" contained therein.
