Definitions

EVA® is a registered trademark of Stern Stewart & Co. and a key measure of financial performance. The term means the difference between the return on capital and the cost for using the capital over the same period.

Foreign currency balance sheet translation means gains and losses arising from translating balance sheet items mainly in Canada and Australia (principally accounts payable, deferred credits and other liabilities, and deferred income taxes) at period-end exchange rates.

Free Cash Flow is calculated by subtracting dividends and capital expenditures from cash from operating activities.

Operating Income is calculated by subtracting foreign currency balance sheet translation effects and Other Specified Items from net Income.

Other Specified Items include, for example: restructuring charges; asset impairment charges; unusual environmental charges; gains and losses on non-routine sales of assets, businesses or investments; gains and losses from legal claims; gains and losses on the redemption of debt; income tax adjustments related to prior years and the effects of changes in income tax rates; and other items that do not typify normal business activities.

ROCE (return on capital employed) is earnings before interest and tax divided by capital, which is equal to Total Capital.

Total Capital is the sum of short-term borrowings, debt maturing within one year, debt not maturing within one year, minority interest, redeemable non-retractable preference shares and common shareholders' equity.
