## PART I Financial Information

### Forward-Looking Statements

This Quarterly Report on Form 10-QSB includes "forward-looking statements" within the meaning of Section 27A of the Securities Act and Section 21E of the Exchange Act. All statements in this Report other than statements of historical fact are "forward-looking statements" for purposes of these provisions, including any statements of plans and objectives for future operations and any statements of assumptions underlying any of the foregoing. Statements that include the use of terminology such as "may," "will," "expects," "plans," "anticipates," "estimates," "potential," or "continue," or the negative thereof, or other comparable terminology are forward-looking statements.

Forward-looking statements include: (i) in Item 1 "Financial Statements," statements concerning the Company's anticipation that the Company will generate adequate future taxable income to realize the benefits of all deferred tax assets on the balance sheet; the expected sale of a Metro III aircraft in the fourth quarter of 2004; (ii) in Item 2 "Management's Discussion and Analysis or Plan of Operation -- Liquidity and Capital Resources," statements concerning the Company's belief that it will continue to be in compliance with its credit facility covenants after September 30, 2004; the Company's belief that it will have adequate cash flow to meet its ongoing operational needs, including credit facility repayments; the Company's belief that its assumptions used to forecast cash flow are reasonable; the Company's expectation regarding the long-term decline of lease rentals from its current portfolio; (iii) in Item 2 "Management's Discussion and Analysis or Plan of Operation -- Outlook," statements concerning the Company's anticipation with respect to approval by the lenders of a July 2004 aircraft acquisition for inclusion in the collateral base; the expected time for completion of maintenance on the DHC-7 aircraft; the Company's belief that the DHC-7 aircraft will be difficult to remarket and that a substantial amount of time will pass before the DHC-7 aircraft generate revenue; and the adequacy of a \$250,000 allowance against the estimated amount receivable under a note signed by a defaulting lessee; and (iv) in Item 2 "Management's Discussion and Analysis or Plan of Operation -- Factors that May Affect Future Results," statements regarding the Company's belief that it will have sufficient cash funds to make any payments that are required under the credit facility due to collateral pool limitations; the anticipated increased compliance cost created by the Sarbanes-Oxley Act and the Company's ability to fund such increased costs; the Company's anticipated purchase of used aircraft and concentration on turboprop equipment, the Company's intention to concentrate on future leases to regional air carriers; the Company's belief that overseas markets present opportunities; and the Company's belief that it is competitive because of JMC's experience and operational efficiency in identifying and obtaining financing for the transaction types desired by regional air carriers.

These forward-looking statements involve risks and uncertainties, and it is important to note that the Company's actual results could differ materially from those projected or assumed in such forward-looking statements. Among the factors that could cause actual results to differ materially are the factors detailed under the heading "Management's Discussion and Analysis or Plan of Operation -- Factors That May Affect Future Results," including general economic conditions, particularly those that affect the demand for regional aircraft and engines and the financial status of the Company's primary customers, foreign regional passenger airlines; the further disruptions to the air travel industry similar due to terrorist attacks or wartime hostilities or catastrophic events; increasing jet fuel costs that weaken the financial health of air carrier; the Company's ability to renew and enlarge its credit facility on reasonable business terms at or prior to its expiration; the financial performance of the Company's lessees and their compliance with rental, maintenance and return

## Edgar Filing: AEROCENTURY CORP - Form 10QSB

conditions under their respective leases; the availability of suitable aircraft acquisition transactions in the regional aircraft market; and future trends and results which cannot be predicted with certainty. The cautionary statements made in this Quarterly Report should be read as being applicable to all related forward-looking statements wherever they appear herein. All forward-looking statements and risk factors included in this document are made as of the date hereof, based on information available to the Company as of the date hereof, and the Company assumes no obligation to update any forward-looking statement or risk factor. You should consult the risk factors listed from time to time in the Company's filings with the Securities and Exchange Commission.

|  | =====        |

During the nine months ended September 30, 2004 and 2003, the Company paid interest totaling \$1,673,940 and \$1,460,230, respectively, and income taxes totaling \$1,080 and \$176,530, respectively.

The accompanying notes are an integral part of these statements.

### AeroCentury Corp. Notes to Condensed Consolidated Financial Statements September 30, 2004 Unaudited

#### 1. Organization and Summary of Significant Accounting Policies

##### (a) Basis of Presentation

AeroCentury Corp. ("AeroCentury"), a Delaware corporation, uses leveraged financing to acquire leased aircraft assets. The Company purchases used regional aircraft on lease to foreign and domestic regional carriers. Financial information for AeroCentury and its wholly-owned subsidiary, AeroCentury Investments II LLC ("AeroCentury II LLC") (collectively, the "Company"), is presented on a consolidated basis. All intercompany balances and transactions have been eliminated in consolidation.

##### (b) Capitalization

In 1998, in connection with the adoption of a stockholder rights plan, the Company filed a Certificate of Designation, setting forth the rights, preferences and privileges of a new Series A Preferred Stock. Pursuant to the plan, the Company issued rights to its stockholders, giving each stockholder the right to purchase one one-hundredth of a share of Series A Preferred Stock for each share of Common Stock held by the stockholder. Such rights are exercisable only under certain circumstances concerning a proposed acquisition or merger of the Company.

As discussed above, AeroCentury is the sole member and manager of AeroCentury II LLC.

##### (c) Cash and Cash Equivalents/Deposits

The Company considers highly liquid investments readily convertible into known amounts of cash, with original maturities of 90 days or less, as cash equivalents. Because the Company's leases do not restrict the Company's use of such amounts, cash previously reported as deposits, representing cash balances

## Edgar Filing: AEROCENTURY CORP - Form 10QSB

held related to maintenance reserves and security deposits, has been reclassified to cash and cash equivalents.

### (d) Aircraft and Aircraft Engines On Operating Leases

The Company's interests in aircraft and aircraft engines are recorded at cost, which includes acquisition costs. Depreciation is computed using the straight-line method over the aircraft's estimated economic life (generally assumed to be twelve years from the date of acquisition), to an estimated residual value based on appraisal.

### (e) Impairment of Long-lived Assets

The Company periodically reviews its portfolio of assets for impairment in accordance with Statement of Financial Accounting Standards ("SFAS") No. 144, "Accounting for the Impairment or Disposal of Long-lived Assets." Such review necessitates estimates of current market values, re-lease rents, residual values and component values. The estimates are based on currently available market data and are subject to fluctuation from time to time. The Company initiates its review periodically, whenever events or changes in circumstances indicate that the carrying amount of a long-lived asset may not be recoverable. Recoverability of an asset is measured by comparison of its carrying amount to the expected future undiscounted cash flows (without interest charges) that the asset is expected to generate. Any impairment to be recognized is measured by the amount by which the carrying amount of the asset exceeds its fair market value. Significant management judgment is required in the forecasting of future operating results which are used in the preparation of projected undiscounted cash flows and, should different conditions prevail, material write downs may occur.

AeroCentury Corp.  
Notes to Condensed Consolidated Financial Statements  
September 30, 2004  
Unaudited

### 1. Organization and Summary of Significant Accounting Policies (continued)

#### (f) Loan Commitment and Related Fees

To the extent that the Company is required to pay loan commitment fees and legal fees in order to secure debt, such fees are amortized over the life of the related loan.

#### (g) Maintenance Reserves and Accrued Costs and Security Deposits

Maintenance costs under the Company's triple net leases are generally the responsibility of the lessees. The accompanying balance sheet reflects liabilities for maintenance reserves and accrued costs, which include refundable and non-refundable maintenance payments received from lessees, as well as security deposits received from lessees. At September 30, 2004, the Company had accrued liabilities for refundable maintenance reserves of \$421,650, non-refundable maintenance reserves of \$8,396,050 and security deposits of \$1,297,150.

Maintenance reserves which are refundable to the lessee at the end of

## Edgar Filing: AEROCENTURY CORP - Form 10QSB

the lease may be retained by the Company if such amounts are necessary to meet the return conditions specified in the lease and, in some cases, to satisfy any other payments due under the lease.

Non-refundable maintenance reserves received by the Company are accounted for as a liability until the aircraft has been returned at the end of the lease, at which time the Company evaluates the adequacy of the remaining reserves in light of maintenance to be performed as a result of hours flown. At that time, any excess is recorded as income. When an aircraft is sold, any excess non-refundable maintenance reserves are recorded as income.

The Company periodically reviews maintenance reserves for adequacy in light of the number of hours flown, airworthiness directives issued by the manufacturer or government authority, and the return conditions specified in the lease, as well as the condition of the aircraft upon return or inspection. As a result of such review, when it is probable that the Company has incurred costs for maintenance in excess of amounts received from lessees, the Company accrues its share of costs for work to be performed as a result of hours flown. At September 30, 2004, the Company had accrued maintenance costs, in excess of reserve amounts received under the leases, of approximately \$922,050 related to several of its aircraft.

The Company's leases are typically structured so that if any event of default occurs under a lease, the Company may apply all or a portion of the lessee's security deposit to cure such default. If such application of the security deposit is made, the lessee typically is required to replenish and maintain the full amount of the deposit during the remaining term of the lease. All of the security deposits received by the Company are refundable to the lessee at the end of the lease, upon satisfaction of all lease terms.

AeroCentury Corp.  
Notes to Condensed Consolidated Financial Statements  
September 30, 2004  
Unaudited

1. Organization and Summary of Significant Accounting Policies (continued)

(h) Income Taxes

The Company follows the liability method of accounting for income taxes. Under the liability method, deferred income taxes are recognized for the tax consequences of "temporary differences" by applying enacted statutory tax rates applicable to future years to differences between the financial statement carrying amounts and the tax bases of existing assets and liabilities. The effect on deferred taxes of a change in the tax rates is recognized in income in the period that includes the enactment date.

(i) Revenue Recognition

Revenue from leasing of aircraft assets is recognized as operating lease revenue on a straight-line basis over the terms of the applicable lease agreements. If the Company deems a portion of operating lease revenue as potentially uncollectible, the Company records an allowance for doubtful

## Edgar Filing: AEROCENTURY CORP - Form 10QSB

accounts.

### (j) Use of Estimates

The preparation of financial statements in conformity with accounting principles generally accepted in the United States requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosures of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Actual results could differ from those estimates.

The most significant estimates with regard to these financial statements are the residual values of the aircraft, the useful lives of the aircraft, the amount and timing of cash flow associated with each aircraft that are used to evaluate impairment, if any, accrued maintenance costs in excess of amounts received from lessees, and the amounts recorded as bad debt allowances.

### (k) Comprehensive Income

The Company does not have any comprehensive income other than the revenue and expense items included in the consolidated statements of income. As a result, comprehensive income equals net (loss)/income for the three months and nine months ended September 30, 2004 and 2003.

### (l) Recent Accounting Pronouncements

In November 2002, the Financial Accounting Standards Board ("FASB") issued SFAS Interpretation No. 45, "Guarantor's Accounting and Disclosure Requirements for Guarantees, Including Indirect Guarantees of Indebtedness of Others" ("FIN 45"). FIN 45 is effective for guarantees issued or modified after December 31, 2002. The Company had one guarantee, which was issued prior to December 31, 2002. During the second quarter of 2003, the Company recorded a liability for the maximum obligation it had assumed under this guarantee and wrote off the related receivable. During the fourth quarter of 2003, the vendor waived the amount due, and the Company reversed its accrual.

### 1. Organization and Summary of Significant Accounting Policies (continued)

#### (1) Recent Accounting Pronouncements (continued)

In January 2003, the FASB issued interpretation FIN No. 46, Consolidation of Variable Interest Entities ("FIN 46"), which was subsequently revised in December 2003 ("FIN 46R"). FIN 46R requires a variable interest entity to be consolidated by a company if that company is the primary beneficiary of the entity. A company is a primary beneficiary if it is subject to a majority of the risk of loss from the variable interest entity's activities or entitled to receive a majority of the entity's residual returns or both.

FIN 46R also requires disclosures about variable interest entities that a company is not required to consolidate but in which it has a significant variable interest. FIN 46R was applicable immediately to variable interest

## Edgar Filing: AEROCENTURY CORP - Form 10QSB

entities created after January 31, 2003, and will be effective for all other existing entities in financial statements for periods ending after December 15, 2004. Certain of the disclosure requirements apply in all financial statements issued after December 31, 2003, regardless of when the variable interest entity was established. The Company has no interest in any variable interest entity and, therefore, the full adoption of FIN 46R had no effect on the Company's consolidated financial condition or results of operations.

SFAS 146, Accounting for Costs Associated with Exit or Disposal Activities, was effective for activities that were initiated after December 31, 2002. SFAS 146 addresses significant issues regarding the recognition, measurement and reporting of costs that are associated with exit and disposal activities, including restructuring activities that were previously accounted for under Emerging Issues Task Force ("EITF") No. 94-3, Liability Recognition for Certain Employee Termination Benefits and Other Costs to Exit an Activity (including Certain Costs Incurred in a Restructuring). The adoption of this pronouncement had no effect on the Company's financial statements.

SFAS 150, Accounting for Certain Financial Instruments with Characteristics of Both Liabilities and Equities, addresses how to classify and measure certain financial instruments with characteristics of both liabilities (or an asset in some circumstances) and equity. SFAS 150 requirements apply to issuers' classification and measurement of freestanding financial instruments, including those that comprise more than one option or forward contract. It requires that all instruments with characteristics of both liabilities and equity be classified as a liability and remeasured at fair value on each reporting date. SFAS 150 was effective immediately for all financial instruments entered into or modified after May 31, 2003, and for the first interim period beginning after June 15, 2003 for all other instruments. The adoption of SFAS 150 had no impact on the Company's financial statements.

### (m) Reclassifications

Certain amounts previously classified as deposits in the accompanying 2003 unaudited condensed consolidated financial statements have been reclassified to cash and cash equivalents in order to conform to the presentation of the 2004 unaudited condensed consolidated financial statements.

### AeroCentury Corp. Notes to Condensed Consolidated Financial Statements September 30, 2004 Unaudited

#### 2. Aircraft and Aircraft Engines On Operating Leases

At September 30, 2004, the Company owned six deHavilland DHC-8s, one deHavilland DHC-7, three deHavilland DHC-6s, one Fairchild Metro III, two Shorts SD 3-60s, ten Fokker 50s, two Saab 340As and 25 turboprop engines. The Company acquired one aircraft and sold one turboprop engine during the third quarter of 2004.

During the third quarter of 2004:

The Company purchased one deHavilland DHC-8 aircraft and leased it to a regional carrier in the Caribbean for a term expiring in November 2007. The Company's banks have not yet approved the July transaction for

## Edgar Filing: AEROCENTURY CORP - Form 10QSB

inclusion of the purchased aircraft in the credit facility borrowing base.

The Company sold one of its deHavilland DHC-7 aircraft and recorded a loss of approximately \$151,000. The Company is disputing an overcharge of approximately \$62,000 of maintenance charges for the aircraft with the vendor. The Company is negotiating a reduction of part of this amount, which reduction would decrease the loss on sale.

The Company sold one of its turboprop engines and recorded a gain of approximately \$172,000.

The leases for two of the Company's deHavilland DHC-6 aircraft were extended for five years, through July 2009.

The leases for two of the Company's Fokker 50 aircraft were extended for two years, from their original expiration dates in December 2005 and October 2006 to December 2007 and October 2008, respectively.

The lease for 24 of the Company's turboprop engines was extended through December 2004.

The Company and the lessee of the Company's two Saab 340A aircraft reached an agreement for the lessee to return the aircraft to a maintenance facility, in return for which ACY released the lessee from its obligations under the leases. The Company wrote off approximately \$147,000 of rent receivable. The Company also wrote off approximately \$33,000 of prepaid legal expenses which would have been amortized over the remainder of the leases and accrued approximately \$390,000 for estimated maintenance to be performed to ready the aircraft for re-lease.

In accordance with its periodic review of its portfolio of assets for impairment, during the third quarter of 2004, the Company recorded a provision for impairment of approximately \$463,000 for one of its aircraft, based on the Company's cash flow analysis and third party appraisals.

During the second quarter of 2004, the lessee of the Company's Fairchild Metro III aircraft filed for bankruptcy protection in Canada. At September 30, 2004, the lessee owed maintenance reserves of \$11,320 attributable to periods before the filing date. The Company holds a security deposit of \$25,890 from the lessee. During the third quarter, the Company and the lessee agreed to terminate the lessee's obligation to pay rent as of September 30, 2004. The lessee has paid all rent and reserve amounts due after the filing date. As discussed in Note 7, in the fourth quarter of 2004, the lessee returned the aircraft to the Company and the Company signed a purchase agreement for the sale of the aircraft.

2. Aircraft and Aircraft Engines On Operating Leases (continued)

## Edgar Filing: AEROCENTURY CORP - Form 10QSB

At September 30, 2004, four of the Company's aircraft and one of its turboprop engines were off-lease. The Company is seeking re-lease or sale opportunities for the off-lease aircraft and engine.

The lease for one of the Company's aircraft expired in September 2002, but the lessee was obligated under the lease to continue to pay rent until certain return conditions were met. The Company and the lessee have agreed to certain terms and conditions regarding the return of the aircraft and the amounts owed by the lessee. Although the Company held a security deposit from this lessee, the amount of the deposit was not sufficient to pay the rent accrued through the return date and reimburse the Company for maintenance work which was performed to meet the return conditions of the lease. The lessee agreed to deliver a note, with a principal amount equal to the rent and maintenance in excess of the security deposit. As discussed in Note 7, the lessee signed a note in the amount of approximately \$625,000 in the fourth quarter of 2004. The Company had previously recorded a \$250,000 allowance against the amount receivable and believes that such allowance is adequate to cover any shortfall in payment under the note. The aircraft was delivered to a new lessee in September 2003.

### 3. Note Receivable

During the third quarter of 2003, the Company's two DHC-7 aircraft were returned to the Company by a defaulted lessee, and a settlement agreement was reached with the lessee in the amount of \$500,000. The lessee paid \$20,000 to the Company at the time of the settlement and signed a note in the amount of \$480,000. The Company recorded an allowance for the full amount of the note and recorded income as note payments were received. The Company has an agreement with a third party, who assisted the Company in the protection, management and recovery of the Company's assets from the lessee, which provides that the third party receives 40% of all amounts collected under the note. In the first quarter of 2004, based on the lessee's timely payment history, the Company reversed 5% of the remaining allowance and recorded it as income. In the third quarter, the Company reversed an additional amount, which decreased the allowance to 50% of the note balance. In both instances, the Company also recorded the related expense for the amount payable to the third party. The Company will continue to monitor the lessee's payment history and may reverse additional portions of the allowance as the Company deems appropriate.

### 4. Notes Payable and Accrued Interest

#### (a) Credit facility

In August 2003, the Company reached agreement with its lenders to renew the credit facility through August 31, 2004. In January 2004, a third bank was added to the Company's credit facility participant group. The new participant agreed to finance \$10 million, bringing the Company's credit facility limit to \$50 million. The facility bears interest, at the Company's option, at either (i) prime plus a margin of 50 to 150 basis points or (ii) LIBOR plus a margin of 275 to 375 basis points. Both the prime and LIBOR margins are determined by certain financial ratios. In August 2004, the maturity date was extended to October 29, 2004.

As discussed in Note 7, the facility was subsequently extended to November 5, 2004. In November 2004, the credit facility was renewed through October 31, 2005. The renewal agreement also revised certain pricing and covenant provisions and waived noncompliance with two covenants at September 30, 2004. In connection with the renewal, the LIBOR margin was set at 375 basis points through March 2005, after which a margin of 275 to 375 basis points will be determined by certain financial ratios. As of September 30, 2004, the Company was in compliance with all other covenants, \$38,305,000 was outstanding under the credit facility, and interest of \$160,760 was accrued.

## Edgar Filing: AEROCENTURY CORP - Form 10QSB

AeroCentury Corp.  
Notes to Condensed Consolidated Financial Statements  
September 30, 2004  
Unaudited

4. Notes Payable and Accrued Interest (continued)

In the first nine months of 2004, the Company repaid a total of \$6,050,000 of the outstanding principal under its credit facility.

The Company's longer term viability will depend upon its ability to renew the credit facility at its October 2005 expiration with the existing or replacement lenders, or to refinance the credit facility using equity or alternative debt financing. Management expects the credit facility to be renewed on market terms; however, there is no assurance that the Company will be able to achieve either alternative prior to the currently scheduled expiration.

If the Company is not able to renew the credit facility for the full outstanding amount, and cannot find suitable alternative financing, it may be required to make a principal repayment of the outstanding balance, or that portion of the balance for which replacement financing is not obtained. The Company does not have sufficient cash reserves to make a repayment of a significant portion of the outstanding credit facility indebtedness and would be forced to sell assets in order to raise funds to make such repayment. Such sales would likely not be on favorable terms to the Company as the full market value of the assets sold may not be realized by the Company in order to expedite the consummation of the sales.

Even if the Company is able to successfully sell a portion of its assets and use the proceeds to repay the credit line facility, if a renewed or replacement facility is not obtained, the Company's future ability to acquire assets would be significantly impaired, as the credit facility is the Company's primary means of financing acquisitions and no other sources of acquisition financing are immediately available. Thus the renewal or replacement of the Company's credit line facility in an amount equal to or greater than the current \$50 million limit will be critical to the Company's future operations.

(b) Special purpose financing

In September 2000, the Company acquired a deHavilland DHC-8 aircraft using cash and bank financing separate from its credit facility. The financing resulted in a note obligation, as amended, in the amount of \$3,575,000, due April 15, 2006, which bears interest at the rate of one-month LIBOR plus 3%. The note is collateralized by this aircraft and is non-recourse to the Company. Payments due under the note consist of monthly principal and interest and a balloon principal payment due on the maturity date. The financing also provides for a six month remarketing period at the expiration or earlier termination of the lease. Payments due on the financing are reduced during this remarketing period and the balloon principal payment is due at the end of the six month period. The balance of the note payable at September 30, 2004 was \$1,965,490 and interest of \$2,110 was accrued. As of September 30, 2004, the Company was in compliance with all covenants of this note obligation.

### 5. Income Taxes

The items comprising income tax expense/(benefit) are as follows:

|                                | For the Nine Months Ended<br>September 30,<br>2004 |
|--------------------------------|--|
|                                | ----   |
| Current tax provision:         |  |
| Federal                        | \$ 107,820   |
| State                          | 2,830  |
|                                | -----  |
| Current tax provision          | 110,650  |
|                                | -----  |
| Deferred tax benefit:          |  |
| Federal                        | (372,910)  |
| State                          | (37,570)   |
|                                | -----  |
| Deferred tax benefit           | (410,480)  |
|                                | -----  |
| Total benefit for income taxes | \$ (299,830)                                       |
|                                | =====  |

Total income tax benefit differs from the amount that would be provided by applying the statutory federal income tax rate to pretax earnings as illustrated below:

|   | For the Nine Months Ended<br>September 30,<br>2004 |
|---|--|
|   | ----   |
| Income tax benefit at statutory federal income tax rate | \$ (264,120)                                       |
| State tax benefit, net of federal benefit               | (2,320)  |
| Tax rate differences                                    | (33,390)   |
|   | -----  |
| Total income tax benefit                                | \$ (299,830)                                       |
|   | =====  |

# Edgar Filing: AEROCENTURY CORP - Form 10QSB

## AeroCentury Corp. Notes to Condensed Consolidated Financial Statements September 30, 2004 Unaudited

### 5. Income Taxes (continued)

Temporary differences and carryforwards that gave rise to a significant portion of deferred tax assets and liabilities as of September 30, 2004 are as follows:

|   |                |
|---|----------------|
| Deferred tax assets:                          |                |
| Bad debt allowance                            | \$ 152,900     |
| Deferred maintenance                          | 480,750        |
| Maintenance reserves                          | 2,714,740      |
| Prepaid rent and other                        | 63,850         |
|   | -----          |
| Deferred tax assets                           | 3,412,240      |
| Deferred tax liabilities:                     |                |
| Depreciation on aircraft and aircraft engines | (5,596,870)    |
| Unearned income                               | (9,790)        |
| Other   | (179,550)      |
|   | -----          |
| Net deferred tax liabilities                  | \$ (2,373,970) |
|   | =====          |

No valuation allowance is deemed necessary, as the Company anticipates generating adequate future taxable income to realize the benefits of all deferred tax assets on the balance sheet.

### 6. Related Party Transactions

Since the Company has no employees, the Company's portfolio of leased aircraft assets is managed and administered under the terms of a management agreement with JetFleet Management Corp. ("JMC"), which is an integrated aircraft management, marketing and financing business and a subsidiary of JetFleet Holding Corp. ("JHC"). Certain officers of the Company are also officers of JHC and JMC and hold significant ownership positions in both JHC and the Company. Under the management agreement, JMC receives a monthly management fee based on the net asset value of the assets under management. JMC may also receive an acquisition fee for locating assets for the Company, provided that the aggregate purchase price, including chargeable acquisition costs and any acquisition fee, does not exceed the fair market value of the asset based on appraisal, and a remarketing fee in connection with the sale or re-lease of the Company's assets. The management fees, acquisition fees and remarketing fees may not exceed the customary and usual fees that would be paid to an unaffiliated party for such services. The Company recorded management fees of \$1,459,140 and \$1,441,890 during the nine months ended September 30, 2004 and 2003, respectively. The Company paid acquisition fees of \$260,000 and \$160,000 to JMC in April and August 2004, respectively, in connection with the Company's purchase of five aircraft. Because the Company did not acquire any aircraft during the first nine months of 2003, no acquisition fees were paid to JMC. No remarketing fees were accrued to JMC during the first nine months of 2004 or 2003.

## Edgar Filing: AEROCENTURY CORP - Form 10QSB

AeroCentury Corp.  
Notes to Condensed Consolidated Financial Statements  
September 30, 2004

### 7. Subsequent Events

In October 2004, the Company signed a purchase agreement for the sale of its Fairchild Metro III aircraft. The Company expects the sale to be complete in the fourth quarter and that the sale will result in a gain of approximately \$130,000.

In November 2004, the former lessee of one of the Company's aircraft signed a note in the amount of approximately \$625,000 for rent and maintenance owed to the Company in excess of the security deposit held by the Company. The note provides for eighteen monthly principal and interest payments beginning in November 2004.

In October 2004, the maturity date of the Company's credit facility was extended through November 5, 2004. In November 2004, the Company reached agreement with its lenders to renew its credit facility through October 31, 2005. The renewal agreement also revised certain pricing and covenant provisions and waived compliance with two covenants at September 30, 2004.

## Item 2. Management's Discussion and Analysis or Plan of Operation.

### Overview

The Company is a lessor of turboprop aircraft and engines which are used by customers pursuant to triple net operating leases. The acquisition of such equipment is generally made using debt financing. The Company's profitability and cash flow are dependent in large part upon its ability to acquire equipment, obtain and maintain favorable lease rates on such equipment, and re-lease owned equipment that comes off lease. The Company is subject to the credit risk of its lessees, both as to collection of rent and to performance by the lessees of obligations for maintaining the aircraft. Since lease rates for assets in the Company's portfolio generally decline as the assets age, the Company's ability to maintain revenue and earnings over the medium and long term is dependent upon the Company's ability to grow its asset portfolio.

The Company's principal expenditures are for interest costs on its financing, management fees, and maintenance of its aircraft assets. Maintenance expenditures are generally incurred only when aircraft are off lease, are being prepared for re-lease, or require maintenance in excess of lease return conditions.

The most significant non-cash expenses include accruals of maintenance costs to be borne by the Company and aircraft depreciation, both of which are the result

## Edgar Filing: AEROCENTURY CORP - Form 10QSB

of significant estimates. Maintenance expenses are estimated and accrued based upon utilization of the aircraft. Depreciation is recognized based upon the estimated residual value of the aircraft at the end of their estimated lives. Deviation from these estimates could have a substantial effect on the Company's cash flow and profitability.

### Critical Accounting Policies

In response to the Securities and Exchange Commission's Release No. 33-8040, "Cautionary Advice Regarding Disclosure About Critical Accounting Policies," the Company has identified the most critical accounting policies upon which its financial status depends. It determined the critical policies by considering those that involve the most complex or subjective decisions or assessments. The Company identified these policies to be those related to valuation of aircraft, depreciation, maintenance reserves and accrued costs, and lease rental revenue recognition.

#### a. Use of Estimates

In preparing its financial statements, as well as in evaluating future cash flow, the Company makes significant estimates, including the residual values of the aircraft, the useful lives of the aircraft, the amount and timing of cash flow associated with each aircraft that are used to evaluate impairment, if any, accrued maintenance costs in excess of amounts received from lessees, and amounts recorded as bad debt allowances. Actual results will likely vary from estimates.

The Company continually evaluates both short and long term maintenance expected to be required for each of its aircraft, including the estimated cost thereof, and compares it to the maintenance reserves established for each aircraft. With respect to estimated maintenance costs, the Company has found its accruals to be generally accurate. Nevertheless, the Company has incurred significant maintenance expense in connection with (i) aircraft which were returned early in a condition worse than required by the lease and (ii) aircraft which were returned at lease end in better condition than required by the lease which under the terms of the lease required that the Company compensate the lessee for the better condition. Specifically, the Company incurred maintenance expense of approximately \$442,000 and \$1,864,000 in connection with the early return of aircraft in 2004 and 2003, respectively.

#### b. Impairment of Long-lived Assets

The Company periodically reviews its portfolio of assets for impairment in accordance with Statement of Financial Accounting Standards ("SFAS") No. 144, "Accounting for the Impairment or Disposal of Long-lived Assets." Such review necessitates estimates of current market values, re-lease rents, residual values and component values. The estimates are based on currently available market data and third-party appraisals and are subject to fluctuation from time to time. The Company initiates its review periodically, whenever events or changes in circumstances indicate that the carrying amount of a long-lived asset may not be recoverable. Recoverability of an asset is measured by comparison of its carrying amount to the expected future undiscounted cash flows (without interest charges) that the asset is expected to generate. Any impairment to be recognized is measured by the amount by which the carrying amount of the asset exceeds its fair market value. Significant management judgment is required in the forecasting of future operating results which are used in the preparation of projected undiscounted cash flows and should different conditions prevail, material write downs may occur. In accordance with its periodic review of its portfolio of assets for impairment, during the third quarter of 2004, the Company recorded a provision for impairment of approximately \$463,000 for one of its aircraft, based on the Company's cash flow analysis and third party appraisals.

## Edgar Filing: AEROCENTURY CORP - Form 10QSB

### c. Depreciation Policies

The Company's interests in aircraft and aircraft engines are recorded at cost, which includes acquisition costs. Depreciation is computed using the straight-line method over the aircraft's estimated economic life (generally assumed to be twelve years from the date of acquisition), to an estimated residual value based on appraisal.

### d. Maintenance Reserves and Accrued Costs

Maintenance costs under the Company's triple net leases are generally the responsibility of the lessees. Maintenance reserves and accrued costs in the accompanying balance sheet include refundable and non-refundable maintenance payments received from lessees. The Company periodically reviews maintenance reserves for each of its aircraft for adequacy in light of the number of hours flown, airworthiness directives issued by the manufacturer or government authority, and the return conditions specified in the lease, as well as the condition of the aircraft upon return or inspection. As a result of such review, if it is probable that the Company has incurred costs for maintenance in excess of amounts received from lessees, the Company accrues its share of costs for work to be performed.

### e. Revenue Recognition

Revenue from leasing of aircraft assets is recognized as operating lease revenue on a straight-line basis over the terms of the applicable lease agreements. If the Company deems a portion of operating lease revenue as potentially uncollectible, the Company records an allowance for doubtful accounts.

## Results of Operations

### a. Revenues

Operating lease revenue was approximately \$104,000 lower in the nine months ended September 30, 2004, versus the same period in 2003, primarily because of lower lease rates for aircraft re-leased during 2003 and 2004 and the effect of aircraft off lease during 2004. These decreases, totaling approximately \$928,000, were partially offset by an increase of approximately \$824,000 resulting from aircraft purchased during 2004 and the re-lease of several aircraft which had been off lease in 2003. Operating lease revenue was approximately \$216,000 higher in the three months ended September 30, 2004 versus 2003 primarily because of the combined effect, totaling approximately \$502,000, of operating lease revenue from aircraft purchased during 2004 and the re-lease of several aircraft which had been off lease in 2003. These increases were partially offset by lower lease rates for aircraft re-leased after the third quarter of 2003 and the effect of aircraft off lease during the third quarter of 2004, the sum of which was a total of approximately \$286,000.

Gain on sale of aircraft and aircraft engines was approximately \$21,000 higher in the nine months and three months ended September 30, 2004 versus the same periods in 2003 as a result of the sale of one of the Company's turboprop engines, which resulted in a gain of approximately \$172,000, the effect of which was partially offset by the sale of one of the Company's deHavilland DHC-7 aircraft, which resulted in a loss of approximately \$151,000. There were no sales in the same periods of 2003.

## Edgar Filing: AEROCENTURY CORP - Form 10QSB

Other income was approximately \$227,000 and \$158,000 higher in the nine months and three months, respectively, ended September 30, 2004 versus the same periods in 2003 because of note payments received from a former lessee on a fully reserved note and because, in 2004, based on the lessee's payment history to date, the Company reversed a portion of the allowance, which decreased the allowance to 50% of the note balance. The Company continues to monitor the lessee's payment timeliness and will evaluate further reversals of the allowance as the Company deems appropriate.

### b. Expense items

Depreciation was approximately \$118,000 and \$53,000 higher in the nine months and three months ended September 30, 2004 versus the same periods in 2003, respectively, primarily because of the purchase of aircraft in April and July 2004, the effect of which was partially offset by the sale of two assets in the third quarter of 2004. Management fees were approximately \$17,000 and \$25,000 higher in the nine month and three month periods of 2004 compared to 2003, respectively, for the same reasons.

Interest expense was approximately \$335,000 and \$164,000 higher in the nine months and three months ended September 30, 2004, respectively, versus the same periods in 2003, primarily as a result of higher average interest rates arising from changes in the Company's credit facility in the third quarter of 2003 and higher market interest rates, the effect of which was partially offset by a lower average principal balance in 2004 compared to 2003.

Professional fees and general and administrative expenses were approximately \$145,000 and \$150,000 higher in the nine months and three months ended September 30, 2004, respectively, primarily as a result of higher accounting fees and fees accrued in connection with the reversal of a portion of the allowance on a note receivable which had been fully reserved previously. In addition, legal fees were higher in the three month period of 2004 as a result of the early return of two aircraft by a lessee.

In accordance with its periodic review of its portfolio of assets for impairment, during the third quarter of 2004, the Company recorded a provision for impairment of approximately \$463,000 for one of its aircraft, based on the Company's cash flow analysis and third party appraisals.

Maintenance expense was approximately \$1,432,000 lower in the nine month period of 2004 versus 2003, primarily as a result of the default on two leases and subsequent return of the aircraft and the early return of a third aircraft by a carrier in the second quarter of 2003 and the accrued maintenance related to making the aircraft ready for re-lease or sale. Maintenance expense was approximately \$313,000 higher in the three month period of 2004 versus 2003, primarily as a result of estimated costs necessary to ready two aircraft, which were returned early by a lessee, for re-lease.

Insurance expense was approximately \$17,000 and \$13,000 higher in the nine month and three month periods of 2004 primarily as a result of having to provide owner coverage on aircraft for more off-lease days in 2004 as compared to 2003. This increase was partially offset by lower rates per dollar of coverage in 2004 versus 2003.

Bad debt expense was approximately \$903,000 lower and \$147,000 higher in the nine month and three month periods ended September 30, 2004, respectively, versus the same periods in 2003. In the first six months of 2003, the Company recorded bad debt expense in connection with the default described above, as well as a write-off of accrued rent and estimated maintenance work performed in connection with the end-of-lease return of an aircraft from another regional air carrier in 2003. In the third quarter of 2004, the Company recorded bad debt

## Edgar Filing: AEROCENTURY CORP - Form 10QSB

expense for rent and reserves written off in connection with the early return of two aircraft by a lessee.

The Company's effective tax rates in the nine months ended September 30, 2004 and 2003 were approximately 39% and 37%, respectively. The change in rate was primarily a result of the recognition of tax benefits relating to different state tax rates than had been accrued in prior years. Since the Company incurred a loss for both nine month periods, the recognition of tax benefits related to the reduced state tax rates increased the Company's tax benefit from the loss and its effective tax rate. The loss for the nine month period ended September 30, 2004 was less than the loss for the nine month period ended September 30, 2003. As a result, the recognition of tax benefits related to the reduced state tax rates increased the effective tax rates more for the nine month period ended September 30, 2004, than for the nine month period ended September 30, 2003.

For the three month periods ending September 30, 2004 and 2003 the Company's effective tax rates were 36% and 20%, respectively. Since the Company had income for the three month period ended September 30, 2003, the recognition of tax benefits related to the reduced state tax rates decreased the Company's effective tax rate for that period. Conversely, the Company incurred a loss for the three month period ended September 30, 2004, so that the recognition of the tax benefits related to reduced state tax rates increased the Company's tax benefit from the loss and its effective tax rate for that three month period.

### Liquidity and Capital Resources

The Company is currently financing its assets primarily through credit facility borrowings, special purpose financing and excess cash flow.

#### a. Credit facility

In August 2003, the Company reached agreement with its lenders to renew the credit facility through August 31, 2004. In January 2004, a third bank was added to the Company's credit facility participant group. The new participant agreed to finance \$10 million, bringing the Company's credit facility limit to \$50 million. The facility bears interest, at the Company's option, at either (i) prime plus a margin of 50 to 150 basis points or (ii) LIBOR plus a margin of 275 to 375 basis points. Both the prime and LIBOR margins are determined by certain financial ratios. In August 2004, the maturity date was extended to October 29, 2004 and was subsequently extended to November 5, 2004.

In November 2004, the credit facility was renewed through October 31, 2005. In connection with the renewal, certain covenant provisions were revised and the LIBOR margin was set at 375 basis points through March 2005, after which a margin of 275 to 375 basis points will be determined by certain financial ratios.

In accordance with the agreement for the credit facility, the Company must maintain compliance with certain financial covenants. The Company was out of compliance with a financial ratio covenant on September 30, 2004, as well as a covenant which requires positive quarterly earnings. As part of the credit facility renewal, the banks waived those covenants at September 30, 2004. The Company was in compliance with all other covenants, \$38,305,000 was outstanding under the credit facility, and interest of \$160,760 was accrued at September 30, 2004.

In the first nine months of 2004, the Company repaid a total of \$6,050,000 of the outstanding principal under its credit facility. Based on its current projections, the Company believes it will continue to be in compliance with all

## Edgar Filing: AEROCENTURY CORP - Form 10QSB

covenants of its credit facility on measurement dates after September 30, 2004, but there can be no assurance of such compliance. See "Factors That May Affect Future Results - 'Credit Facility Obligations' and 'Risks of Debt Financing'," below.

The Company's interest expense in connection with the credit facility generally moves up or down with prevailing interest rates, as the Company has not entered into any interest rate hedge transactions for the credit facility indebtedness. Because aircraft owners seeking financing generally can obtain financing through either leasing transactions or traditional secured debt financings, prevailing interest rates are a significant factor in determining market lease rates, and market lease rates generally move up or down with prevailing interest rates, assuming supply and demand of the desired equipment remain constant. However, because lease rates for the Company's assets typically are fixed under existing leases, the Company normally does not experience any positive or negative impact in revenue from changes in market lease rates due to interest rate changes until existing leases have terminated.

### b. Special purpose financing

In September 2000, the Company acquired a deHavilland DHC-8 aircraft using cash and bank financing separate from its credit facility. The financing resulted in a note obligation, as amended, in the amount of \$3,575,000, due April 15, 2006, which bears interest at the rate of one-month LIBOR plus 3%. The note is collateralized by this aircraft and is non-recourse to the Company. Payments due under the note consist of monthly principal and interest and a balloon principal payment due on the maturity date. The financing also provides for a six month remarketing period at the expiration or earlier termination of the lease. Payments due on the financing are reduced during this remarketing period and the balloon principal payment is due at the end of the six month period. The balance of the note payable at September 30, 2004 was \$1,965,490 and interest of \$2,110 was accrued. As of September 30, 2004, the Company was in compliance with all covenants of this note obligation.

The availability of special purpose financing in the future will depend on several factors including (1) the availability of funds to be used for the equity portion of the financing, (2) the type of asset being financed and, (3) the creditworthiness of the underlying lessee. The availability of funds for the equity portion of the financing will be dependent on the Company's cash flow, as discussed in "Cash Flow," below.

### c. Cash flow

The Company's primary source of revenue is lease rentals of its aircraft assets. It is the Company's policy to monitor each lessee's needs in periods before leases are due to expire. If it appears that a customer will not be renewing its lease, the Company immediately initiates marketing efforts to locate a potential new lessee or purchaser for the aircraft. The goal of this procedure is to reduce the time that an asset will be off lease. The Company's aircraft are subject to leases with varying expiration dates through July 2009.

Management believes that the Company will have adequate cash flow to meet its ongoing operational needs, including required repayments under its credit facility, based upon (i) its estimates of future revenues and expenditures and (ii) the expectation that the credit facility will be renewed on or before expiration. The Company's expectations concerning such cash flows are based on existing lease terms and rents, as well as numerous estimates, including (i) rents on assets to be re-leased, (ii) sale proceeds of certain assets currently under lease, (iii) the cost and anticipated timing of maintenance to be

## Edgar Filing: AEROCENTURY CORP - Form 10QSB

performed and (iv) acquisition of additional aircraft and the lease thereof at favorable lease terms. While the Company believes that the assumptions it has made in forecasting its cash flow are reasonable in light of experience, actual results could deviate from such assumptions. Among the more significant external factors outside the Company's control that could have an impact on the accuracy of cash flow assumptions are (i) an increase in interest rates that negatively affects the Company's GAAP profitability and causes the Company to violate covenants of its credit facility, requiring repayment of some or all of the amounts outstanding under its credit facility, (ii) lessee non-performance or non-compliance with lease obligations (which may affect credit line collateral limitations as well as revenue and expenses) and (iii) an unexpected deterioration of demand for aircraft equipment.

### (i) Operating activities

The Company's cash flow from operations for the nine months ended September 30, 2004 versus the nine months ended September 30, 2003 increased by approximately \$1,132,000. The change in cash flow is a result of changes in several cash flow items during the period, including principally the following:

#### Lease rents, maintenance reserves and security deposits

Although lease revenue was lower in the nine months ended September 30, 2004 versus the nine months ended September 30, 2003, lease rental collections were approximately \$470,000 higher in 2004, primarily as a result of cash payments received for rent deferred during 2003. It is expected that rental rates on aircraft to be re-leased will continue to decline, so that, absent additional acquisitions by the Company, aggregate lease revenues for the current portfolio can be expected to decline over the long term.

Payments received from lessees for maintenance reserves increased by approximately \$1,289,000 in the nine months ended September 30, 2004 versus the same period in 2003, reflecting principally an increase in usage by lessees of the aircraft that are owned and on lease by the Company and reserves received from the seller of the aircraft purchased by the Company in July 2004. Security deposits collected from lessees decreased by approximately \$125,000 in 2004 primarily as a result of deposits refunded to lessees at lease expiration or applied to past due amounts.

#### Expenditures for maintenance

Expenditures for maintenance were approximately \$78,000 more in the nine months ended September 30, 2004 than in the nine months ended September 30, 2003 primarily as a result of the payment of a portion of maintenance accruals recorded in 2003 in connection with the return of three aircraft from a lessee declared in default of its obligations.

#### Aircraft insurance

Expenditures for aircraft insurance increased by approximately \$220,000 during the nine months ended September 30, 2004 compared to the same period in 2003, primarily as a result of higher prepayments, which are based on the Company's estimated off-lease aircraft at the time of the policy's renewal in April of each year. Actual insurance expense depends on the aircraft which are off lease in any given period.

#### Expenditures for interest

Expenditures for interest expense increased by approximately \$191,000 in the

## Edgar Filing: AEROCENTURY CORP - Form 10QSB

nine months ended September 30, 2004 versus the nine months ended September 30, 2003, primarily as a result of changes in the Company's credit facility in the third quarter of 2003 and higher market interest rates. Interest expenditures in future periods will be a product of prevailing interest rates and the outstanding principal balance on financings, which may be influenced by future acquisitions and/or required repayments resulting from changes in the collateral base.

### Prepaid expenses

Expenditures for prepaid costs were approximately \$89,000 lower in 2004 than in 2003, primarily as a result of amounts paid in 2003 for equipment added to aircraft and capitalized in 2004.

### Income taxes

Current income tax payments decreased by approximately \$173,000, as a result of decreased taxable income, resulting from increased depreciation on aircraft acquired in 2004, increased interest deductions primarily as a result of higher average interest rates arising from changes in the Company's credit facility in the third quarter of 2003, and increased maintenance expense related to off-lease aircraft. In addition, decreased lease revenue during 2004 contributed to the decrease in taxable income. The effect of these items was partially offset by a decrease in bad debt expense from year to year.

### (ii) Investing activities

The increase in cash flow used for investing activities for the nine months ended September 30, 2004 versus the same period in 2003 was primarily due to the Company's purchase of aircraft in April and July 2004 versus no purchases in 2003.

### (iii) Financing activities

Although the Company borrowed \$5,200,000 on its credit facility to fund the purchase of four aircraft in April 2004, it also repaid approximately \$4,432,000 more of its outstanding debt in the nine months ended September 30, 2004 than it repaid in 2003, resulting in an increase in cash provided by financing activities of approximately \$768,000.

### Outlook

The Company continually monitors the financial condition of its lessees in order to minimize the likelihood of significant defaults. In particular, the Company is currently monitoring the performance of a lessee of two of the Company's aircraft. These leases were recently amended to remedy an arrearage of rent, which was paid during the third quarter, and to defer a portion of rent payments due during the second half of 2004 to the first half of 2005. Any further weakening in the aircraft industry may also affect the performance of lessees that currently appear creditworthy. See "Factors that May Affect Future Results - General Economic Conditions," below.

Although the Company purchased four aircraft in April 2004 and one aircraft in July 2004, additional acquisitions of leased assets will be necessary to offset the anticipated decreased lease rates which will result from the re-lease of the Company's current portfolio. The Company's banks have not yet approved the July

## Edgar Filing: AEROCENTURY CORP - Form 10QSB

transaction for inclusion of the purchased aircraft in the credit facility borrowing base. Until such approval, the Company's ability to borrow is more limited than it otherwise would be, which will affect the Company's results. The Company expects the lenders to reach a decision on this transaction in the first quarter of 2005.

In accordance with its periodic review of its portfolio of assets for impairment, the Company recorded a provision for impairment of approximately \$463,000 for one of its aircraft, based on the Company's cash flow analysis and third party appraisals. Any future adjustments, if necessary, would negatively affect the Company's financial results and the collateral available for the Company's credit facility. In addition, the Company's periodic review of the adequacy of its maintenance reserves, as well as routine and manufacturer-required maintenance for any off-lease aircraft, may result in changes to estimated maintenance expense, further reducing earnings.

Maintenance on one of the three aircraft which were returned early by a defaulted lessee was completed and the aircraft was delivered to a new lessee in the first quarter of 2004. Maintenance on one of the other two returned assets, both of which are DHC-7 aircraft, was completed in the third quarter of 2004 and the aircraft was sold. Maintenance on the second DHC-7 aircraft has begun and is expected to be complete in the fourth quarter of 2004. The Company believes that the aircraft, once ready, will be relatively difficult to remarket based on prior experience with this type of aircraft. Therefore, the Company anticipates that a substantial amount of time may pass before this aircraft returns to revenue-generating status. See "Factors that May Affect Future Results - Remarketing of Repossessed Dash 7 Aircraft," below.

As a result of depreciation and borrowing base restrictions with respect to aircraft having leases expiring in 2004 and early 2005, the Company may be required to make principal repayments under its credit facility. A focus of the Company, therefore, continues to be re-leasing aircraft that come off lease to limit the amount of any required repayment. Management believes that the Company will have sufficient cash to fund any required repayments resulting from scheduled lease expirations.

The former lessee of one of the Company's aircraft has signed a note in the amount of approximately \$625,000 for rent and maintenance in excess of the security deposit which was held by the Company. Previously, the Company had recorded a \$250,000 allowance against the amount receivable and believes this allowance is adequate to cover any shortfall in payment under the note.

### Factors that May Affect Future Results

Covenant Compliance in the Fourth Quarter. The Company was not in compliance with two financial covenants under the credit facility measured at September 30, 2004, relating to the Company's quarterly net loss and EBITDA-to-interest ratio. In the agreement renewing the credit facility entered into as of November 4, 2004, the lenders waived compliance with those covenants for the September 30 measurement. The Company will be required to be in compliance with all covenants as of December 31, 2004. While the Company believes its financial results for the fourth quarter will comply with applicable financial ratio covenants, there can be no assurance that the Company's assumptions relating to fourth quarter results will prove accurate. If the Company is not in compliance with the financial covenants in the credit facility, the lenders may declare the Company in default of the credit facility and accelerate all indebtedness under the facility. If this occurs, the Company would need to find replacement financing immediately, or if none were available, sell its assets to fund repayment of the accelerated debt. See, "Risks of Debt Financing", below.

## Edgar Filing: AEROCENTURY CORP - Form 10QSB

Term of Credit Facility. As discussed in "Liquidity and Capital Resources -- Credit Facility" above, the term of the credit facility was extended for one year, until October 31, 2005. The Company's longer term viability will depend upon its ability to renew the credit facility at its expiration with the existing or replacement lenders, or to refinance the credit facility using equity or alternative debt financing. There is no assurance that the Company will be able to achieve either alternative prior to the currently scheduled expiration of the credit line on October 31, 2005.

If the Company is not able to renew the credit facility for the full outstanding amount, and cannot find suitable alternative financing, it may be required to repay the outstanding balance, or that portion of the balance for which replacement financing is not obtained. The Company does not have sufficient cash reserves to make a repayment of a significant portion of the outstanding credit facility indebtedness and would be forced to sell assets in order to raise funds to make such repayment. Such sales would likely not be on favorable terms to the Company as the full market value of the assets sold may not be realized by the Company in order to expedite the consummation of the sales.

In any event, if a renewed or replacement facility is not obtained, the Company's future ability to acquire assets will be significantly impaired, as the credit facility is the Company's primary means of financing acquisitions and no other sources of acquisition financing are immediately available. Thus the renewal or replacement of the Company's credit line facility in an amount equal or greater than the current \$50 million limit will be critical to the Company's asset and revenue growth. The approval of the banks for the inclusion of the aircraft purchased by the Company in July 2004 in the credit facility collateral base will be a critical factor in the Company's ability to acquire additional assets in the short term. If such approval is not received, it is likely the Company will not be able to acquire any assets unless the credit facility is increased. See "Outlook," above.

Credit Facility Obligations. The Company is obligated to make repayment of principal under the credit facility in order to maintain certain debt ratios with respect to its assets in the borrowing base. Assets that come off lease and remain off-lease for a period of time are removed from the borrowing base. The Company believes it will have sufficient cash funds to make any payment that arises due to borrowing base limitations caused by assets scheduled to come off lease in the near term. The Company's belief is based on certain assumptions regarding renewal of existing leases, a lack of extraordinary interest rate increases, continuing GAAP profitability, no lessee defaults or bankruptcies, and certain other matters that the Company deems reasonable in light of its experience in the industry. There can be no assurance that the Company's assumptions will prove to be correct. If the assumptions are incorrect (for example, if an asset in the collateral base unexpectedly goes off lease for an extended period of time) and the Company has not obtained an applicable waiver or amendment of applicable covenants from its lenders to deal with the situation, the Company may have to sell a significant portion of its portfolio in order to maintain compliance with covenants or face default on its credit facility.

Factors that negatively affect the Company's GAAP profitability could in turn cause non-compliance by the Company with financial covenants of its credit facility. Unless the violated covenants are waived or amended, lenders could require the Company to make a principal repayment of the outstanding balance, or that portion of the balance for which replacement financing is not obtained. "Covenant Compliance in the Fourth Quarter"

Concentration of Lessees and Aircraft Type. The Company's four biggest customers now comprise approximately 60% of the Company's current monthly lease revenue. The lessees, doing business in Taiwan, Sweden, Indonesia and the US, constitute

## Edgar Filing: AEROCENTURY CORP - Form 10QSB

approximately 22%, 18%, 10% and 10% of the Company's monthly lease revenue, respectively. A lease default by or collection problems with one of these customers could have a disproportionate negative impact on the Company's financial results, and therefore, the Company's operating results will be especially sensitive to any negative developments with respect to these significant customers in terms of lease compliance or collection. Such concentration of lessee credit risk will diminish in the future only if the Company is able to lease additional assets to new lessees.

The acquisition of four Fokker 50 aircraft in April 2004 also makes this aircraft type the dominant aircraft in the portfolio, constituting 10 of the 25 aircraft in the portfolio. As a result, a change in the desirability and availability of Fokker 50 aircraft, which would in turn affect valuations of such aircraft, would have a disproportionately large impact on the Company's portfolio value. Such aircraft type concentration will diminish if the Company acquires additional assets of other types. Conversely, acquisition of additional Fokker 50 aircraft will increase the Company's risks related to its concentration of aircraft type.

**Increased Compliance Costs.** Due to new Sarbanes-Oxley requirements applicable to the Company by December 2005 relating to internal controls and auditors' responsibilities to review and opine on those controls, the Company anticipates that the fees and expenses in connection with audit services are likely to significantly increase. The increase will generally arise from increased auditor responsibilities as well as an increased scope of examination of the Company which will broaden to include the Company's internal controls. Audit fees are expected to increase by approximately 100% and there may be additional costs arising from mandated testing of internal controls that will begin to take place in 2005 and be performed on a continual basis thereafter. The Company does not have an exact figure on the increased costs, as this amount can only be determined as the Company proceeds further with its analysis of current internal controls. The Company, however, anticipates that it will have sufficient funds to pay for the increased compliance cost.

**Remarketing of Repossessed Dash 7 Aircraft.** In 2003, the Company repossessed two deHavilland DHC-7 aircraft, one of which was sold in July 2004. The remaining DHC-7 is a special purpose aircraft with short take-off and landing abilities, which makes it attractive to specific niche operators. Because it has four engines, however, it is relatively more expensive to operate than two-engine 50-passenger turboprop aircraft and, therefore, unattractive to operators who do not require the aircraft's special characteristics. Thus, it has been the Company's experience that the remarketing period for DHC-7 aircraft may be significantly longer than for other similar turboprop aircraft. Consequently, a significant amount of time may pass before the DHC-7 aircraft begins to generate cash flow and contribute to earnings for the Company either through a re-lease or sale of the aircraft.

**Risks of Debt Financing.** The Company's use of acquisition financing under its credit facility and its special purpose financings subject the Company to increased risks of leveraging. If, due to a lessee default, the Company is unable to repay the debt secured by the aircraft acquired, then the Company could lose title to the acquired aircraft in a foreclosure proceeding. With respect to the credit facility, the loans are secured by the Company's existing assets as well as the specific assets acquired with each financing. In addition to payment obligations, the credit facility also requires the Company to comply with certain financial covenants, including a requirement of positive quarterly earnings, interest coverage and net worth ratios. Any default under the credit facility, if not waived by the lenders, could result in foreclosure upon not only the asset acquired using such financing, but also the existing assets of

## Edgar Filing: AEROCENTURY CORP - Form 10QSB

the Company securing the loan.

General Economic Conditions. The Company's business is dependent upon general economic conditions and the strength of the travel and transportation industry. The industry recently experienced a severe cyclical downturn which began in 2001. This downturn was exacerbated by the terrorist attacks of September 11, 2001 and a reduction in airline passenger loads caused by Severe Acute Respiratory Syndrome ("SARS") in 2002. As a result, there was an overall significant reduction in air travel and less demand for aircraft capacity by the major air carriers. There are signs that the industry is beginning to recover from the downturn, but it is unclear whether any recovery will be a sustained one. Any recovery could be stalled or reversed by any number of events or circumstances, including the global economy slipping back into recession, or specific events related to the air travel industry, such as further weakening of the air carrier or travel industries as a result of terrorist attacks, or an increase in operational or labor costs. Recent spikes in oil prices, if they persist, may have a particularly deleterious effect on airline revenue and increase the likelihood of weakening results for airlines that have not hedged aircraft fuel costs, and in the most extreme cases, may initiate or accelerate the failure of many already marginal carriers.

Since regional carriers are generally not as well-capitalized as major air carriers, any economic setback in the industry may result in the increased possibility of an economic failure of one or more of the Company's lessees, particularly since many carriers are undertaking expansion of capacity to accommodate the recovering air passenger traffic. If lessees experience financial difficulties, this could, in turn, affect the Company's financial performance.

During any periods of economic contraction, carriers generally reduce capacity, in response to lower passenger loads, and as a result there is a reduced demand for aircraft and a corresponding decrease in market lease rental rates and aircraft values. This reduced market value for aircraft could affect the Company's results if the market value of an asset or assets in the Company's aircraft portfolio falls below book value, and the Company determines that a write-down of the value on the Company's balance sheet is appropriate. Furthermore, as older leases expire and are replaced by lease renewals or re-leases at decreasing lease rates, the lease revenue of the Company on its existing portfolio is likely to decline, with the magnitude of the decline dependent on the length of the downturn and the depth of the decline in market rents.

Economic downturns can affect specific regions of the world exclusively. As the Company's portfolio is not entirely globally diversified, a localized downturn in one of the key regions in which the Company leases aircraft (e.g., Europe or Asia) could have a significant adverse impact on the Company.

Interest Rate Risk. All of the Company's current credit facility indebtedness carries a floating interest rate based upon either the lender's prime rate or a floating LIBOR rate. Lease rates, generally, but not always, move with interest rates. Because lease rates are fixed at the origination of leases, interest rate increases during the term of a lease have no effect on existing lease payments. Therefore, if interest rates rise significantly, and there is relatively little lease origination by the Company following such rate increases, the Company could experience lower net earnings. The Company has not hedged its interest rate obligations. Consequently, if an interest rate increase were great enough, the Company might not be able to generate sufficient lease revenue to meet its interest payment and other obligations and comply with the net earnings covenant of its credit facility.

## Edgar Filing: AEROCENTURY CORP - Form 10QSB

**Leasing Risks.** The Company's successful negotiation of lease extensions, re-leases and sales may be critical to its ability to achieve its financial objectives, and involves a number of risks. Demand for lease or purchase of the assets depends on the economic condition of the airline industry which is, in turn, sensitive to general economic conditions. The ability to remarket equipment at acceptable rates may depend on the demand and market values at the time of remarketing. The Company anticipates that the bulk of the equipment it acquires will be used aircraft equipment. The market for used aircraft is cyclical, and generally reflects economic conditions and the strength of the travel and transportation industry. The demand for and value of many types of used aircraft in the recent past has been depressed by such factors as airline financial difficulties, increased fuel costs, the number of new aircraft on order and the number of aircraft coming off-lease. The Company's expected concentration in a limited number of airframe and aircraft engine types (generally, turboprop equipment) subjects the Company to economic risks if those airframe or engine types should decline in value. If "regional jets" were to be used on short routes previously served by turboprops, even though regional jets are more expensive to operate than turboprops, the demand for turboprops could lessen. This could result in lower lease rates and values for the Company's existing turboprop aircraft.

**Lessee Credit Risk.** If a customer defaults upon its lease obligations, the Company may be limited in its ability to enforce remedies. Most of the Company's lessees are small regional passenger airlines, which may be even more sensitive to airline industry market conditions than the major airlines. As a result, the Company's inability to collect rent under a lease or to repossess equipment in the event of a default by a lessee could have a material adverse effect on the Company's revenue. If a lessee that is a certified U.S. airline is in default under the lease and seeks protection under Chapter 11 of the United States Bankruptcy Code, Section 1110 of the Bankruptcy Code would automatically prevent the Company from exercising any remedies for a period of 60 days. After the 60-day period has passed, the lessee must agree to perform the obligations and cure any defaults, or the Company will have the right to repossess the equipment. This procedure under the Bankruptcy Code has been subject to significant recent litigation, however, and it is possible that the Company's enforcement rights may be further adversely affected by a declaration of bankruptcy by a defaulting lessee. Most of the Company's lessees are foreign and not subject to U.S. bankruptcy laws but there may be similar applicable foreign bankruptcy debtor protection schemes available to foreign carriers.

**Risks Related to Regional Air Carriers.** Because the Company has concentrated its existing leases and intends to concentrate on future leases to regional air carriers, it is subject to certain risks. Some of the lessees in the regional air carrier market are companies that are start-up, low capital, low margin operations. Often, the success of such carriers is dependent upon arrangements with major trunk carriers, which may be subject to termination or cancellation by such major carrier. These types of lessees result in a generally higher lease rate on aircraft, but may entail higher risk of default or lessee bankruptcy. The Company evaluates the credit risk of each lessee carefully, and attempts to obtain a third party guaranty, letters of credit or other credit enhancements, if it deems them necessary. There is no assurance, however, that such enhancements will be available or that if obtained they will fully protect the Company from losses resulting from a lessee default or bankruptcy. Also, a significant area of growth of this market is in areas outside of the United States, where collection and enforcement are often more difficult and complicated than in the United States.

**Reliance on JMC.** All management of the Company is performed by JMC under a

## Edgar Filing: AEROCENTURY CORP - Form 10QSB

management agreement which is in the seventh year of a 20-year term and provides for an asset-based management fee. JMC is not a fiduciary to the Company or its stockholders. The Company's Board of Directors has ultimate control and supervisory responsibility over all aspects of the Company and owes fiduciary duties to the Company and its stockholders. While JMC may not owe any fiduciary duties to the Company by virtue of the management agreement, the officers of JMC are also officers of the Company, and in that capacity owe fiduciary duties to the Company and the stockholders by virtue of holding such offices with the Company. In addition, certain officers of the Company hold significant ownership positions in JHC and the Company.

The JMC management agreement may be terminated if JMC defaults on its obligations to the Company. However, the agreement provides for liquidated damages in the event of its wrongful termination by the Company. All of the officers of JMC are also officers of the Company, and certain directors of the Company are also directors of JMC. Consequently, the directors and officers of JMC may have a conflict of interest in the event of a dispute between the Company and JMC. Although the Company has taken steps to prevent conflicts of interest arising from such dual roles, such conflicts may still occur.

JMC has acted as management company for two other aircraft portfolio owners, JetFleet III, which raised approximately \$13,000,000 from investors, and AeroCentury IV, Inc. ("AeroCentury IV"), which raised approximately \$5,000,000 from investors.

In the first quarter of 2002, AeroCentury IV defaulted on certain obligations to noteholders. In June 2002, the indenture trustee for AeroCentury IV's noteholders repossessed AeroCentury IV's assets and took over management of AeroCentury IV's remaining assets. JetFleet III defaulted on its Bond obligation of \$11,076,350 in May 2004. The indenture trustee for JetFleet III bondholders repossessed JetFleet III's unsold assets in late May 2004.

**Ownership Risks.** Most of the Company's portfolio is leased under operating leases, where the terms of the leases are less than the entire anticipated useful life of an asset. The Company's ability to recover its purchase investment in an asset subject to an operating lease is dependent upon the Company's ability to profitably re-lease or sell the asset after the expiration of the initial lease term. Some of the factors that have an impact on the Company's ability to re-lease or sell include worldwide economic conditions, general aircraft market conditions, regulatory changes that may make an asset's use more expensive or preclude use unless the asset is modified, changes in the supply or cost of aircraft equipment and technological developments which cause the asset to become obsolete. In addition, a successful investment in an asset subject to an operating lease depends in part upon having the asset returned by the lessee in serviceable condition as required under the lease. If the Company is unable to remarket its aircraft equipment on favorable terms when the operating leases for such equipment expire, the Company's business, financial condition, cash flow, ability to service debt and results of operations could be adversely affected.

Furthermore, during the ownership of an asset, an asset impairment charge against the Company's earnings may result from the occurrence of unexpected adverse changes that impact the Company's estimates of expected cash flows generated from such asset. The Company periodically reviews long-term assets for impairments, in particular, when events or changes in circumstances indicate the carrying value of an asset may not be recoverable. An impairment loss is recognized when the carrying amount of an asset is not recoverable and exceeds its fair value. The Company may be required to recognize asset impairment charges in the future as a result of the continued weak economic environment, challenging market conditions in the airline industry or events related to particular lessees, assets or asset types.

## Edgar Filing: AEROCENTURY CORP - Form 10QSB

**International Risks.** The Company has focused on leases in overseas markets, which the Company believes present opportunities. Leases with foreign lessees, however, may present somewhat different credit risks than those with domestic lessees.

Foreign laws, regulations and judicial procedures may be more or less protective of lessor rights than those which apply in the United States. The Company could experience collection or repossession problems related to the enforcement of its lease agreements under foreign local laws and the remedies in foreign jurisdictions. The protections potentially offered by Section 1110 of the Bankruptcy Code do not apply to non-U.S. carriers, and applicable local law may not offer similar protections. Certain countries do not have a central registration or recording system with which to locally establish the Company's interest in equipment and related leases. This could make it more difficult for the Company to recover an aircraft in the event of a default by a foreign lessee.

A lease with a foreign lessee is subject to risks related to the economy of the country or region in which such lessee is located, which may be weaker than the U.S. economy. On the other hand, a foreign economy may remain strong even though the U.S. economy does not. A foreign economic downturn may impact a foreign lessee's ability to make lease payments, even though the U.S. and other economies remain stable. Furthermore, foreign lessees are subject to risks related to currency conversion fluctuations. Although the Company's current leases are all payable in U.S. dollars, the Company may agree in the future to leases that permit payment in foreign currency, which would subject such lease revenue to monetary risk due to currency fluctuations. Even with U.S. dollar-denominated lease payment provisions, the Company could still be affected by a devaluation of the lessee's local currency that would make it more difficult for a lessee to meet its U.S. dollar-denominated lease payments, increasing the risk of default of that lessee, particularly if its revenue is primarily derived in the local currency.

**Government Regulation.** There are a number of areas in which government regulation may result in costs to the Company. These include aircraft registration, safety requirements, required equipment modifications, and aircraft noise requirements. Although it is contemplated that the burden and cost of complying with such requirements will fall primarily upon lessees of equipment, there can be no assurance that the cost will not fall on the Company. Furthermore, future government regulations could cause the value of any non-complying equipment owned by the Company to decline substantially.

**Competition.** The aircraft leasing industry is highly competitive. The Company competes with aircraft manufacturers, distributors, airlines and other operators, equipment managers, leasing companies, equipment leasing programs, financial institutions and other parties engaged in leasing, managing or remarketing aircraft, many of which have significantly greater financial resources and more experience than the Company. However, the Company believes that it is competitive because of JMC's experience and operational efficiency in identifying and obtaining financing for the transaction types desired by regional air carriers. This market segment, which is characterized by transaction sizes of less than \$10 million and lessee credits that may be strong, but are generally unrated, is not well served by the Company's larger competitors in the aircraft industry. JMC has developed a reputation as a global participant in this segment of the market, and the Company believes that JMC's reputation will benefit the Company. There is, however, no assurance that the lack of significant competition from the larger aircraft leasing companies will continue or that the reputation of JMC will continue to be strong in this market segment.

## Edgar Filing: AEROCENTURY CORP - Form 10QSB

Casualties, Insurance Coverage. The Company, as owner of transportation equipment, may be named in a suit claiming damages for injuries or damage to property caused by its assets. As a triple net lessor, the Company is generally protected against such claims, since the lessee would be responsible for, insure against and indemnify the Company for, such claims. Further, some protection may be provided by the United States Aviation Act with respect to the Company's aircraft assets. It is, however, not clear to what extent such statutory protection would be available to the Company, and the United States Aviation Act may not apply to aircraft operated in foreign countries. Also, although the Company's leases generally require a lessee to insure against likely risks, there may be certain cases where the loss is not entirely covered by the lessee or its insurance. Though this is a remote possibility, an uninsured loss with respect to the equipment, or an insured loss for which insurance proceeds are inadequate, would result in a possible loss of invested capital in and any profits anticipated from, such equipment, as well as a potential claim directly against the Company.

Possible Volatility of Stock Price. The market price of the Company's common stock could be subject to fluctuations in response to the Company's operating results, changes in general conditions in the economy, the financial markets, the airline industry, changes in accounting principles or tax laws applicable to the Company or its lessees, or other developments affecting the Company, its customers or its competitors, some of which may be unrelated to the Company's performance. Also, because the Company has a relatively small capitalization of approximately 1.5 million shares, there is a correspondingly limited amount of trading of the Company's shares. Consequently, a single or small number of trades could result in a market fluctuation not related to any business or financial development concerning the Company.

### Item 3. Controls and Procedures

Quarterly evaluation of the Company's Disclosure Controls and Internal Controls. As of the end of the period covered by this report, the Company evaluated the effectiveness of the design and operation of its "disclosure controls and procedures" ("Disclosure Controls"), and its "internal controls over financial reporting" ("Internal Controls"). This evaluation (the "Controls Evaluation") was done under the supervision and with the participation of management, including the Company's Chief Executive Officer ("CEO") and Chief Financial Officer ("CFO"). Rules adopted by the SEC require that in this section of the Report the Company present the conclusions of the CEO and the CFO about the effectiveness of our Disclosure Controls and Internal Controls based on and as of the date of the Controls Evaluation.

CEO and CFO Certifications. Attached as exhibits to this report are two separate forms of "Certifications" of the CEO and the CFO. The first form of Certification is required in accordance with Section 302 of the Sarbanes-Oxley Act of 2002 (the "Section 302 Certification"). This section of the report which you are currently reading is the information concerning the Controls Evaluation referred to in the Section 302 Certifications and this information should be read in conjunction with the Section 302 Certifications for a more complete understanding of the topics presented.

Disclosure Controls and Internal Controls. Disclosure Controls are procedures that are designed with the objective of ensuring that information required to be disclosed in the Company's reports filed under the Securities Exchange Act of 1934 (the "Exchange Act"), such as this report, is recorded, processed, summarized and reported within the time periods specified in the Securities and Exchange Commission's ("SEC") rules and forms. Disclosure Controls are also

## Edgar Filing: AEROCENTURY CORP - Form 10QSB

designed with the objective of ensuring that such information is accumulated and communicated to the Company's management, including the CEO and CFO, as appropriate to allow timely decisions regarding required disclosure. Internal Controls are procedures which are designed with the objective of providing reasonable assurance that (1) the Company's transactions are properly authorized; (2) the Company's assets are safeguarded against unauthorized or improper use; and (3) the Company's transactions are properly recorded and reported, all to permit the preparation of the Company's consolidated financial statements in conformity with generally accepted accounting principles.

Limitations on the Effectiveness of Controls. The Company's management, including the CEO and CFO, does not expect that its Disclosure Controls or its Internal Controls will prevent all errors and all fraud. A control system, no matter how well conceived and operated, can provide only reasonable, not absolute, assurance that the objectives of the control system are met. Further, the design of a control system must reflect the fact that there are resource constraints, and the benefits of controls must be considered relative to their costs. Because of the inherent limitations in all control systems, no evaluation of controls can provide absolute assurance that all control issues and instances of fraud, if any, within the Company have been detected. These inherent limitations include the realities that judgments in decision-making can be faulty, and that breakdowns can occur because of simple error or mistake. Additionally, controls can be circumvented by the individual acts of some persons, by collusion of two or more people, or by management override of the control. The design of any system of controls also is based in part upon certain assumptions about the likelihood of future events, and there can be no assurance that any design will succeed in achieving its stated goals under all potential future conditions; over time, control may become inadequate because of changes in conditions, or the degree of compliance with the policies or procedures may deteriorate. Because of the inherent limitations in a cost-effective control system, misstatements due to error or fraud may occur and not be detected.

Scope of the Controls Evaluation. The CEO/CFO evaluation of the Company's Disclosure Controls and the Company's Internal Controls included a review of the controls objectives and design, the controls implementation by the Company and the effect of the controls on the information generated for use in this report. In the course of the Controls Evaluation, we sought to identify data errors, controls problems or acts of fraud and to confirm that appropriate corrective action, including process improvements, were being undertaken. This type of evaluation will be done on a quarterly basis so that the conclusions concerning controls effectiveness can be reported in the Company's quarterly reports on Form 10-QSB and annual report on Form 10-KSB. The Company's Internal Controls are also evaluated on an ongoing basis by other personnel in the Company's finance organization and by the Company's independent auditors in connection with their audit and review activities. The overall goals of these various evaluation activities are to monitor the Company's Disclosure Controls and the Company's Internal Controls and to make modifications as necessary; the Company's intent in this regard is that the Disclosure Controls and the Internal Controls will be maintained as dynamic systems that change (including with improvements and corrections) as conditions warrant.

Among other matters, the Company sought in its evaluation to determine whether there were any "significant deficiencies" or "material weaknesses" in the Company's Internal Controls, or whether the Company had identified any acts of fraud involving personnel who have a significant role in the Company's Internal Controls. This information was important both for the Controls Evaluation generally and because item 5 in the Section 302 Certifications of the CEO and CFO require that the CEO and CFO disclose that information to the Audit Committee of the Company's Board and to the Company's independent auditors and

## Edgar Filing: AEROCENTURY CORP - Form 10QSB

to report on related matters in this section of the report. In the professional auditing literature, "significant deficiencies" are referred to as "reportable conditions"; these are control issues that could have a significant adverse effect on the ability to record, process, summarize and report financial data in the financial statements. A "material weakness" is defined in the auditing literature as a particularly serious reportable condition where the internal control does not reduce to a relatively low level the risk that misstatements caused by error or fraud may occur in amounts that would be material in relation to the financial statements and not be detected within a timely period by employees in the normal course of performing their assigned functions. The Company also sought to deal with other controls matters in the Controls Evaluation, and in each case if a problem was identified, the Company considered what revision, improvement and/or correction to make in accordance with our ongoing procedures.

In accordance with SEC requirements, the CEO and CFO note that, there has been no significant change in Internal Controls that occurred during our most recent fiscal quarter that has materially affected or is reasonably likely to materially affect our Internal Controls.

Conclusions. Based upon the Controls Evaluation, the Company's CEO and CFO have concluded that, subject to the limitations noted above, the Company's Disclosure Controls are effective to ensure that material information relating to the Company and its consolidated subsidiaries is made known to management, including the CEO and CFO, particularly during the period when periodic reports are being prepared, and that the Company's Internal Controls are effective to provide reasonable assurance that the Company's consolidated financial statements are fairly presented in conformity with generally accepted accounting principles.

### PART II OTHER Information

Items 1, 2, 3, 4 and 5 have been omitted as they are not applicable.

#### Item 6. Exhibits

##### Exhibits

| Exhibit<br>Number | Description   |
|-------------------|---|
| 31.1              | Certification of Neal D. Crispin, Chief Executive Officer, pursuant to Section 302 of the Sarbanes-Oxley Act of 2002. |
| 31.2              | Certification of Toni M. Perazzo, Chief Financial Officer, pursuant to Section 302 of the Sarbanes-Oxley Act of 2002. |
| 32.1*             | Certification of Neal D. Crispin, Chief Executive Officer, pursuant to Section 906 of the Sarbanes-Oxley Act of 2002. |
| 32.2*             | Certification of Toni M. Perazzo, Chief Financial Officer, pursuant to Section 906 of the Sarbanes-Oxley Act of 2002. |

\* These certificates are furnished to, but shall not be deemed to be filed with, the Securities and Exchange Commission ("SEC").
