Price Stabilization and Short Positions

Until the distribution of the shares is completed, Securities and Exchange Commission rules may limit the ability of the underwriter and selling group members from bidding for and purchasing our Class A common stock. However, the underwriter may engage in transactions that stabilize the price of our Class A common stock, such as bids or purchases to peg, fix or maintain that price.

If the underwriter creates a short position in the Class A common stock in connection with the offering, i.e., if it sells more shares than are listed on the cover of this prospectus supplement, the underwriter may also elect to reduce any short position by purchasing shares in the open market. Purchases of the Class A common stock to stabilize its price or to reduce a short position may cause the price of the Class A common stock to be higher than it might be in the absence of such purchases.

Neither we nor the underwriter makes any representation or prediction as to the direction or magnitude of any effect that the transactions described above may have on the price of our Class A common stock. In addition, neither we nor the underwriter makes any representation that the underwriter will engage in these transactions or that these transactions, once commenced, will not be discontinued without notice.
