## PART I

## **ITEM 1. BUSINESS**

The disclosures set forth in this item are qualified by ITEM 1A. RISK FACTORS on pages 17 27 and the section captioned FORWARD-LOOKING STATEMENTS AND FACTORS THAT COULD AFFECT FUTURE RESULTS on page 32 and other cautionary statements set forth elsewhere in this report.

Sterling Bancorp (the parent company or the Registrant ) is a bank holding company and a financial holding company as defined by the Bank Holding Company Act of 1956, as amended (the BHCA ), which was organized in 1966. Sterling Bancorp and its subsidiaries derive substantially all of their revenue and income from providing banking and related financial services and products to customers primarily in New York, New Jersey and Connecticut ( the New York metropolitan area ). Throughout this report, the terms the Company or Sterling refer to Sterling Bancorp and its subsidiaries. The Company has operations in the New York metropolitan area and conducts business throughout the United States.

The parent company owns, directly or indirectly, all of the outstanding shares of Sterling National Bank (the bank ), its principal subsidiary, and all of the outstanding shares of Sterling Banking Corporation and Sterling Bancorp Trust I (the trust ). Sterling National Mortgage Company, Inc. (SNMC), Sterling Factors Corporation (Factors), Sterling Trade Services, Inc. (Trade Services), Sterling Resource Funding Corp. (Resource Funding ) and Sterling Real Estate Holding Company, Inc. are wholly-owned subsidiaries of the bank.

On April 3, 2009, Factors, a subsidiary of the bank, acquired substantially all of the assets and customer lists of DCD Capital, LLC and DCD Trade Services, LLC. The acquired assets and customer lists are now operating as a division of Factors under the name Sterling Trade Capital.

In September 2006, the Company sold the business conducted by Sterling Financial Services (Sterling Financial). In accordance with U.S. GAAP, the assets, liabilities and earnings/loss of the business conducted by Sterling Financial have been shown separately as discontinued operations.

For purposes of the following discussion, average balances, averages rates, income and expenses associated with Sterling Financial have been excluded from continuing operations and reported separately for all periods presented.

Segment information appears in Note 25 of the Company s consolidated financial statements.

#### **BUSINESS OPERATIONS**

#### The Bank

Sterling National Bank was organized in 1929 under the National Bank Act and commenced operations in New York City. The bank maintains twelve offices in New York: nine offices in New York City (six branches and an international banking facility in Manhattan and three branches in Queens); two branches in Nassau County (one in Great Neck and the other in Woodbury, New York) and one branch in Yonkers, New York. The executive office is located at 650 Fifth Avenue, New York, New York.

The bank provides a broad range of banking and financial products and services, including business and consumer lending, asset-based financing, factoring/accounts receivable management services, equipment financing, commercial and residential mortgage lending and brokerage, deposit services, and trade financing.

For the year ended December 31, 2010, the bank s average earning assets represented approximately 98.3% of the Company s average earning assets. Loans represented 61.2% and investment securities represented 36.8% of the bank s average earning assets in 2010.

*Commercial Lending, Asset-Based Financing and Factoring/Accounts Receivable Management.* The bank provides loans to small and medium-sized businesses. The businesses are diversified across industries, including commercial, industrial and financial companies, and government and non-profit entities. Loans generally range in size up to \$20 million and can be tailored to meet customers specific long- and short-term needs, and include secured and unsecured lines of credit, business installment loans, business lines of credit, and debtor-in-possession financing. Loans are often collateralized by assets, such as accounts receivable, inventory, marketable securities, other liquid collateral, equipment and other assets.

Through its factoring subsidiary, Factors, the bank provides accounts receivable management services. The purchase of a client s accounts receivable is traditionally known as factoring and results in payment by the client of a nonrefundable factoring fee, which is generally a percentage of the factored receivables or sales volume and is designed to compensate for the bookkeeping and collection services provided by Factors and, if applicable, its credit review of the client s customer and assumption of customer credit risk. When Factors factors (*i.e.*, purchases)

an account receivable from a client, it records the receivable as an asset (included in Loans held in portfolio, net of unearned discounts ), records a liability for the funds due to the client (included in Accrued expenses and other liabilities ) and credits to noninterest income the nonrefundable

factoring fee (included in Accounts receivable management/factoring commissions and other fees ). Factors also may advance funds to its client prior to the collection of receivables, charging interest on such advances (in addition to any factoring fees) and normally satisfying such advances by the collection of receivables. The accounts receivable factored are primarily for clients engaged in the apparel and textile industries.

Through a subsidiary, Sterling Resource Funding Corp., the bank provides financing and human resource business process outsourcing support services, exclusively for the temporary staffing industry. For over 25 years and throughout the United States, Resource Funding has provided full back-office, computer, tax and accounting services, as well as financing, to independently-owned staffing companies. The average contract term is 18 months for approximately 200 staffing companies.

As of December 31, 2010, the outstanding loan balance (net of unearned discounts) for commercial and industrial lending and factored receivables was \$755.5 million, representing approximately 56.8% of the bank s total loan portfolio.

There are no industry concentrations in the commercial and industrial loan portfolio that exceed 10% of gross loans. Approximately 69% of the bank s loans are to borrowers located in the New York metropolitan area. The bank has no foreign loans.

*Equipment Financing.* The bank offers equipment financing services in the New York metropolitan area and across the United States through direct leasing programs, third party sources and vendor programs. The bank finances full payout leases for various types of business equipment, written on a recourse basis with personal guarantees of the principals, with terms generally ranging from 24 to 60 months. At December 31, 2010, the outstanding balance (net of unearned discounts) for equipment financing receivables was \$144.2 million, with a remaining average term of 35 months, representing approximately 10.8% of the bank s total loan portfolio.

*Residential and Commercial Mortgages.* The bank s real estate loan portfolio consists of real estate loans on one-to-four family residential properties, multi-family residential properties and nonresidential commercial properties. The residential mortgage banking and brokerage business is conducted through offices located principally in New York. Residential mortgage loans, substantially all of which are for single family residences, are focused on conforming credit, government insured FHA and other high quality loan products and are originated primarily in the New York metropolitan area, Virginia and other mid-Atlantic states, almost all of these for resale. In addition, the Company retains in portfolio fixed and floating rate residential mortgage loans, primarily on properties located in the New York metropolitan area, which were originated by its mortgage banking subsidiary. Commercial real estate lending, including financing on multi-family residential properties and nonresidential commercial properties, is offered on income-producing investor properties and owner-occupied properties, professional co-ops and condos. At December 31, 2010, the outstanding loan balance for real estate mortgage loans was \$256.7 million, representing approximately 19.3% of the bank s total loans outstanding.

*Deposit Services.* The bank attracts deposits from customers located primarily in the New York metropolitan area, offering a broad array of deposit products, including checking accounts, money market accounts, negotiable order of withdrawal (NOW) accounts, savings accounts, rent security accounts, retirement accounts, and certificates of deposit. The bank s deposit services include account management and information, disbursement, reconciliation, collection and concentration, ACH and others designed for specific business purposes. The deposits of the bank are insured to the extent permitted by law pursuant to the Federal Deposit Insurance Act, as amended.

*Trade Finance.* Through its international division and international banking facility, the bank offers financial services to its customers and correspondents in the world s major financial centers. These services consist of financing import and export transactions, issuing letters of credit, processing documentary collections and creating banker s acceptances. In addition, active bank account relationships are maintained with leading foreign banking institutions in major financial centers.

Foreign activities of the Company are not considered to be material with predominantly all revenues and assets attributable to customers located in the United States. As of December 31, 2010, there were no loans to or deposits from customers located outside the United States.

The composition of total revenues (interest income and non-interest income) of the bank and its subsidiaries for the three most recent fiscal years was as follows:

Years Ended December 31,		2009	2008
Interest and fees on loans	49%	48%	53%
Interest and dividends on investment securities		22	24
Noninterest income	33	29	22
Other		1	1
		1	1
	100%	100%	100%

At December 31, 2010, the bank and its subsidiaries had 558 full-time equivalent employees, consisting of 231 officers and

327 supervisory and clerical employees. The bank considers its relations with its employees to be satisfactory.

## COMPETITION

There is intense competition in all areas in which the Company conducts its business. As a result of the deregulation of the financial services industry under the Gramm-Leach-Bliley Act of 1999, the Company competes with banks and other financial institutions, including savings and loan associations, savings banks, finance companies, and credit unions. Many of these competitors have substantially greater resources and may have higher lending limits and provide a wider array of banking services than the Company does. To a limited extent, the Company also competes with other providers of financial services, such as money market mutual funds, brokerage firms, consumer finance companies and insurance companies. The Company generally competes on the basis of level of customer service, responsiveness to customer needs, availability and pricing of products, and geographic location.

## SUPERVISION AND REGULATION

## General

The banking industry is highly regulated. Statutory and regulatory controls are designed primarily for the protection of depositors and the banking system, and not for the purpose of protecting the shareholders of the parent company. The following discussion is not intended to be a complete list of all the activities regulated by the banking laws or of the impact of such laws and regulations on the bank and the Company. It is intended only to briefly summarize some material provisions. Changes in applicable law or regulation, and in their interpretation and application by regulatory agencies, cannot be predicted, but they may have a material effect on the business and results of the Company.

Sterling is a bank holding company and a financial holding company under the BHCA and is subject to supervision, examination and reporting requirements of the Federal Reserve Board. Sterling is also subject to the disclosure and regulatory requirements of the Securities Act of 1933, as amended, and the Securities Exchange Act of 1934, as amended, as administered by the Securities and Exchange Commission (the SEC). Sterling Bancorp is listed on the New York Stock Exchange (NYSE) under the trading symbol STL and is subject to the rules of the NYSE for listed companies.

As a national bank, the bank is principally subject to the supervision, examination and reporting requirements of the Office of the Comptroller of the Currency (the OCC), as well as the Federal Deposit Insurance Corporation (the FDIC). Insured banks, including the bank, are subject to extensive regulation of many aspects of their business. These regulations relate to, among other things: (a) the nature and amount of loans that may be made by the bank and the rates of interest that may be charged; (b) types and amounts of other investments; (c) branching; (d) permissible activities; (e) reserve requirements; and (f) dealings with officers, directors and affiliates.

Sterling Banking Corporation is subject to supervision and regulation by the Banking Department of the State of New York.

## Bank Holding Company Regulation

The BHCA requires the prior approval of the Federal Reserve Board for the acquisition by a bank holding company of 5% or more of the voting stock or substantially all of the assets of any bank or bank holding company. Also, under the BHCA, bank holding companies are prohibited, with certain exceptions, from engaging in, or from acquiring 5% or more of the voting stock of any company engaging in, activities other than (1) banking or managing or controlling banks, (2) furnishing services to or performing services for their subsidiaries, or (3) activities that the Federal Reserve Board has determined to be so closely related to banking or managing or controlling banks as to be a proper incident thereto.

As discussed below under Financial Holding Company Regulation, the Gramm-Leach-Bliley Act of 1999 amended the BHCA to permit a broader range of activities for bank holding companies that qualify as financial holding companies.

## Financial Holding Company Regulation

The Gramm-Leach-Bliley Act:

allows bank holding companies, the depository institution subsidiaries of which meet management, capital and the Community Reinvestment Act (the CRA) standards, to engage in a substantially broader range of non-banking financial activities than was previously permissible, including (a) insurance underwriting and agency, (b) making merchant banking investments in commercial companies, (c) securities underwriting, dealing and market making, and (d) sponsoring mutual funds and investment companies;

allows insurers and other financial services companies to acquire banks; and

establishes the overall regulatory structure applicable to bank holding companies that also engage in insurance and securities operations. In order for a bank holding company to engage in the broader range of activities that are permitted by the Gramm-Leach-Bliley Act, (1) all of its depository subsidiaries must be and remain well capitalized and well managed and have received at least a satisfactory CRA rating, and (2) it must file a declaration with the Federal Reserve Board that it elects to be a financial holding company.

Requirements and standards to remain well capitalized are discussed below. To maintain financial holding company status, the bank must have at least a satisfactory rating under the CRA. Under the CRA, during examinations of the bank, the OCC is required to assess the bank s record of meeting the credit needs of the communities serviced by the bank, including low- and moderate-income communities. Banks are given one of four ratings under the CRA: outstanding, satisfactory, needs to improve or substantial non-compliance. The bank received a rating of outstand on the most recent exam completed by the OCC.

Pursuant to an election made under the Gramm-Leach-Bliley Act, the parent company has been designated as a financial holding company. As a financial holding company, Sterling may conduct, or acquire a company (other than a U.S. depository institution or foreign bank) engaged in, activities that are financial in nature, as well as additional activities that the Federal Reserve Board determines (in the case of incidental activities, in conjunction with the United States Department of the Treasury (the U.S. Treasury ) are incidental or complementary to financial activities, without the prior approval of the Federal Reserve Board. Under the Gramm-Leach-Bliley Act, activities that are financial in nature include insurance, securities underwriting and dealing, merchant banking, and sponsoring mutual funds and investment companies. Under the merchant banking authority added by the Gramm-Leach-Bliley Act, financial holding companies may invest in companies that engage in activities that are not otherwise permissible financial activities, subject to certain limitations, including that the financial holding company makes the investment with the intention of limiting the investment duration and does not manage the company on a day-to-day basis.

Generally, financial holding companies must continue to meet all the requirements for financial holding company status in order to maintain the ability to undertake new activities or acquisitions that are financial in nature and the ability to continue those activities that are not generally permissible for bank holding companies. If the parent company ceases to so qualify, it would be required to obtain the prior approval of the Federal Reserve Board to engage in non-banking activities or to acquire more than 5% of the voting stock of any company that is engaged in non-banking activities. With certain exceptions, the Federal Reserve Board can only provide prior approval to applications involving activities that it had previously determined, by regulation or order, are so closely related to banking as to be properly incident thereto. Such activities are more limited than the range of activities that are deemed financial in nature.

## Dodd - Frank Act

On July 21, 2010, President Obama signed into law the Dodd-Frank Act. The Dodd-Frank Act has already resulted, and will continue to result, in sweeping changes in the regulation of financial institutions aimed at strengthening the sound operation of the financial services sector. The Dodd-Frank Act s provisions that have received the most public attention generally have been those applying to or more likely to affect larger institutions. However, it contains numerous other provisions that will affect all banks and bank holding companies, identified below. The Dodd-Frank Act includes provisions that, among other things:

Centralize responsibility for consumer financial protection by creating a new agency, the Consumer Financial Protection Bureau, responsible for implementing, examining and enforcing compliance with federal consumer financial laws.

Restrict the preemption of state law by federal law and disallow subsidiaries and affiliates of national banks, such as the bank, from availing themselves of such preemption.

Apply the same leverage and risk-based capital requirements that apply to insured depository institutions to most bank holding companies.

Require the OCC to seek to make its capital requirements for national banks, such as Sterling National Bank, counter-cyclical so that capital requirements increase in times of economic expansion and decrease in times of economic contraction.

Require financial holding companies, such as the parent company, to be well capitalized and well managed as of July 21, 2011. Bank holding companies and banks must also be both well capitalized and well managed in order to acquire banks located outside their home state.

Implement corporate governance revisions, including with regard to executive compensation and proxy access by shareholders, that apply to all public companies, not just financial institutions.

Make permanent the \$250 thousand limit for federal deposit insurance and increase the cash limit of Securities Investor Protection Corporation protection from \$100 thousand to \$250 thousand and provide unlimited federal deposit insurance until December 31, 2012 for non-interest bearing demand transaction accounts at all insured depository institutions.

Repeal the federal prohibitions on the payment of interest on demand deposits, thereby permitting depository institutions to pay interest on business transaction and other accounts.

Increase the authority of the Federal Reserve to examine the Company and its non-bank subsidiaries. Some of these provisions may have the consequence of increasing our expenses, decreasing our revenues, and changing the activities in which we choose to engage. The environment in which banking organizations will operate after the

financial crisis, including legislative and regulatory changes affecting capital, liquidity, supervision, permissible activities, corporate governance and compensation, changes in fiscal policy and steps to eliminate government support for banking organizations, may have long-term effects on the business model and profitability of banking organizations that cannot now be foreseen. The specific impact of the Dodd-Frank Act on our current activities or new financial activities we may consider in the future, our financial performance and the markets in which we operate will depend on the manner in which the relevant agencies develop and implement the required rules and the reaction of market participants to these regulatory developments. Many aspects of the Dodd-Frank Act are subject to rulemaking and will take effect over several years, making it difficult to anticipate the overall financial impact on the Company, its customers or the financial industry more generally.

## Payment of Dividends

The parent company depends for its cash requirements on funds maintained or generated by its subsidiaries, principally the bank.

Various legal restrictions limit the extent to which the bank can fund the parent company and its nonbank subsidiaries. All national banks are limited in the payment of dividends without the approval of the OCC to an amount not to exceed the net profits (as defined) for that year-to-date combined with its retained net profits for the preceding two calendar years, less any required transfers to surplus. Federal law also prohibits national banks from paying dividends that would be greater than the bank s undivided profits after deducting statutory bad debt in excess of the bank s allowance for loan losses. Under the foregoing restrictions, and while maintaining its well capitalized status, as of December 31, 2010, the bank could pay dividends of approximately \$32.3 million to the parent company, without obtaining regulatory approval. This is not necessarily indicative of amounts that may be paid or are available to be paid in future periods.

Under the Federal Deposit Insurance Corporation Improvement Act of 1991 (FDICIA), a depository institution, such as the bank, may not pay dividends if payment would cause it to become undercapitalized or if it is already undercapitalized. The payment of dividends by the parent company and the bank may also be affected or limited by other factors, such as the requirement to maintain adequate capital. The appropriate federal regulatory authority is authorized to determine under certain circumstances relating to the financial condition of a bank holding company or a bank that the payment of dividends would be an unsafe or unsound practice and to prohibit payment thereof. The appropriate federal regulatory authorities have indicated that paying dividends that deplete a bank s capital base to an inadequate level would be an unsafe and unsound banking practice and that banking organizations should generally pay dividends only out of current operating earnings. In addition, in the current financial and economic environment, the Federal Reserve Board has indicated that bank holding companies should carefully review their dividend policy and has discouraged payment ratios that are at maximum allowable levels unless both asset quality and capital are very strong.

On December 23, 2008, the parent company issued Fixed Rate Cumulative Perpetual Preferred Shares Series A, liquidation preference of \$1,000 per share (the Series A Preferred Shares ), to the U.S. Treasury as a participant in the Capital Purchase Program under the Troubled Asset Repurchase Program (TARP). Under the terms of a letter agreement the parent company executed in connection with the preferred shares issuance, prior to December 23, 2011, unless the parent company has redeemed all such preferred shares or the U.S. Treasury has transferred all such preferred shares to a third party, the consent of the U.S. Treasury will be required for the parent company to increase the dividend on its common shares above a quarterly cash dividend of \$0.19 per share.

For a discussion of additional restrictions on the parent company s ability to pay dividends, see Emergency Economic Stabilization Act of 2008 beginning on page 10.

## Transactions with Affiliates

Federal laws strictly limit the ability of banks to engage in transactions with their affiliates, including their bank holding companies. Regulations promulgated by the Federal Reserve Board limit the types and amounts of these transactions (including loans due and extensions of credit from their U.S. bank subsidiaries) that may take place and generally require those transactions to be on an arm s-length basis. In general, these regulations require that any covered transactions between a subsidiary bank and its parent company or the non-bank subsidiaries of the bank holding company are limited to 10% of a bank subsidiary s capital and surplus and, with respect to such parent company and all such nonbank subsidiaries, to an aggregate of 20% of the bank subsidiary s capital and surplus. Further, loans and extensions of credit generally are required to be secured by eligible collateral in specified amounts. The Dodd-Frank Act significantly expands the coverage and scope of the limitations on affiliate transactions within a banking organization. For example, commencing in July 2011, the Dodd-Frank Act will require that the 10% of capital limit on these transactions begin to apply to financial subsidiaries as well. Covered transactions are defined by statute to include a loan or extension of credit, as well as a purchase of securities issued by an affiliate, a purchase of assets (unless otherwise exempted by the Federal Reserve Board) from the affiliate, the acceptance of securities issued by

the affiliate as collateral for a loan, and the issuance of a guarantee, acceptance or letter of credit on behalf of an affiliate.

Federal law also limits a bank s authority to extend credit to its directors, executive officers and 10% shareholders, as well as to entities controlled by such persons. Among other things, extensions of credit to insiders are required to be made on terms that are substantially the same as, and follow credit underwriting procedures that are not less stringent than, those prevailing for comparable transactions with unaffiliated persons. Also, the terms of such extensions of credit may not involve more than the normal risk of repayment or present other unfavorable features and may not exceed certain limitations on the amount of credit extended to such persons, individually and in the aggregate, which limits are based, in part, on the amount of the bank s capital.

Banks are subject to prohibitions on certain tying arrangements. A depository institution is prohibited, subject to some exceptions, from extending credit to or offering any other service, or fixing or varying the consideration for such extension of credit or service, on the condition that the customer obtain some additional service from the institution or its affiliates or not obtain services of a competitor of the institution.

## Capital Adequacy

As a bank holding company, we are subject to consolidated regulatory capital requirements administered by the Federal Reserve Board. The bank is subject to similar capital requirements administered by the OCC. The federal regulatory authorities risk-based capital guidelines are based upon the 1988 capital accord (Basel I) of the Basel Committee. The Basel Committee is a committee of central banks and bank supervisors/regulators from the major industrialized countries that develops broad policy guidelines for use by each country s supervisors in determining the supervisory policies they apply. The requirements are intended to ensure that banking organizations have adequate capital given the risk levels of assets and off-balance sheet financial instruments. Under the requirements, banking organizations are required to maintain minimum ratios for Tier 1 capital and total capital to risk-weighted assets (including certain off-balance sheet items, such as letters of credit). For purposes of calculating the ratios, a banking organization s assets and some of its specified off-balance sheet commitments and obligations are assigned to various risk categories. A depository institution s or holding company s capital, in turn, is classified in tiers, depending on type:

*Core Capital (Tier 1).* Currently, Tier 1 capital includes common equity, retained earnings, qualifying non-cumulative perpetual preferred stock, a limited amount of qualifying cumulative perpetual stock at the holding company level, minority interests in equity accounts of consolidated subsidiaries, less goodwill, most intangible assets and certain other assets.

*Supplementary Capital (Tier 2).* Currently, Tier 2 capital includes, among other things, perpetual preferred stock not meeting the Tier 1 definition, qualifying mandatory convertible debt securities, qualifying subordinated debt, and allowances for loan and lease losses, subject to limitations.

As a bank holding company, Sterling is currently required to maintain Tier 1 capital and total capital (the sum of Tier 1 and Tier 2 capital) equal to at least 4.0% and 8.0%, respectively, of its total risk-weighted assets (including various off-balance-sheet items, such as standby letters of credit). National banks are required to maintain similar capital levels under capital adequacy guidelines. For a depository institution to be considered well capitalized under the regulatory framework for prompt corrective action, its Tier 1 and total capital ratios must be at least 6.0% and 10.0% on a risk-adjusted basis, respectively. The elements currently comprising Tier 1 capital and Tier 2 capital and the minimum Tier 1 capital and total capital ratios may in the future be subject to change, as discussed in greater detail below.

Bank holding companies and banks are also required to comply with minimum leverage ratio requirements. The leverage ratio is the ratio of a banking organization s Tier 1 capital to its total adjusted quarterly average assets (as defined for regulatory purposes). The requirements necessitate a minimum leverage ratio of 3.0% for financial holding companies and national banks that have the highest supervisory rating. All other financial holding companies and national banks are required to maintain a minimum leverage ratio of 4.0%, unless a different minimum is specified by an appropriate regulatory authority. For a depository institution to be considered well capitalized under the regulatory framework for prompt corrective action, its leverage ratio must be at least 5.0%. The bank regulatory agencies have encouraged banking organizations, including healthy, well-run banking organizations, to operate with capital ratios substantially in excess of the stated ratios required to maintain well capitalized status. This has resulted from, among other things, current economic conditions, the global financial crisis and the likelihood, as described below, of increased formal capital requirements for banking organizations. In light of the foregoing, the Company and the bank expect that they will maintain capital ratios substantially in excess of these ratios.

In 2004, the Basel Committee published a new capital accord (Basel II) to replace Basel I. Basel II provides two approaches for setting capital standards for credit risk an internal ratings-based approach tailored to individual institutions circumstances and a standardized approach that bases risk weightings on external credit assessments to a much greater

extent than permitted in existing risk-based capital guidelines. Basel II also sets capital requirements for operational risk and refines the existing capital requirements for market risk exposures.

In the United States, regulators have required the advanced approaches of Basel II to be implemented only by certain large or internationally active banking organizations, or core banks defined as those with consolidated total assets of \$250 billion or more or consolidated on-balance sheet foreign exposures of \$10 billion or more. Other U.S. banking organizations can elect to adopt the requirements of this rule (if they meet applicable qualification requirements), but they are not required to apply them. The rule also allows a banking organization s primary federal supervisor to determine that the application of the rule would not be appropriate in light of the bank s asset size, level of complexity, risk profile, or scope of operations. The Company is not required to comply with the advanced approaches of Basel II.

The Dodd-Frank Act requires the Federal Reserve Board, the OCC and the FDIC to adopt regulations imposing a continuing floor of the Basel I-based capital requirements in cases where the Basel II-based capital requirements and any changes in capital regulations resulting from Basel III (see below) otherwise would permit lower requirements. In December 2010, the Federal Reserve Board, the OCC and the FDIC issued a joint notice of proposed rulemaking that would implement this requirement.

In December 2010, the Basel Committee released its final framework for strengthening international capital and liquidity regulation, now officially identified by the Basel Committee as Basel III. Basel III, when implemented by the U.S. banking agencies and fully phased-in, will require bank holding companies and their bank subsidiaries to maintain substantially more capital, with a greater emphasis on common equity.

The Basel III final capital framework, among other things, (i) introduces as a new capital measure Common Equity Tier 1 (CET1), (ii) specifies that Tier 1 capital consists of CET1 and Additional Tier 1 capital instruments meeting specified requirements, (iii) defines CET1 narrowly by requiring that most adjustments to regulatory capital measures be made to CET1 and not to the other components of capital and (iv) expands the scope of the adjustments as compared to existing regulations.

When fully phased-in on January 1, 2019, Basel III requires banks to maintain (i) as a newly adopted international standard, a minimum ratio of CET1 to risk-weighted assets of at least 4.5%, plus a 2.5% capital conservation buffer (which is added to the 4.5% CET1 ratio as that buffer is phased-in, effectively resulting in a minimum ratio of CET1 to risk-weighted assets of at least 6.0%, plus the capital conservation buffer (which is added to the 6.0% Tier 1 capital ratio as that buffer is phased-in, effectively resulting in a minimum Tier 1 capital ratio of 8.5% upon full implementation), (iii) a minimum ratio of Total (that is, Tier 1 plus Tier 2) capital to risk-weighted assets of at least 8.0%, plus the capital conservation buffer (which is added to the 8.0% total capital ratio as that buffer is phased-in, effectively resulting in a minimum total capital ratio of 10.5% upon full implementation) and (iv) as a newly adopted international standard, a minimum leverage ratio of 3%, calculated as the ratio of Tier 1 capital to balance sheet exposures plus certain off-balance sheet exposures (as the average for each quarter of the month-end ratios for the quarter).

Basel III also provides for a countercyclical capital buffer, generally to be imposed when national regulators determine that excess aggregate credit growth becomes associated with a buildup of systemic risk, that would be a CET1 add-on to the capital conservation buffer in the range of 0% to 2.5% when fully implemented (potentially resulting in total buffers of between 2.5% and 5%).

The aforementioned capital conservation buffer is designed to absorb losses during periods of economic stress. Banking institutions with a ratio of CET1 to risk-weighted assets above the minimum but below the conservation buffer (or below the combined capital conservation buffer and counter-cyclical capital buffer, when the latter is applied) will face constraints on dividends, equity repurchases and compensation based on the amount of the short fall.

The implementation of the Basel III final framework will commence January 1, 2013. On that date, banking institutions will be required to meet the following minimum capital ratios:

## 3.5% CET1 to risk-weighted assets.

4.5% Tier 1 capital to risk-weighted assets.

#### 8.0% Total capital to risk-weighted assets.

The Basel III final framework provides for a number of new deductions from and adjustments to CET1. These include, for example, the requirement that mortgage servicing rights, deferred tax assets dependent upon future taxable income and significant investments in non-consolidated financial entities be deducted from CET1 to the extent that any one such category exceeds 10% of CET1 or all such categories in the aggregate exceed 15% of CET1.

Implementation of the deductions and other adjustments to CET1 will begin on January 1, 2014 and will be phased-in over a five-year period (20% per year). The implementation of the capital conservation buffer will begin on January 1, 2016 at 0.625% and be phased-in over a four-year period

(increasing by that amount on each subsequent January 1, until it reaches 2.5% on January 1, 2019).

The U.S. banking agencies have indicated informally that they expect to propose regulations implementing Basel III in mid-2011 with final adoption of implementing regulations in mid-2012. Notwithstanding its release of the Basel III framework as a final framework, the Basel Committee is considering further amendments to Basel III, including the imposition of additional capital surcharges on globally systemically important financial institutions. In addition to Basel III, Dodd-Frank requires or permits the Federal banking agencies to adopt regulations affecting banking institutions capital requirements in a number of respects, including potentially more stringent capital requirements for systemically important financial institutions. Accordingly, the regulations ultimately applicable to the Company may be substantially different from the Basel III final framework as published in December 2010.

## **Prompt Corrective Action**

The Federal Deposit Insurance Act, as amended (FDIA), requires, among other things, the federal banking agencies to take prompt corrective action in respect of depository institutions that do not meet minimum capital requirements. The FDIA sets forth the following five capital tiers: well capitalized, adequately capitalized, undercapitalized, significantly undercapitalized and critically undercapitalized. A depository institution the various relevant capital measures and certain other factors, as established by regulation. The relevant capital measures are the total capital ratio, the Tier 1 capital ratio and the leverage ratio.

A bank will be: (i) well capitalized if the institution has a total risk-based capital ratio of 10.0% or greater, a Tier 1 risk-based capital ratio of 6.0% or greater, and a leverage ratio of 5.0% or greater, and is not subject to any order or written directive by any such regulatory authority to meet and maintain a specific capital level for any capital measure; (ii) adequately capitalized if the institution has a total risk-based capital ratio of 8.0% or greater, a Tier 1 risk-based capital ratio of 4.0% or greater, and a leverage ratio of 4.0% or greater and is not well capitalized ; (iii) undercapitalized if the institution has a total risk-based ratio that is less than 8.0%, a Tier 1 risk-based capital ratio of less than 4.0%; (iv) significantly undercapitalized if the institution has a total risk-based ratio of less than 3.0% or a leverage ratio of less than 3.0% or a leverage ratio of less than 3.0% or a leverage ratio of less than 3.0%; and (v) critically under-capitalized if the institution s tangible equity is equal to or less than 2.0% of average quarterly tangible assets. An institution may be downgraded to, or deemed to be in, a capital category that is lower than that indicated by its capital ratios if it is determined to be in an unsafe or unsound condition or if it receives an unsatisfactory examination rating with respect to certain matters. As of December 31, 2010, the Company and the bank were well capitalized, based on the ratios and guidelines described above. A bank s capital category is determined solely for the purpose of applying prompt corrective action regulations, and the capital category may not constitute an accurate representation of the bank s overall financial condition or prospects for other purposes.

The FDIA generally prohibits a depository institution from making any capital distributions (including payment of a dividend) or paying any management fee to its parent holding company if the depository institution would thereafter be undercapitalized. Undercapitalized institutions are subject to growth limitations and are required to submit a capital restoration plan. The agencies may not accept such a plan without determining, among other things, that the plan is based on realistic assumptions and is likely to succeed in restoring the depository institution s capital. In addition, for a capital restoration plan to be acceptable, the depository institution s parent holding company must guarantee that the institution will comply with such a capital restoration plan. The aggregate liability of the parent holding company is limited to the lesser of (i) an amount equal to 5.0% of the depository institution into compliance with all capital standards applicable with respect to such institution as of the time it fails to comply with the plan. If a depository institution fails to submit an acceptable plan, it is treated as if it is significantly undercapitalized.

Significantly undercapitalized depository institutions may be subject to a number of requirements and restrictions, including orders to sell sufficient voting stock to become adequately capitalized, requirements to reduce total assets, and cessation of receipt of deposits from correspondent banks. Critically undercapitalized institutions are subject to the appointment of a receiver or conservator.

## Support of the Bank

Federal Reserve Board policy historically required a bank holding company to serve as a source of financial and managerial strength to its subsidiary banks. The Dodd-Frank Act codifies this policy as a statutory requirement. As a result, the Federal Reserve Board may require the parent company to stand ready to use its resources to provide adequate capital funds to its banking subsidiaries during periods of financial stress or adversity. This support may be required at times by the Federal Reserve Board even though not expressly required

by regulation and even though the parent company may not be in a financial position to provide such support. In addition, any capital loans by a bank holding company to any of its subsidiary banks are subordinate in right of payment to deposits and to certain other indebtedness of such subsidiary banks. The BHCA provides that, in the event of a bank holding company s bankruptcy, any commitment by the bank holding company to a federal bank regulatory agency to maintain the capital of a subsidiary bank will be assumed by the bankruptcy trustee and entitled to priority of payment. Furthermore, under the National Bank Act, if the capital stock of the bank is impaired by losses or otherwise, the OCC is authorized to require payment of the deficiency by assessment upon the parent company. If the assessment is not paid within three months, the OCC could order a sale of the capital stock of the bank held by the parent company to make good the deficiency.

## FDIC Insurance

The FDIC utilizes a risk-based assessment system that imposes insurance premiums based upon a risk matrix that, as described below, takes into account, among other things, a bank s capital level and supervisory rating (its CAMELS rating ).

Under the Federal Deposit Insurance Reform Act of 2005, which became law in 2006, the bank received a one-time assessment credit that can be applied against future premiums through 2010, subject to certain limitations. Any increase in insurance assessments could have an adverse impact on the earnings of insured institutions, including the bank. The bank paid a deposit insurance premium in 2010 amounting to \$2.9 million.

In addition, the bank is required to make payments for the servicing of obligations of the Financing Corporation (FICO) issued in connection with the resolution of savings and loan associations, so long as such obligations remain outstanding. The bank paid a FICO assessment in 2010 amounting to \$200 thousand. The FICO annualized assessment rate for the first quarter of 2011 is 1.02 cents per \$100 of deposits.

The enactment of Emergency Economic Stabilization Act of 2008 (EESA) temporarily raised the basic limit on federal deposit insurance coverage from \$100,000 to \$250,000 per depositor through December 31, 2009. The temporary increase in deposit insurance coverage became effective on October 3, 2008. On May 20, 2009, the FDIC announced that the temporary increase in the basic deposit insurance limit has been extended through December 31, 2013.

On November 21, 2008, the Board of Directors of the FDIC adopted a final rule relating to the Temporary Liquidity Guarantee Program (TLG Program). The TLG Program was announced by the FDIC on October 14, 2008, preceded by the determination of systemic risk by the Secretary of the Department of Treasury (after consultation with the President), as an initiative to counter the system-wide crisis in the nations financial sector. Under the TLG Program the FDIC would (i) guarantee, through the earlier of maturity or June 30, 2012, certain newly issued senior unsecured debt issued by participating institutions on or after October 14, 2008, and before June 30, 2009 and (ii) provide full FDIC deposit insurance coverage for non-interest bearing transaction deposit accounts, NOW accounts paying less than 0.5% interest per annum and Interest on Lawyers Trust Accounts held at participating FDIC-insured institutions through June 30, 2010. Although the deposit insurance program was originally scheduled to expire on December 31, 2009, the FDIC implemented a final rule, effective as of October 1, 2009, extending the transaction account guarantee program by six months until June 30, 2010 (subject to the option of participating institutions to opt out of such six-month extension). The bank did not choose to opt out of the six-month extension. Coverage under the TLG Program was available for the first 30 days without charge. The fee assessment for coverage of senior unsecured debt ranges from 50 basis points to 100 basis points per annum, depending on the initial maturity of the debt. The fee assessment for deposit insurance coverage is 10 basis points per annum on amounts in covered accounts exceeding \$250,000, payable quarterly. On December 5, 2008, the bank elected to participate in the deposit insurance program and declined, along with the parent company, to participate in the debt guarantee program.

On November 17, 2009, the FDIC implemented a final rule requiring insured institutions to prepay their estimated quarterly risk-based assessments for the fourth quarter of 2009, and for all of 2010, 2011 and 2012. Such prepaid assessments were collected by the FDIC on December 30, 2009, along with each institution s quarterly risk-based deposit insurance assessment for the third quarter of 2009.

In November 2010, the FDIC issued a final rule to implement provisions of the Dodd-Frank Act that provide for temporary unlimited coverage for non-interest-bearing transaction accounts. The separate coverage for non-interest-bearing transaction accounts became effective on December 31, 2010 and terminates on December 31, 2012.

In February 2011, the FDIC also issued a final rule to change the deposit insurance assessment base from total domestic deposits to average total assets minus average tangible equity, as required by the Dodd-Frank Act, effective April 1, 2011. The FDIC also issued a final rule that revises the initial and base assessment rate schedule, effective April 1, 2011. The initial base assessment rate will range from 5 to 35 basis points on an annualized basis (basis points representing cents

per \$100 of assessable assets). After the effect of potential base-rate adjustments, the total base assessment rate could range from 2.5 to 45 basis points on an annualized basis. The potential adjustments to an institution s initial base assessment rate include (i) a potential decrease of up to 5 basis points for certain long-term unsecured debt ( unsecured debt adjustment ) and, except for well-capitalized institutions with a CAMELS rating of 1 or 2, (ii) a potential increase of up to 10 basis points for brokered deposits in excess of 10% of domestic deposits ( brokered deposit adjustment ). As the DIF reserve ratio grows, the rate schedule will be adjusted downward. Additionally, the rule includes a new adjustment for depository institution debt whereby an institution will pay an additional premium equal to 50 basis points on every dollar (above 3% of an institution s Tier 1 capital) of long-term, unsecured debt held that was issued by another insured depository institution (excluding debt guaranteed under the Temporary Liquidity Guarantee Program). Either an increase in the Risk Category of the bank or adjustments to the base assessment rates could have a material adverse effect on our earnings.

Under the FDIA, insurance of deposits may be terminated by the FDIC upon a finding that the institution has engaged in unsafe and unsound practices, is in an unsafe or unsound condition to continue operations, or has violated any applicable law, regulation, rule, order, or condition imposed by the FDIC.

In its resolution of the problems of an insured depository institution in default or in danger of default, the FDIC is generally required to satisfy its obligations to insured depositors at the least possible cost to the DIF. In addition, the FDIC may not take any action that would have the effect of increasing the losses to the deposit insurance fund by protecting depositors for more than the insured portion of deposits or creditors other than depositors.

## **Emergency Economic Stabilization Act of 2008**

In response to unprecedented market turmoil during the third quarter of 2008, the Emergency Economic Stabilization Act of 2008 was enacted on October 3, 2008. EESA authorized the U.S. Treasury to provide up to \$700 billion to support the financial services industry.

Pursuant to authority under EESA, the U.S. Treasury created the TARP Capital Purchase Program under which the U.S. Treasury was authorized to invest up to \$250 billion in senior preferred stock of U.S. banks and savings associations or their holding companies. Qualifying financial institutions were permitted to issue senior preferred stock with a value equal to not less than 1% of risk-weighted assets and not more than the lesser of \$25 billion or 3% of risk-weighted assets. The preferred stock will pay dividends at the rate of 5% per annum until the fifth anniversary of the investment and thereafter at the rate of 9% per annum. No dividends may be paid on common stock unless dividends have been paid on the senior preferred stock. Until the third anniversary of the issuance of the senior preferred, the consent of the U.S. Treasury will be required for any increase in the dividends on common stock or for any stock repurchases unless the senior preferred has been redeemed in its entirety or the U.S. Treasury has transferred the senior preferred to third parties. The senior preferred will not have voting rights other than the right to vote as a class on the issuance of any preferred stock ranking senior, any change in its terms or any merger, exchange or similar transaction that would adversely affect its rights. The senior preferred will also have the right to elect two directors if dividends have not been paid for six periods. The senior preferred will be freely transferable and participating institutions will be required to file a shelf registration statement covering the senior preferred. The issuing institution must grant the U.S. Treasury piggyback registration rights. Prior to issuance, the financial institution and its senior executive officers must modify or terminate all benefit plans and arrangements to comply with EESA. Senior executives must also waive any claims against the U.S. Treasury.

In connection with the issuance of the senior preferred, participating institutions must issue to the U.S. Treasury immediately exercisable 10-year warrants to purchase common stock with an aggregate market price equal to 15% of the amount of senior preferred. The exercise price of the warrants will equal the market price of the common stock on the date of the investment. The U.S. Treasury will not exercise voting rights with respect to any shares of common stock acquired through exercise of the warrants. The financial institution must file a shelf registration statement covering the warrants and underlying common stock as soon as practicable after issuance and grant piggyback registration rights.

On December 23, 2008, the parent company issued preferred shares and a warrant to purchase its common shares to the U.S. Treasury as a participant in the TARP Capital Purchase Program. The amount of capital raised in that transaction was \$42 million, approximately three percent of the Company s risk-weighted assets. Prior to December 23, 2011, unless the parent company has redeemed all such preferred shares or the U.S. Treasury has transferred all such preferred shares to a third party, the consent of the U.S. Treasury will be required for us to, among other things, increase the dividend on the parent company s common shares above a quarterly cash dividend of \$0.19 per share or repurchase our common shares or outstanding preferred shares except in limited circumstances. Sterling filed a registration statement on Form S-3 covering

the preferred stock, the warrant and underlying common stock, as required under the terms of the TARP investment, on January 22, 2009. The registration statement was declared effective by the SEC on April 13, 2009.

In addition, until the U.S. Treasury ceases to own any of the Company s securities sold under the TARP Capital Purchase Program, the compensation arrangements for our senior executive officers must comply in all respects with EESA and the rules and regulations there under. In compliance with such requirements, each of our senior executive officers in December 2008 agreed in writing to accept the compensation standards in existence at that time under the TARP Capital Purchase Program and thereby cap or eliminate some of their contractual or legal rights. The provisions agreed to were as follows:

*No Golden Parachute Payments*. Golden parachute payment under the TARP Capital Purchase Program means a severance payment resulting from involuntary termination of employment, or from bankruptcy of the employer, that exceeds three times the terminated employee s average base salary over the five years prior to termination. Our senior executive officers have agreed to forgo all golden parachute payments for as long as two conditions remain true: they remain senior executive officers (CEO, CFO and the next three highest-paid executive officers), and the U.S. Treasury continues to hold our equity securities the parent company issued to it under the TARP Capital Purchase Program (the period during which the U.S. Treasury holds those securities is the CPP Covered Period ).

*Recovery of Bonus and Incentive Compensation if Based on Certain Material Inaccuracies.* Our senior executive officers have also agreed to a clawback provision, which means that the parent company can recover incentive compensation paid during the CPP Covered Period that is later found to have been based on materially inaccurate financial statements or other materially inaccurate measurements of performance.

*No Compensation Arrangements That Encourage Excessive Risks.* During the CPP Covered Period, the parent company is not allowed to enter into or maintain compensation arrangements that encourage senior executive officers to take unnecessary and excessive risks that threaten the value of the Company. To make sure this does not happen, our Compensation Committee is required to meet at least once a year with our senior risk officer to review our executive compensation arrangements in the light of our risk management policies and practices. Our senior risk officer will, if required to, review our executive compensation arrangements in light of our risk management policies and practices. Our senior executive officers written agreements include their obligation to execute whatever documents the parent company may require in order to make any changes in compensation arrangements resulting from the Compensation Committee s review.

*Limit on Federal Income Tax Deductions.* During the CPP Covered Period, the parent company is not allowed to take federal income tax deductions for compensation paid to senior executive officers in excess of \$500 thousand per year, with certain exceptions that do not apply to our senior executive officers.

See Liquidity Risk beginning on page 53 in MANAGEMENT S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS ASSET/ LIABILITY MANAGEMENT for a further discussion of our participation in the U.S. Treasury TARP Capital Purchase Program.

## American Recovery and Reinvestment Act of 2009

On February 17, 2009, President Obama signed the American Recovery and Reinvestment Act of 2009 (ARRA) into law. ARRA modified the compensation-related limitations contained in the TARP Capital Purchase Program, created additional compensation-related limitations and directed the Secretary of the Treasury to establish standards for executive compensation applicable to participants in TARP, regardless of when participation commenced. Thus, the newly enacted compensation-related limitations are applicable to the Company and to the extent the U.S. Treasury may implement these restrictions unilaterally the Company will apply these provisions. The provisions may be retroactive. The compensation-related limitations applicable to the Company which have been added or modified by ARRA are as follows, which provisions must be included in standards established by the U.S. Treasury:

*No Severance Payments.* Under ARRA, golden parachutes were redefined as any severance payment resulting from involuntary termination of employment, or from bankruptcy of the employer, except for payments for services performed or benefits accrued. Consequently, under ARRA the Company is prohibited from making any severance payment to our senior executive officers (defined in ARRA as the five highest paid executive officers) and our next five most highly compensated employees during the CPP Covered Period.

*Recovery of Incentive Compensation if Based on Certain Material Inaccuracies.* ARRA also contains the clawback provision discussed above but extends its application to any bonus or retention awards and other incentive compensation paid to any of our senior executive officers or next 20 most highly compensated employees during the CPP Covered Period that is later found to have been based on materially inaccurate financial statements or other materially inaccurate measurements of performance.

No Compensation Arrangements That Encourage Earnings Manipulation. Under ARRA, during the CPP Covered Period,

the parent company is not allowed to enter into compensation arrangements that encourage manipulation of the reported earnings of the Company to enhance the compensation of any of our employees.

*Limits on Incentive Compensation.* ARRA contains a provision that prohibits the payment or accrual of any bonus, retention award or incentive compensation to any of our 5 most highly compensated employees during the CPP Covered Period other than awards of long-term restricted stock that (i) do not fully vest during the CPP Coverage Period, (ii) have a value not greater than one-third of the total annual compensation of the awardee and (iii) are subject to such other restrictions as determined by the Secretary of the Treasury. The prohibition on bonus, incentive compensation and retention awards does not preclude payments required under written employment contracts entered into on or prior to February 11, 2009.

*Compensation Committee Functions.* ARRA requires that our Compensation Committee be comprised solely of independent directors and that it meet at least semiannually to discuss and evaluate our employee compensation plans in light of an assessment of any risk posed to us from such compensation plans.

*Compliance Certifications.* ARRA also requires a written certification by our Chief Executive Officer and Chief Financial Officer of our compliance with the provisions of ARRA. These certifications must be contained in the Company s Annual Report on Form 10-K for the year ended December 31, 2009 and any subsequent year during the Capital Purchase Plan Covered Period the relevant U.S. Treasury regulations are issued.

*Treasury Review of Excessive Bonuses Previously Paid.* ARRA directs the Secretary of the Treasury to review all compensation paid to our senior executive officers and our next 20 most highly compensated employees to determine whether any such payments were inconsistent with the purposes of ARRA or were otherwise contrary to the public interest. If the Secretary of the Treasury makes such a finding, the Secretary of the Treasury is directed to negotiate with the TARP Capital Purchase Program recipient and the subject employee for appropriate reimbursements to the federal government with respect to the compensation and bonuses.

Say on Pay. Under ARRA the SEC promulgated rules requiring a non-binding say on pay vote by the shareholders on executive compensation at the annual meeting during the CPP Covered Period.

ARRA also provides that the U.S. Treasury, after consultation with the Company s federal regulator, permit the Company at any time to redeem our Series A Preferred Shares at liquidation value. Upon such redemption, the warrant to purchase the parent company s common shares that was issued to the U.S. Treasury may also be repurchased at its then current fair value or if the parent company does not elect to repurchase the warrant or the parent company and the U.S. Treasury cannot agree on the fair value of the warrant, the warrant would be sold publicly by the U.S. Treasury.

On June 10, 2009, the U.S. Treasury issued guidance on the compensation and corporate governance standards that apply to TARP recipients, as summarized below:

Bonuses accrued or paid before the effective date of the rule adopted by the U.S. Treasury are not subject to the rule s bonus payment limitation. In addition, separation pay for departures that occurred before receipt of TARP assistance also is not subject to the limits of the rule (even if payments continue to be made after effectiveness).

The term most highly compensated employees covers all employees, not only executive officers or other policy makers. The determination of the most highly compensated employees is based on annual compensation for the prior year calculated in accordance with SEC disclosure rules.

The rule permits salary paid in property, including stock, so long as it is based on a dollar amount (not a number of shares), is fully vested and accrues as cash salary would. The rule also permits salary paid in stock units in respect of shares of the TARP recipient, or subsidiaries or divisions of the TARP recipient (though not below the subsidiary or division for which the employee directly provides services). Holding periods also are permitted.

Commission payments for sales, brokerage and asset management services for unrelated customers will not be subject to the bonus restrictions, but only if they are consistent with an existing plan of the TARP recipient in effect before February 17, 2009.

The rule imposes a restrictive set of best practices on TARP recipients: (i) the five senior executive officers and the next 20 most highly compensated employees may not receive any tax gross-up payment of any kind, including payments to cover taxes due on company-provided benefits or separation payments; (ii) the prohibition on separation payments to the five senior executive officers and the next five most highly compensated employees is extended to payments in connection with a change in control; (iii) the compensation committee must review all employee compensation plans every six months for unnecessary risk and provide an expanded certification including narrative disclosure of its analysis and conclusions; (iv) TARP recipients must exercise their clawback rights unless doing so

would be unreasonable; and (v) TARP recipients must adopt a policy reasonably designed to eliminate excessive or luxury expenditures.

An institution will not become subject to the compensation standards merely as a result of acquiring a TARP recipient. In addition, if an acquiror is not subject to the standards

immediately after the transaction, any employees of the acquiror (including former employees of the TARP recipient who become acquiror employees as a result of the transaction) will not be subject to the standards.

The TARP period during which the compensation standards apply ceases when the obligations arising from financial assistance cease and specifically excludes any period when the only outstanding obligation of a TARP recipient consists of U.S. Treasury warrants to purchase common stock.

#### **Incentive Compensation**

In June 2010, the Federal Reserve, OCC and FDIC issued comprehensive final guidance on incentive compensation policies intended to ensure that the incentive compensation policies of banking organizations do not undermine the safety and soundness of such organizations by encouraging excessive risk-taking. The incentive compensation guidelines, which cover all employees that have the ability to materially affect the risk profile of an organization, either individually or as part of a group, are based upon the key principles that a banking organization s incentive compensation arrangements should (i) provide incentives that do not encourage risk-taking beyond the organization s ability to effectively identify and manage risks, (ii) be compatible with effective internal controls and risk management, and (iii) be supported by strong corporate governance, including active and effective oversight by the organization s board of directors.

The Federal Reserve will review, as part of the regular, risk-focused examination process, the incentive compensation arrangements of banking organizations, such as the Company, that are not large, complex banking organizations. These reviews will be tailored to each organization based on the scope and complexity of the organization s activities and the prevalence of incentive compensation arrangements. The findings of the supervisory initiatives will be included in reports of examination. Deficiencies will be incorporated into the organization s supervisory ratings, which can affect the organization s ability to make acquisitions and take other actions. Enforcement actions may be taken against a banking organization if its incentive compensation arrangements, or related risk-management control or governance processes, pose a risk to the organization s safety and soundness and the organization is not taking prompt and effective measures to correct the deficiencies.

The scope and content of the U.S. banking regulators policies on executive compensation are continuing to develop and are likely to continue evolving in the near future. It cannot be determined at this time whether compliance with such policies will adversely affect the ability of Sterling and its subsidiaries to hire, retain and motivate its and their key employees.

## **Depositor Preference**

The FDIA provides that, in the event of the liquidation or other resolution of an insured depository institution, the claims of depositors of the institution, including the claims of the FDIC as subrogee of insured depositors, and certain claims for administrative expenses of the FDIC as a receiver, will have priority over other general unsecured claims against the institution. If an insured depository institution fails, insured and uninsured depositors, along with the FDIC, will have priority in payment ahead of unsecured, non-deposit creditors, including the parent bank holding company, with respect to any extensions of credit they have made to such insured depository institution.

#### Liability of Commonly Controlled Institutions

The FDIA provides that a depository institution insured by the FDIC can be held liable by the FDIC for any loss incurred, or reasonably expected to be incurred, in connection with the default of a commonly controlled FDIC-insured depository institution or in connection with any assistance provided by the FDIC to a commonly controlled institution in danger of default (as defined in the FDIA).

#### **Community Reinvestment Act**

The CRA requires depository institutions to assist in meeting the credit needs of their market areas consistent with safe and sound banking practice. Under the CRA, each depository institution is required to help meet the credit needs of its market areas by, among other things, providing credit to low- and moderate-income individuals and communities. Depository institutions are periodically examined for compliance with the CRA and are assigned ratings. In order for a financial holding company to commence any new activity permitted by the BHCA, or to acquire any company engaged in any new activity permitted by the BHCA, each insured depository institution subsidiary of the financial holding company must have received a rating of at least satisfactory in its most recent examination under the CRA. Furthermore, banking regulators take into account CRA ratings when considering approval of a proposed transaction.

## **Financial Privacy**

In accordance with the Gramm-Leach-Bliley Act, federal banking regulators adopted rules that limit the ability of banks and other financial institutions to disclose non-public information about consumers to nonaffiliated third parties. These limitations require disclosure of privacy policies to consumers and, in some circumstances, allow consumers to prevent disclosure of certain personal information to a nonaffiliated third party. The privacy provisions of the Gramm-Leach-Bliley Act affect how consumer information is transmitted through diversified financial

companies and conveyed to outside vendors.

#### Anti-Money Laundering Initiatives and the USA Patriot Act

A major focus of governmental policy on financial institutions in recent years has been aimed at combating money laundering and terrorist financing. The USA Patriot Act of 2001 (the USA Patriot Act ) substantially broadened the scope of United States anti-money laundering laws and regulations by imposing significant new compliance and due diligence obligations, creating new crimes and penalties and expanding the extra-territorial jurisdiction of the United States. The U.S. Treasury has issued a number of implementing regulations which apply to various requirements of the USA Patriot Act to financial institutions such as the Company. These regulations impose obligations on financial institutions to maintain appropriate policies, procedures and controls to detect, prevent and report money laundering and terrorist financing and to verify the identity of their customers. Failure of a financial institution to maintain and implement adequate programs to combat money laundering and terrorist financing, or to comply with all of the relevant laws or regulations, could have serious legal and reputational consequences for the institution, including the imposition of enforcement actions and civil monetary penalties.

#### Office of Foreign Assets Control Regulation

The United States has imposed economic sanctions that affect transactions with designated foreign countries, nationals and others. These sanctions, which are administered by the U.S. Treasury Department Office of Foreign Assets Control (OFAC), take many different forms. Generally, however, they contain one or more of the following elements: (i) restrictions on trade with or investment in a sanctioned country, including prohibitions against direct or indirect imports from and exports to a sanctioned country and prohibitions on U.S. persons engaging in financial transactions relating to making investments in, or providing investment-related advice or assistance to, a sanctioned country; and (ii) a blocking of assets in which the government or specially designated nationals of the sanctioned country have an interest, by prohibiting transfers of property subject to U.S. jurisdiction (including property in the possession or control of U.S. persons). Blocked assets (for example, property and bank deposits) cannot be paid out, withdrawn, set off or transferred in any manner without a license from OFAC. Failure to comply with these sanctions could have serious legal, financial and reputational consequences.

#### Legislative Initiatives and Regulatory Reform

From time to time, various legislative and regulatory initiatives are introduced in Congress and state legislatures, as well as by regulatory agencies. Such initiatives may include proposals to expand or contract the powers of bank holding companies and depository institutions or proposals to substantially change the financial institution regulatory system. Such legislation could change banking statutes and the operating environment of the Company in substantial and unpredictable ways. If enacted, such legislation could increase or decrease the cost of doing business, limit or expand permissible activities or affect the competitive balance among banks, savings associations, credit unions and other financial institutions. The Company cannot predict whether any such legislation will be enacted, and, if enacted, the effect that it, or any implementing regulations, would have on the financial condition or results of operations of the Company. A change in statutes, regulations or regulatory policies applicable to the Company could have a material effect on the business of the Company.

As a result of the continued volatility and instability in the financial system, the Congress, the bank regulatory authorities and other government agencies have called for or proposed additional regulation and restrictions on the activities, practices and operations of banks and their holding companies. The Congress and the federal banking agencies have broad authority to require all banks and holding companies to adhere to more rigorous or costly operating procedures, corporate governance procedures, or to engage in activities or practices which they would not otherwise elect.

We cannot predict whether or in what form further legislation and/or regulations may be adopted or the extent to which Sterling s business may be affected thereby.

#### Safety and Soundness Standards

Federal banking agencies promulgate safety and soundness standards relating to, among other things, internal controls, information systems and internal audit systems, loan documentation, credit underwriting, interest rate exposure, asset growth, compensation, fees, and benefits. With respect to internal controls, information systems and internal audit systems, the standards describe the functions that adequate internal controls and information systems must be able to perform, including: (i) monitoring adherence to prescribed policies; (ii) effective risk management; (iii) timely and accurate financial, operations, and regulatory reporting; (iv) safeguarding and managing assets; and (v) compliance with applicable laws and regulations. The standards also include requirements that: (i) those performing internal audits be qualified and independent; (ii) internal controls and information systems be tested and reviewed; (iii) corrective actions be adequately documented; and (iv) results of an audit be made available for review of management actions. In addition, federal banking agencies adopted regulations that authorize, but do not require, an agency to order an institution that has been given notice by an agency that it is not satisfying any of such safety and soundness standards to submit a compliance plan. If, after being so notified, an institution fails to submit an acceptable compliance plan or fails in any material

respect to implement an acceptable compliance plan, the agency must issue an order directing action to correct the deficiency and may issue an order directing other actions of the types to which an undercapitalized institution is subject under the prompt corrective action provisions of the FDIA. See Prompt Corrective Action above. If an institution fails to comply with such an order, the agency may seek to enforce such order in judicial proceedings and to impose civil money penalties.

#### Consequences of Non-compliance with Supervision or Regulation

Federal banking law grants substantial enforcement powers to federal banking regulators. This enforcement authority includes, among other things, the ability to assess civil money penalties, to issue cease-and-desist or removal orders and to initiate injunctive actions against banking organizations and institution-affiliated parties. In general, these enforcement actions may be initiated for violations of laws and regulations and unsafe or unsound practices. Other actions or inactions may provide the basis for enforcement action, including misleading or untimely reports filed with regulatory authorities.

The bank and its institution-affiliated parties, including its management, employees, agents, independent contractors, consultants such as attorneys and accountants and others who participate in the conduct of the financial institution s affairs, are subject to potential civil and criminal penalties for violations of law, regulations or written orders of a government agency. In addition, regulators are provided with greater flexibility to commence enforcement actions against institutions and institution-affiliated parties. Possible enforcement actions include the termination of deposit insurance and cease-and-desist orders. Such orders may, among other things, require affirmative action to correct any harm resulting from a violation or practice, including restitution, reimbursement, indemnifications or guarantees against loss. A financial institution may also be ordered to restrict its growth, dispose of certain assets, rescind agreements or contracts, or take other actions as determined by the ordering agency to be appropriate.

Under provisions of the federal securities laws, a determination by a court or regulatory agency that certain violations have occurred at a company or its affiliates can result in fines, restitution, a limitation of permitted activities, disqualification to continue to conduct certain activities and an inability to rely on certain favorable exemptions. Certain types of infractions and violations can also affect a public company in its timing and ability to expeditiously issue new securities into the capital markets. **SELECTED CONSOLIDATED STATISTICAL INFORMATION** 

## SELECTED CONSOLIDATED STATISTICAL INFORMATION

I. Distribution of Assets, Liabilities and Shareholders Equity; Interest Rates and Interest Differential The information appears on pages 50 and 51 in MANAGEMENT S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS.

## II. Investment Portfolio

A summary of the Company s investment securities by type with related carrying values at the end of each of the three most recent fiscal years appears beginning on page 41 in MANAGEMENT S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS. Information regarding book values and range of maturities by type of security and weighted average yields for totals of each category appears on pages 42 and 43 in MANAGEMENT S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS.

## III. Loan Portfolio

A table setting forth the composition of the Company s loan portfolio, net of unearned discounts, at the end of each of the five most recent fiscal years appears beginning on page 43 in MANAGEMENT S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS.

A table setting forth the maturities and sensitivity to changes in interest rates of the Company s commercial and industrial loans at December 31, 2010 appears on page 44 in MANAGEMENT S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS.

It is the policy of the Company to consider all customer requests for extensions of original maturity dates (rollovers), whether in whole or in part, as though each was an application for a new loan subject to standard approval criteria, including credit evaluation. Additional information appears under Loan Portfolio beginning on page 43 in MANAGEMENT S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS and under Loans in Note 1 and in Note 6 of the Company s consolidated financial statements.

A table setting forth the aggregate amount of domestic nonaccrual, past due and restructured loans of the Company at the end of each of the five most recent fiscal years appears on page 45 in MANAGEMENT S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS ; there were no foreign loans accounted

for on a nonaccrual basis. Information regarding loans that have undergone a troubled debt restructuring and impaired loans is presented under Loans and Allowance for Loan Losses in Note 6 of the Company s consolidated financial statements. Loan concentration information is presented in Note 6 of the Company s consolidated financial statements. Information regarding Federal Reserve and Federal Home Loan Bank stock is presented in Note 7 of the Company s consolidated financial statements.

### IV. Summary of Loan Loss Experience

A summary of loan loss experience appears in Note 6 of the Company s consolidated financial statements and beginning on page 44 under Asset Quality in MANAGEMENT S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS. A table setting forth certain information with respect to the Company s loan loss experience for each of the five most recent fiscal years appears on page 47 in MANAGEMENT S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS.

The Company considers its allowance for loan losses to be adequate based upon the size and risk characteristics of the outstanding loan portfolio at December 31, 2010. Net losses within the loan portfolio are not, however, statistically predictable and are subject to various external factors that are beyond the control of the Company. Consequently, changes in conditions in the next twelve months could result in future provisions for loan losses varying from the provision recorded in 2010.

A table presenting the Company s allocation of the allowance at the end of each of the five most recent fiscal years appears on page 48 in MANAGEMENT S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS. This allocation is based on estimates by management that may vary based on management s evaluation of the risk characteristics of the loan portfolio. The amount allocated to a particular loan category may not necessarily be indicative of actual future charge-offs in that loan category.

#### V. Deposits

Average deposits and average rates paid for each of the three most recent years are presented on page 50 in MANAGEMENT S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS.

Outstanding time certificates of deposit issued from domestic and foreign offices and interest expense on domestic and foreign deposits are presented in Note 9 of the Company s consolidated financial statements.

The table providing selected information with respect to the Company s deposits for each of the three most recent fiscal years appears on page 49 in MANAGEMENT S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS.

Interest expense for the three most recent fiscal years is presented in Note 9 of the Company s consolidated financial statements.

#### VI. Return on Assets and Equity

The Company s returns on average total assets and average shareholders equity, dividend payout ratio and average shareholders equity to average total assets for each of the five most recent years is presented in SELECTED F INANCIAL DATA on page 31.

#### VII. Short-Term Borrowings

Balance and rate data for significant categories of the Company s short-term borrowings for each of the three most recent years is presented in Note 10 and in Note 11 of the Company s consolidated financial statements.

## INFORMATION AVAILABLE ON OUR WEB SITE

The Company s Internet address is www.sterlingbancorp.com and the investor relations section of our web site is located at www.sterlingbancorp.com/ir/investor.cfm. The Company makes available free of charge, on or through the investor relations section of the Company s web site, annual reports on Form 10-K, quarterly reports on Form 10-Q and current reports on Form 8-K and amendments to those reports filed or furnished pursuant to Section 13(a) or 15(d) of the Securities Exchange Act of 1934 as soon as reasonably practicable after the Company electronically files such material with, or furnishes it to, the SEC.

Also posted on the Company s web site, and available in print upon request of any shareholder to our Investor Relations Department, are the Charters for our Board of Directors Audit Committee, Compensation Committee and Corporate Governance and Nominating Committee, our Corporate Governance Guidelines, our Method for Interested Persons to Communicate with Non-Management Directors, our policy on excessive or luxury expenditures and a Code of Business Conduct and Ethics governing our directors, officers and employees. Within the time period required by the SEC and the NYSE, the Company will post on our web site any amendment to the Code of Business Conduct and Ethics and any waiver applicable to our senior financial officers, as defined in the Code, or our executive officers or directors. In addition, information concerning purchases and sales of our equity securities by our executive officers and directors is posted on our web site. The contents of the Company s web site are not incorporated by reference into this annual report on Form 10-K.

## ITEM 1A. RISK FACTORS

An investment in the parent company s common shares is subject to risks inherent to the Company s business. The material risks and uncertainties that management believes affect the Company are described below. Before making an investment decision, you should carefully consider the risks and uncertainties described below together with all of the other information included or incorporated by reference in this report. The risks and uncertainties described below are not the only ones facing the Company. Additional risks and uncertainties that management is not aware of or focused on, or that management currently deems immaterial, may also impair the Company s business operations. This report is qualified in its entirety by these risk factors.

If any of the following risks adversely affect the Company s business, financial condition or results of operations, the value of the parent company s common shares could decline significantly and you could lose all or part of your investment.

## RISKS RELATED TO THE COMPANY S BUSINESS

#### The Company s Business May Be Adversely Affected by Conditions in the Financial Markets and Economic Conditions Generally

From December 2007 through June 2009, the United States experienced a recession and a slowing of economic activity. Business activity across a wide range of industries and regions was greatly reduced. The real estate sector, and the related segments of the construction business sector, were particularly severely affected. Local governments and many businesses are in serious difficulty, due to the lack of consumer spending and the lack of liquidity in the credit markets. Unemployment has increased significantly.

Since mid-2007, and particularly during the second half of 2008 and the first half of 2009, the financial services industry and the securities markets generally were materially and adversely affected by significant declines in the values of nearly all asset classes and by a serious lack of liquidity. This was initially triggered by declines in home prices and the values of subprime mortgages, but spread to all mortgage and real estate asset classes, to leveraged bank loans and to nearly all asset classes, including equities.

The U.S. financial system has stabilized, but internationally, the weakness of certain foreign banks and the increasing danger of sovereign defaults has led to continuing high levels of uncertainty and volatility in the international financial markets.

Although economic conditions have begun to improve, certain sectors, such as real estate, remain weak and unemployment remains high. Despite the actions of the US Government and the Federal Reserve Board, both with respect to monetary policy, fiscal policy, and increased regulations meant to restore investor confidence, the overall business environment in 2010 was adverse for many households and businesses in the United States and worldwide.

The Company s financial performance generally, and in particular the ability of borrowers to pay interest on and repay the principal of outstanding loans and the value of collateral securing those loans, is highly dependent upon the business environment in the markets where the Company operates, in the New York metropolitan area and in the United States as a whole. A favorable business environment is generally characterized by, among other factors, economic growth, efficient capital markets, low inflation, high business and investor confidence, and strong business earnings. Unfavorable or uncertain economic and market conditions can be caused by: declines in

economic growth, business activity, or investor or business confidence; limitations on the availability or increases in the cost of credit and capital; increases in inflation or interest rates; natural disasters; or a combination of these or other factors. The business environment in the New York metropolitan area, the United States and worldwide has been improving throughout 2010, but there can be no assurance that these conditions will continue to improve in the near term. A slowing of improvement or a return to deteriorating economic conditions could adversely affect the credit quality of the Company s loans, results of operations and financial condition.

# Improvements in Economic Indicators Disproportionately Affecting the Financial Services Industry May Lag Improvements in the General Economy

The improvement of certain economic indicators, such as unemployment and real estate asset values and rents, may nevertheless continue to lag behind the overall economy. These economic indicators typically affect certain industries, such as real estate and financial services, more significantly. For example, improvements in commercial real estate fundamentals typically lag broad economic recovery by 12 to 18 months. The Company s clients include entities active in these industries. Furthermore, financial services companies with a substantial lending business are dependent upon the ability of their borrowers to make debt service payments on loans. Should unemployment or real estate asset values fail to recover for an extended period of time, the Company could be adversely affected.

## The Company Is Subject to Interest Rate Risk

The Company s earnings and cash flows are largely dependent upon its net interest income. Net interest income is the difference between interest income earned on interest-earning assets such as loans and securities and interest expense paid on interest-bearing liabilities such as deposits and borrowed funds. Interest rates are highly sensitive to many factors that are beyond the Company s control, including general economic conditions and policies of various governmental and regulatory agencies and, in particular, the Federal Open Market Committee. Changes in monetary policy, including changes in interest rates, could influence not only the interest the Company receives on loans and securities and the amount of interest it pays on deposits and borrowings, but such changes could also affect (i) the Company s ability to originate loans and obtain deposits, (ii) the fair value of the Company s financial assets and liabilities, and (iii) the average duration of the Company s mortgage-backed securities portfolio. If the interest rates paid on deposits and other borrowings increase at a faster rate than the interest rates received on loans and other investments, the Company s net interest income, and therefore earnings, could be adversely affected. Earnings could also be adversely affected if the interest rates received on loans and other investments fall more quickly than the interest rates paid on deposits and other borrowings.

Although management believes it has implemented effective asset and liability management strategies to reduce the potential effects of changes in interest rates on the Company s results of operations, any substantial, unexpected, prolonged change in market interest rates could have a material adverse effect on the Company s financial condition and results of operations. For further discussion related to the Company s management of interest rate risk, see ASSET/LIABILITY MANAGEMENT beginning on page 52 in MANAGEMENT S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS.

## The Company Is Subject to Lending Risk

There are inherent risks associated with the Company s lending activities. These risks include, among other things, the impact of changes in interest rates and changes in the economic conditions in the markets where the Company operates as well as those throughout the United States. Increases in interest rates and/or a return to weakening economic conditions could adversely impact the ability of borrowers to repay outstanding loans or the value of the collateral securing these loans. The Company is also subject to various laws and regulations that affect its lending activities. Failure to comply with applicable laws and regulations could subject the Company to regulatory enforcement action that could result in the assessment of significant civil money penalties against the Company. In addition, under various laws and regulations relating to mortgage lending and terms of various agreements the Company is a party to, the Company may be required to repurchase loans or indemnify loan purchasers as a result of breaches of representations and warranties, borrower fraud, or certain borrower defaults.

As of December 31, 2010, approximately 67.0% of the Company s loan portfolio consisted of commercial and industrial, factored receivables, construction and commercial real estate loans. These types of loans are generally viewed as having more risk of default than residential real estate loans or consumer loans. These types of loans are also typically larger than residential real estate loans and consumer loans. Because the Company s loan portfolio contains a significant number of commercial and industrial, construction and commercial real estate loans with relatively large balances, the deterioration of one or a few of these loans could cause a significant increase in non-performing loans. An increase in non-performing loans could result in a net loss of earnings from these loans, an increase in the provision for loan losses and an increase in loan charge-offs, all of which could have a

material adverse effect on the Company s financial condition and results of operations. Further, if repurchase and indemnity demands with respect to the Company s loan portfolio increase, its liquidity, results of operations and financial condition will be adversely affected. For further discussion related to commercial and industrial, construction and commercial real estate loans, see Loan Portfolio beginning on page 43 in MANAGEMENT S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS.

## The Company s Allowance for Loan Losses May Be Insufficient

The Company maintains an allowance for loan losses, which is a reserve established through a provision for loan losses charged to expense, that represents management s best estimate of probable losses that have been incurred within the existing portfolio of loans. The allowance, in the judgment of management, is necessary to reserve for estimated loan losses and risks inherent in the loan portfolio. The level of the allowance reflects management s continuing evaluation of industry concentrations; specific credit risks; loan loss experience; current loan portfolio quality; present economic, political and regulatory conditions and unidentified losses inherent in the current loan portfolio. The determination of the appropriate level of the allowance for loan losses inherently involves a high degree of subjectivity and requires the Company to make significant estimates of current credit risks and future trends, all of which may undergo material changes. Continuing deterioration of economic conditions affecting borrowers, new information regarding existing loans, identification of additional problem loans and other factors, both within and outside the Company s control, may require an increase in the allowance for loan losses. In addition, bank regulatory agencies periodically review the Company s allowance for loan losses and may require an increase in the provision for loan losses or the recognition of further loan charge-offs, based on judgments different than those of management. In addition, if charge-offs in future periods exceed the allowance for loan losses, the Company will need additional provisions to increase the allowance for loan losses. Any increases in the allowance for loan losses will result in a decrease in net income and, possibly, capital, and may have a material adverse effect on the Company s financial condition and results of operations. For further discussion related to the Company s process for determining the appropriate level of the allowance for loan losses, see Asset Quality beginning on page 44 in MANAGEMENT S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS.

# The Company May Not Be Able to Meet the Cash Flow Requirements of Its Depositors and Borrowers or Meet Its Operating Cash Needs to Fund Corporate Expansion and Other Activities

Liquidity is the ability to meet cash flow needs on a timely basis at a reasonable cost. The liquidity of the bank is used to make loans and leases and to repay deposit liabilities as they become due or are demanded by customers. Liquidity policies and limits are established by the board of directors. The overall liquidity position of the bank and the parent company are regularly monitored to ensure that various alternative strategies exist to cover unanticipated events that could affect liquidity. Funding sources include Federal funds purchased, securities sold under repurchase agreements and non-core deposits. The bank is a member of the Federal Home Loan Bank of New York, which provides funding through advances to members that are collateralized with mortgage-related assets. The Company maintains a portfolio of securities that can be used as a secondary source of liquidity. The bank also can borrow through the Federal Reserve Bank s discount window.

If the Company is unable to access any of these funding sources when needed, we might be unable to meet customers needs, which could adversely impact our financial condition, results of operations, cash flows, and level of regulatory-qualifying capital. For further discussion, see Liquidity Risk beginning on page 53 in MANAGEMENT S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS.

## The Parent Company Relies on Dividends from Its Subsidiaries

The parent company is a separate and distinct legal entity from its subsidiaries. It receives dividends from its subsidiaries. These dividends are the principal source of funds to pay dividends on the parent company s common stock and interest and principal on its debt. Various federal and/or state laws and regulations limit the amount of dividends that the bank and certain non-bank subsidiaries may pay to the parent company. Also, the parent company s right to participate in a distribution of assets upon a subsidiary s liquidation or reorganization is subject to the prior claims of the subsidiary s creditors. In the event the bank is unable to pay dividends to the parent company, the parent company may not be able to service debt, pay obligations or pay dividends on the parent company s common stock. The inability of the parent company to receive dividends from the bank could have a material adverse effect on the Company s business, financial condition and results of operations. See SUPERVISION AND REGULATION on pages 3 15 and Note 18 of the Company s consolidated financial statements.

## The Company May Need to Raise Additional Capital in the Future and Such Capital May Not Be Available When Needed or at All

The Company may need to raise additional capital in the future to provide it with sufficient capital resources and liquidity to meet its commitments and business needs, particularly if its asset quality or earnings were to deteriorate significantly. The Company s ability to raise additional capital, if needed, will depend on, among other things, conditions in the capital markets at that time, which are outside of the Company s control, and the Company s financial performance. Economic conditions and the loss of confidence in financial institutions may increase the Company s cost of funding and limit access to certain customary sources of capital, including inter-bank borrowings, repurchase agreements and borrowings from the Federal Reserve Bank s discount window.

The Company cannot assure that such capital will be available on acceptable terms or at all. Any occurrence that may limit the Company s access to the capital markets, such as a decline in the confidence of debt purchasers, depositors of the bank or counterparties participating in the capital markets, or a downgrade of the parent company or the bank s ratings, may adversely affect the Company s capital costs and its ability to raise capital and, in turn, its liquidity. Moreover, if the Company needs to raise capital in the future, it may have to do so when many other financial institutions are also seeking to raise capital and would have to compete with those institutions for investors. An inability to raise additional capital on acceptable terms when needed could have a materially adverse effect on the Company s businesses, financial condition and results of operations.

# The Parent Company s Agreements with the U.S. Treasury Impose Restrictions and Obligations on Us that Limit Our Ability to Increase Dividends, Repurchase the Parent Company s Common Shares or Preferred Shares and Access the Equity Capital Markets

In December 2008, the parent company issued preferred shares and a warrant to purchase our common shares to the U.S. Treasury as part of its TARP Capital Purchase Program. Prior to December 23, 2011, unless we have redeemed all the preferred shares or the U.S. Treasury has transferred all the preferred shares to a third party, the consent of the U.S. Treasury will be required for us to, among other things, increase the dividend on our common shares or repurchase our common shares or other preferred shares (with certain exceptions, including the repurchase of our common shares to offset share dilution from equity-based employee compensation awards). The parent company has also granted registration rights and offering facilitation rights to the U.S. Treasury pursuant to which the parent company has agreed to lock-up periods during which we would be unable to issue equity securities. In addition, unless we are able to redeem the preferred stock prior to December 24, 2013, the dividends on the preferred stock will increase substantially, from 5% to 9%. Depending on market conditions at the time, this increase in dividends could significantly impact our liquidity.

# Negative Perceptions Associated with the Company s Continued Participation in the U.S. Treasury s Capital Purchase Program May Adversely Affect Its Ability to Retain Customers, Attract Investors and Compete for New Business Opportunities

A number of financial institutions which participated in the TARP Capital Purchase Program have received approval from the U.S. Treasury to exit the program. These institutions have, or are in the process of, repurchasing the preferred stock and repurchasing or auctioning the warrant issued to the U.S. Treasury as part of the program. The Company has not yet requested the U.S. Treasury s approval to repurchase the preferred stock and warrant from the U.S. Treasury. In order to repurchase one or both securities, in whole or in part, the Company must establish that it has satisfied all of the conditions to repurchase and must obtain the approval of the U.S. Treasury. There can be no assurance that the Company will be able to repurchase these securities from the U.S. Treasury. The Company s customers, employees and counter-parties in its current and future business relationships may draw negative implications regarding the strength of the Company as a financial institution based on its continued participation in the program following the exit of one or more of its competitors or other financial institutions. Any such negative perceptions may impair the Company s business, financial condition and results of operations may be adversely affected, perhaps materially.

# The Company Is Subject to a Variety of Operational Risks, Including Reputational Risk, Legal and Compliance Risk, the Risk of Fraud or Theft by Employees or Outsiders

The Company is exposed to many types of operational risks, including reputational risk, legal and compliance risk, the risk of fraud or theft by employees or outsiders, unauthorized transactions by employees or operational errors, including clerical or record-keeping errors or those resulting from faulty or disabled computer or telecommunications systems. Negative public opinion can result from its actual or alleged conduct in any number of activities, including lending practices, corporate governance and acquisitions and from actions taken by government regulators and community organizations in response to those activities. Negative public opinion can adversely affect its ability to attract and keep customers and can expose the Company to litigation and regulatory action.

Actual or alleged conduct by the Company can result in negative public opinion about its other business. Negative public opinion could also affect its credit ratings, which are important to its access to unsecured wholesale borrowings.

Because the nature of the financial services business involves a high volume of transactions, certain errors may be repeated or compounded before they are discovered and successfully rectified. The Company s necessary dependence upon automated systems to record and process its transaction volume may further increase the risk that technical flaws or employee tampering or manipulation of those systems will result in losses that are difficult to detect. The Company also may be subject to disruptions of its operating systems arising from events that are wholly or partially beyond its control (for example, computer viruses or electrical or telecommunications outages), which may give rise to disruption of service to customers and to financial loss or liability. The Company is further exposed to the risk that its external vendors may be unable to fulfill their contractual obligations (or will be subject to the same risk of fraud or operational errors by their respective employees as the Company is) and to the risk that its (or its vendors ) business continuity and data security systems prove to be inadequate. The occurrence of any of these risks could result in a diminished ability of the Company to operate its business, potential liability to clients, reputational damage and regulatory intervention, which could adversely affect its business, financial condition and results of operations, perhaps materially.

## The Company Relies on Other Companies to Provide Key Components of Its Business Infrastructure.

Third parties provide key components of the Company s business infrastructure, for example, system support, and Internet connections and network access. While the Company has selected these third party vendors carefully, it does not control their actions. Any problems caused by these third parties, including those resulting from their failure to provide services for any reason or their poor performance of services, could adversely affect its ability to deliver products and services to its customers and otherwise conduct its business. Replacing these third party vendors could also entail significant delay and expense.

## The Company Is Subject to Environmental Liability Risk Associated with Lending Activities

A portion of the Company s loan portfolio is secured by real property. During the ordinary course of business, the Company may foreclose on and take title to properties securing certain loans. In doing so, there is a risk that hazardous or toxic substances could be found on these properties. If hazardous or toxic substances are found, the Company may be liable for remediation costs, as well as for personal injury and property damage. Environmental laws may require the Company to incur substantial expense and may materially reduce the affected property s value or limit the Company s ability to use or sell the affected property. Future laws or more stringent interpretations or enforcement policies with respect to existing laws may increase the Company s exposure to environmental liability. Although the Company has policies and procedures to perform an environmental review before initiating any foreclosure action on real property, these reviews may not be sufficient to detect all potential environmental hazards. The remediation costs and any other financial liabilities associated with an environmental hazard could have a material adverse effect on the Company s financial condition and results of operations.

## The Company s Profitability Depends Significantly on Local and Overall Economic Conditions

The Company s success depends significantly on the economic conditions of the communities it serves and the general economic conditions of the United States. The Company has operations in New York City and the New York metropolitan area, and conducts business in Virginia and other mid-Atlantic states, and throughout the United States. The economic conditions in these areas and throughout the United States have a significant impact on the demand for the Company s products and services as well as the ability of the Company s customers to repay loans, the value of the collateral securing loans and the stability of the Company s deposit funding sources. Poor economic conditions, whether caused by recession, inflation, unemployment, changes in securities markets, acts of terrorism, outbreak of hostilities or other international or domestic occurrences, acts of God or other factors could impact these local economic conditions and, in turn, have a material adverse effect on the Company s financial condition and results of operations.

## The Company May Be Adversely Affected by the Soundness of Other Financial Institutions

Financial services institutions are interrelated as a result of trading, clearing, counterparty or other relationships. The Company has exposure to many different industries and counterparties, and routinely executes transactions with counterparties in the financial services industry, including commercial banks, brokers and dealers, investment banks, and other institutional clients. Many of these transactions expose the Company to credit risk in the event of a default by a counterparty or client. In addition, the Company s credit risk may be exacerbated when the collateral held by the Company cannot be realized upon or is liquidated at prices not sufficient to recover the full amount of the credit, or

derivative, if any, exposure due to the Company. Any such losses could have a material adverse effect on the Company s financial condition and results of operations.

# Severe Weather, Natural Disasters or Other Acts of God, Acts of War or Terrorism and Other External Events Could Significantly Impact the Company s Business

Severe weather, natural disasters or other acts of God, acts of war or terrorism and other adverse external events could have a significant impact on the Company s ability to conduct business. Such events could affect the stability of the Company s deposit base, impair the ability of borrowers to repay outstanding loans, impair the value of collateral securing loans, cause significant property damage, result in loss of revenue and/or cause the Company to incur additional expenses. Although management has established disaster recovery policies and procedures, the occurrence of any such event could have a material adverse effect on the Company s business, which, in turn, could have a material adverse effect on the Company s financial condition and results of operations.

## The Company Operates in a Highly Competitive Industry and Market Area

The Company faces substantial competition in all areas of its operations from a variety of different competitors, many of which are larger and may have more financial resources. Such competitors primarily include national, regional, and community banks within the various markets the Company operates. Additionally, various out-of-state banks have entered the market areas in which the Company currently operates. The Company also faces competition from many other types of financial institutions, including, without limitation, savings and loan associations, credit unions, finance companies, brokerage firms, insurance companies, factoring companies and other financial intermediaries. The financial services industry could become even more competitive as a result of legislative, regulatory and technological changes and continued consolidation. Also, technology and other changes have lowered barriers to entry and made it possible for non-banks to offer products and services traditionally provided by banks. For example, consumers can maintain funds that would have historically been held as bank deposits in brokerage accounts or mutual funds. Consumers can also complete transactions such as paying bills and/or transferring funds directly without the assistance of banks. The process of eliminating banks as intermediaries, known as disintermediation, could result in the loss of fee income, as well as the loss of customer deposits and the related income generated from those deposits. Many of the Company s competitors have fewer regulatory constraints and may have lower cost structures. Additionally, due to their size, many competitors may be able to achieve economies of scale and, as a result, may offer a broader range of products and services as well as better pricing for those products and services than the Company does.

The Company s ability to compete successfully depends on a number of factors, including, among other things:

The ability to develop, maintain and build upon customer relationships based on top quality service, high ethical standards and safe, sound assets.

The ability to expand the Company s market position.

The scope, relevance and pricing of products and services offered to meet customer needs and demands.

The rate at which the Company introduces new products and services relative to its competitors.

Customer satisfaction with the Company s level of service.

Industry and general economic trends.

Failure to perform in any of these areas could significantly weaken the Company s competitive position, which could adversely affect the Company s growth and profitability, which, in turn, could have a material adverse effect on the Company s financial condition and results of operations.

## The Company Is Subject to Extensive Government Regulation and Supervision

The Company, primarily through the parent company and the bank and certain non-bank subsidiaries, is subject to extensive federal and state regulation and supervision. Banking regulations are primarily intended to protect depositors funds, federal deposit insurance funds and the banking system as a whole, not shareholders. These regulations affect the Company s lending practices, capital structure, investment practices, dividend policy and growth, among other things. Congress and federal regulatory agencies continually review banking laws, regulations and policies for possible changes. The Dodd-Frank Act, enacted in July 2010, instituted major changes to the banking and financial institutions regulatory regimes in the near future in light of the recent performance of and government intervention in the financial services sector. Other changes to statutes, regulations or regulatory policies, including changes in interpretation or implementation of statutes, regulations or policies, could affect the Company in substantial and unpredictable ways. Such changes could subject the Company to additional costs, limit the types of financial services and products the Company may offer and/or increase the ability of non-banks to offer competing financial services and products, among other things. Failure to comply with laws, regulations or policies could result in sanctions by regulatory agencies, civil money

penalties and/or reputation damage, which could have a material adverse effect on the Company s business, financial condition and results of operations. While the Company has policies and procedures designed to prevent any such violations, there can be no

assurance that such violations will not occur. See SUPERVISION AND REGULATION on pages 3 15.

## Increases in FDIC Insurance Premiums May Adversely Affect the Company s Earnings

Since 2008, higher levels of bank failures have dramatically increased resolution costs of the FDIC and depleted the Deposit Insurance Fund. In addition, the FDIC instituted two temporary programs to further insure customer deposits at FDIC insured banks: deposit accounts are currently insured up to \$250,000 per customer (up from \$100,000) and non-interest bearing transactional accounts at institutions participating in the Transaction Account Guarantee Program are currently fully insured (unlimited coverage). These programs have placed additional stress on the Deposit Insurance Fund.

In order to maintain a strong funding position and restore reserve ratios of the Deposit Insurance Fund, the FDIC has increased assessment rates of insured institutions. In addition, on November 12, 2009, the FDIC adopted a rule requiring banks to prepay three years worth of premiums to replenish the depleted fund.

The Company is generally unable to control the amount of premiums that it is required to pay for FDIC insurance. If there are additional bank or financial institution failures the Company may be required to pay even higher FDIC premiums than the recently increased levels. Such increases and any future increases or required prepayments of FDIC insurance premiums may adversely impact its earnings.

## The Company s Controls and Procedures May Fail or Be Circumvented

The Company s internal controls, disclosure controls and procedures, and corporate governance policies and procedures can provide only reasonable, not absolute, assurances that the objectives of the system are met. Any failure or circumvention of the Company s controls and procedures or failure to comply with regulations related to controls and procedures could have a material adverse effect on the Company s business, results of operations and financial condition.

# The Company May Be Subject to a Higher Effective Tax Rate if Sterling Real Estate Holding Company, Inc. Fails to Qualify as a Real Estate Investment Trust ( REIT )

Sterling Real Estate Holding Company Inc. (SREHC) operates as a REIT for federal income tax purposes. SREHC was established to acquire, hold and manage mortgage assets and other authorized investments to generate net income for distribution to its shareholders.

For an entity to qualify as a REIT, it must satisfy the following six asset tests under the Internal Revenue Code each quarter: (1) 75% of the value of the REIT s total assets must consist of real estate assets, cash and cash items, and government securities; (2) not more than 25% of the value of the REIT s total assets may consist of securities, other than those includible under the 75% test; (3) not more than 5% of the value of its total assets may consist of securities of any one issuer, other than those securities includible under the 75% test or securities of taxable REIT subsidiaries; (5) not more than 10% of the total value of the outstanding securities of any one issuer may be held, other than those securities includible under the 75% test or securities of any one issuer may be held, other than those securities includible under the 75% test or securities of any one issuer may be held, other than those securities includible under the 75% test or securities of any one issuer may be held, other than those securities includible under the 75% test or securities of any one issuer may be held, other than those securities includible under the 75% test or securities includible under the 75% test or securities of any one issuer may be held, other than those securities includible under the 75% test or securities of any one issuer may be held, other than those securities includible under the 75% test or securities; and (6) a REIT cannot own securities in one or more taxable REIT subsidiaries; which comprise more than 25% of its total assets. At December 31, 2010, SREHC met all six quarterly asset tests.

Also, a REIT must satisfy the following two gross income tests each year: (1) 75% of its gross income must be from qualifying income closely connected with real estate activities; and (2) 95% of its gross income must be derived from sources qualifying for the 75% test plus dividends, interest, and gains from the sale of securities. In addition, a REIT must distribute at least 90% of its taxable income for the taxable year, excluding any net capital gains, to maintain its non-taxable status for federal income tax purposes. For 2010, SREHC had met the two annual income tests and the distribution test.

If SREHC fails to meet any of the required provisions and, therefore, does not qualify to be a REIT, the Company s effective tax rate would increase.

# The Company Would Be Subject to a Higher Effective Tax Rate if Sterling Real Estate Holding Company, Inc. Is Required to Be Included in a New York Combined Return

New York State tax law generally requires a REIT that is majority owned by a New York State bank to be included in the bank s combined New York State tax return. The Company believes that it qualifies for the small-bank exception to this rule. If, contrary to this belief, Sterling Real Estate Holding Company, Inc. were required to be included in the Company s New York State combined tax return, the Company s effective tax rate would increase.

Under the small-bank exception, dividends received by the bank from SREHC, a real estate investment trust, are subject to a 60% dividends-received deduction, which results in only 40% of the dividends being subject to New York State tax. Currently, the New York City banking corporation tax operates in the same manner in this respect. The possible reform of the New York State franchise and banking corporation tax laws mentioned below could require SREHC to file a combined New

York State return with the Company and substantially eliminate the benefit of the 60% dividends-received deduction by causing generally all of SREHC s income to be subject to New York State tax as part of the Company s combined return.

#### Possible New York State Legislative Changes May Negatively Affect the Amount of Taxes We Pay in Future Years

In 2009 and 2010, the New York State Department of Taxation and Finance developed a detailed proposal to reform the New York State corporate franchise and banking laws. If that released proposal were enacted, it would substantially alter how the Company and the bank are taxed in New York State and could materially increase their combined effective New York State tax rate. In particular, that proposal would require SREHC to file a combined New York State return with the Company and substantially eliminate the benefit of the 60% dividends-received deduction by causing generally all of SREHC s income to be subject to New York State tax as part of the Company s combined return.

It is not possible to predict whether any tax reform legislation will actually be proposed in the New York State legislature, whether any such legislation would be enacted this year or any subsequent year, how any enacted legislation would differ from the current law or the 2010 proposal released by the Department of Taxation and Finance, and how any such legislative changes would impact the Company and the bank s effective New York State tax rate. It is also uncertain at this time whether there would be any similar changes made to the New York City banking corporation tax.

#### The Recent Repeal of Federal Prohibitions on Payment of Interest on Demand Deposits Could Increase the Company s Interest Expense.

All federal prohibitions on the ability of financial institutions to pay interest on demand deposit accounts were repealed as part of the Dodd-Frank Act. As a result, beginning on July 21, 2011, financial institutions could commence offering interest on demand deposits to compete for clients. The Company does not yet know what interest rates other institutions may offer. The Company s interest expense will increase and its net interest margin will decrease if it begins offering interest on demand deposits to attract additional customers or maintain current customers, which could have a material adverse effect on the Company s business, financial condition and results of operations.

#### New Lines of Business or New Products and Services May Subject the Company to Additional Risks

The Company may implement new lines of business or offer new products and services within existing lines of business. There are substantial risks and uncertainties associated with these efforts, particularly in instances where the markets are not fully developed. In developing and marketing new lines of business and/or new products and services, the Company may invest significant time and resources. Initial timetables for the introduction and development of new lines of business and/or new products or services may not be achieved and price and profitability targets may not prove feasible. External factors, such as compliance with regulations, competitive alternatives, and shifting market preferences, may also impact the successful implementation of a new line of business or a new product or service. Furthermore, any new line of business and/or new product or service could have a significant impact on the effectiveness of the Company system of internal controls. Failure to manage these risks successfully in the development and implementation of new lines of business or new products or services could have a material adverse effect on the Company s business, results of operations and financial condition.

#### Potential Acquisitions May Disrupt the Company s Business and Dilute Shareholder Value

The Company seeks merger or acquisition partners that are compatible and have experienced management and possess either significant market presence or have potential for improved profitability through financial management, economies of scale or expanded services. Acquiring other banks, businesses, or branches involves various risks commonly associated with acquisitions, including, among other things:

Potential exposure to unknown or contingent liabilities of the target company.

Exposure to potential asset quality issues of the target company.

Difficulty and expense of integrating the operations and personnel of the target company.

Potential disruption to the Company s business.

Potential diversion of the Company s management time and attention.

The possible loss of key employees and customers of the target company.

Difficulty in estimating the value of the target company.

Potential changes in banking or tax laws or regulations that may affect the target company.

The Company regularly evaluates merger and acquisition opportunities and conducts due diligence activities related to possible transactions with other financial institutions and financial services companies. As a result, merger or acquisition discussions and, in some cases, negotiations may take place and future mergers or acquisitions involving cash, debt or equity securities may occur at any time. Acquisitions typically

involve the payment of a premium over book and market values, and, therefore, some dilution of the Company s tangible book value and net income per common share may occur in connection with any future transaction. Furthermore, failure to realize the expected revenue increases, cost savings, increases in geographic or product presence, and/or other projected benefits from an acquisition could have a material adverse effect on the Company s financial condition and results of operations.

#### The Company May Not Be Able to Attract and Retain Skilled People

The Company s success depends, in large part, on its ability to attract and retain key people. Competition for the best people in most activities engaged in by the Company can be intense, and the Company may not be able to hire people or to retain them. The unexpected loss of services of one or more of the Company s key personnel could have a material adverse impact on the Company s business because of their skills, knowledge of the Company s market, years of industry experience and the difficulty of promptly finding qualified replacement personnel. The Company has employment agreements with two of its senior officers.

Because the Company has not yet repurchased the U.S. Treasury s TARP Capital Purchase Program investment, it remains subject to the restrictions on incentive compensation contained in the ARRA. On June 10, 2009, the U.S. Treasury released its interim final rule implementing the provisions of the ARRA and limiting the compensation practices at institutions in which the U.S. Treasury is invested. Financial institutions which have repurchased the U.S. Treasury s investment are relieved of the restrictions imposed by the ARRA and its implementing regulations. Due to these restrictions, the Company may not be able to successfully compete with financial institutions that have repurchased the U.S. Treasury s investment to retain and attract high performing employees. If this were to occur, the Company s business, financial condition and results of operations could be adversely affected, perhaps materially.

#### The Company s Information Systems May Experience an Interruption or Breach in Security

The Company relies heavily on communications and information systems to conduct its business. Any failure, interruption or breach in security of these systems could result in failures or disruptions in the Company s customer relationship management, general ledger, deposit, loan and other systems. While the Company has policies and procedures designed to prevent or limit the effect of the failure, interruption or security breach of its information systems, there can be no assurance that any such failures, interruptions or security breaches will not occur or, if they do occur, that they will be adequately addressed. The occurrence of any failures, interruptions or security breaches of the Company s information systems could damage the Company s reputation, result in a loss of customer business, subject the Company to additional regulatory scrutiny, or expose the Company to civil litigation and possible financial liability, any of which could have a material adverse effect on the Company s reputation, financial condition and results of operations.

#### The Company Depends on the Accuracy and Completeness of Information About Customers and Counterparties

In deciding whether to extend credit or enter into other transactions, the Company may rely on information furnished by or on behalf of customers and counterparties, including financial statements, credit reports and other financial information. The Company may also rely on representations of those customers, counterparties or other third parties, such as independent auditors, as to the accuracy and completeness of that information. Reliance on inaccurate or misleading financial statements, credit reports or other financial information could have a material adverse impact on the Company s business and, in turn, the Company s financial condition and results of operations.

#### The Company Continually Encounters Technological Change

The financial services industry is continually undergoing rapid technological change with frequent introductions of new technology-driven products and services. The Company s future success depends, in part, upon its ability to address the needs of customers by using technology to provide products and services that will satisfy customer demands, as well as to create additional efficiencies in the Company s operations. Many of the Company s competitors have substantially greater resources to invest in technological improvements. The Company may not be able to implement effectively new technology-driven products and services or be successful in marketing these products and services to its customers. Failure to keep pace successfully with technological change affecting the financial services industry could have a material adverse impact on the Company s business and, in turn, the Company s financial condition and results of operations.

#### The Company Is Subject to Claims and Litigation Pertaining to Fiduciary Responsibility and Lender Liability

From time to time, customers make claims and take legal action pertaining to the Company s performance of its fiduciary responsibilities. Whether customer claims and legal action related to the Company s performance of its fiduciary

responsibilities are founded or unfounded, if such claims and legal actions are not resolved in a manner favorable to the Company they may result in significant financial liability and/or adversely affect the market perception of the Company and its products and services as well as impact customer demand for those products and services. Any fiduciary liability or reputation damage could have a material adverse effect on the Company s business, which, in turn, could have a material adverse effect on the Company s financial condition and results of operations.

In addition, in recent years, a number of judicial decisions have upheld the right of borrowers to sue lending institutions on the basis of various evolving legal theories, collectively termed lender liability. Generally, lender liability is founded on the premise that a lender has either violated a duty, whether implied or contractual, of good faith and fair dealing owed to the borrower or has assumed a degree of control over the borrower resulting in the creation of a fiduciary duty owed to the borrower or its other creditors or shareholders. Substantial legal liability or significant regulatory action against the Company or its subsidiaries could materially adversely affect its business, financial condition or results of operations and/or cause significant harm to its reputation.

# The Company's Reported Financial Results Depend on Management's Selection of Accounting Methods and Certain Assumptions and Estimates

The Company s accounting policies and methods are fundamental to the methods by which the Company records and reports its financial condition and results of operations. Its management must exercise judgment in selecting and applying many of these accounting policies and methods so they comply with generally accepted accounting principles and reflect management s judgment of the most appropriate manner to report its financial condition and results. In some cases, management must select the accounting policy or method to apply from two or more alternatives, any of which may be reasonable under the circumstances, yet may result in its reporting materially different results than would have been reported under a different alternative.

Certain accounting policies are critical to presenting its financial condition and results. They require management to make difficult, subjective or complex judgments about matters that are uncertain. Materially different amounts could be reported under different conditions or using different assumptions or estimates. These critical accounting policies include: the allowance for credit losses; the determination of fair value for financial instruments; the valuation of goodwill and other intangible assets; the accounting for pension and post-retirement benefits and the accounting for income taxes. Because of the uncertainty of estimates involved in these matters, the Company may be required to do one or more of the following: significantly increase the allowance for credit losses and/or sustain credit losses that are significantly higher than the reserve provided; recognize significant impairment on its goodwill and other intangible asset balances; or significantly increase its accrued tax liability.

# Changes in the Company s Accounting Policies or in Accounting Standards Could Materially Affect How the Company Reports Its Financial Results and Condition

From time to time, the Financial Accounting Standards Board (FASB) and SEC change the financial accounting and reporting standards that govern the preparation of the Company s financial statements. These changes can be hard to predict and can materially impact how the Company records and reports its financial condition and results of operations. In some cases, the Company could be required to apply a new or revised standard retroactively, resulting in the Company restating prior period financial statements.

#### RISKS ASSOCIATED WITH THE PARENT COMPANY S COMMON SHARES

#### The Parent Company s Share Price Can Be Volatile

Share price volatility may make it more difficult to resell the parent company s common shares when desired and at an attractive price. The parent company s share price can fluctuate significantly in response to a variety of factors, including, among other factors:

Actual or anticipated variations in quarterly results of operations.

Recommendations by securities analysts.

Expectation of or actual equity dilution.

Operating and share price performance of other companies that investors deem comparable to the Company.

News reports relating to trends, concerns and other issues in the financial services industry.

Perceptions in the marketplace regarding the Company and/or its competitors.

New technology used, or services offered, by competitors.

Significant acquisitions or business combinations, strategic partnerships, joint ventures or capital commitments by or involving the Company or its competitors.

Failure to integrate acquisitions or realize anticipated benefits from acquisitions.

Changes in government regulation.

Geopolitical conditions such as acts or threats of terrorism or military conflicts.

General market fluctuations, industry factors and general economic and political conditions and events, such as economic slowdowns or recessions, interest rate changes or credit loss trends, could also cause the parent company s share price to decrease regardless of operating results.

#### The Trading Volume in the Parent Company s Common Shares Is Less Than That of Other Larger Financial Services Companies

Although the parent company s common shares are listed for trading on the NYSE, the trading volume in its common shares is less than that of other larger financial services companies. A public trading market having the desired characteristics of depth, liquidity and orderliness depends on the presence in the marketplace of willing buyers and sellers of the parent company s common shares at any given time. This presence depends on the individual decisions of investors and general economic and market conditions over which the Company has no control. Given the trading volume of the parent company s common shares, significant sales of the parent company s common shares, or the expectation of these sales, could cause the parent company s share price to fall.

#### An Investment in the Parent Company s Common Shares Is Not an Insured Deposit

The parent company s common shares are not bank deposits and, therefore, are not insured against loss by the Federal Deposit Insurance Corporation, any other deposit insurance fund or by any other public or private entity. Investment in the parent company s common shares are inherently risky for the reasons described in this Risk Factors section and elsewhere in this report and is subject to the same market forces that affect the price of common shares in any company. As a result, if you acquire the parent company s common shares, you may lose some or all of your investment.

#### The Parent Company s Certificate of Incorporation and By-Laws as Well as Certain Banking Laws May Have an Anti-Takeover Effect

Provisions of the parent company s certificate of incorporation and by-laws, and federal banking laws, including regulatory approval requirements, could make it more difficult for a third party to acquire the parent company, even if doing so would be perceived to be beneficial to the parent company s shareholders. The combination of these provisions effectively inhibits a non-negotiated merger or other business combination, which, in turn, could adversely affect the market price of the parent company s common shares.

#### The Parent Company May Not Pay Dividends on Its Common Shares

Holders of shares of the parent company s common shares are only entitled to receive such dividends as its board of directors may declare out of funds legally available for such payments. Although the parent company has historically declared cash dividends on its common shares, it is not required to do so and may reduce or eliminate its common share dividend in the future. This could adversely affect the market price of its common shares. Also, participation in the TARP Capital Purchase Program limits its ability to increase its dividend or to repurchase its common shares for so long as any securities issued under such program remain outstanding.

# Future Issuances of Additional Common Shares or Other Equity Securities Could Result in Dilution of Ownership of the Parent Company s Existing Shareholders

The parent company may from time to time explore capital raising opportunities and may determine to issue additional common shares or other equity securities to increase its capital, support growth, or to make acquisitions. We intend to take advantage of favorable market conditions to increase our capital and, subject to regulatory approvals, seek to repurchase our Series A Preferred Shares, separately or together, with the warrant to purchase common shares held by the U.S. Treasury. Further, the parent company may issue stock options or other stock grants to retain and motivate its employees. These issuances of equity securities could dilute the voting and economic interests of its existing shareholders.

#### ITEM 1B. UNRESOLVED STAFF COMMENTS

None.

#### **ITEM 2. PROPERTIES**

The principal office of the Company occupies one floor at 650 Fifth Avenue, New York, N.Y., consisting of approximately 14,400 square feet. The lease for this office expires April 30, 2016. Rental commitments to the expiration date approximate \$4.7 million.

At December 31, 2010, the bank also maintains operating leases for ten branch offices, the International Banking Facility, and additional space in New York City, Nassau, Suffolk and Westchester counties (New York) with an aggregate of approximately 139 thousand square feet. Effective in 2011, certain lease agreements terminate and the bank has entered into new agreements for additional space, bringing the amount of space committed to an aggregate of approximately 133 thousand square feet. The aggregate office rental commitments for these premises,

including the new space under lease in 2011, approximates \$45.0 million. These leases have expiration dates ranging from 2011 through 2025 with varying renewal options. The bank owns free and clear (not subject to a mortgage) a building in which it maintains a branch located in Forest Hills, Queens, N.Y.

#### **ITEM 3. LEGAL PROCEEDINGS**

In the normal course of business there are various legal proceedings pending against the Company. Management, after consulting with counsel, is of the opinion that there should be no material liability with respect to such proceedings and accordingly no provision has been made in the Company s consolidated financial statements.

#### ITEM 4. SUBMISSION OF MATTERS TO A VOTE OF SECURITY HOLDERS

No matter was submitted to a vote of security holders in the fourth quarter of the fiscal year covered by this report.

#### EXECUTIVE OFFICERS OF THE REGISTRANT

This table sets forth information regarding the parent company s executive officers:

Name of Executive	Title	Age	Held Executive Office Since
Louis J. Cappelli	Chairman of the Board and Chief Executive Officer, Director	80	1967
John C. Millman	President, Director	68	1986
John W. Tietjen	Executive Vice President and Chief Financial Officer	66	1989
Howard M. Applebaum	Senior Vice President	52	2002
Eliot S. Robinson	Executive Vice President of Sterling National Bank	68	1998

All executive officers who are employees of the parent company are elected annually by the Board of Directors and serve at the pleasure of the Board. The executive officer who is not an employee of the parent company is elected annually by, and serves at the pleasure of, the Board of Directors of the bank. There are no arrangements or understandings between any of the foregoing executive officers and any other person or persons pursuant to which he was selected as an executive officer.

The Company s 2010 Domestic Company Section 303A Annual CEO Certification was filed (without qualifications) with the NYSE. The certifications under Section 302 of the Sarbanes-Oxley Act are filed as exhibits to this annual report on Form 10-K.

#### PART II

# ITEM 5. MARKET FOR THE REGISTRANT S COMMON EQUITY, RELATED SHAREHOLDER MATTERS AND ISSUER PURCHASES OF EQUITY SECURITIES

The parent company s common shares are traded on the NYSE under the symbol STL. Information regarding the quarterly prices of the common shares is presented in Note 28 on page 113. Information regarding the average common shares outstanding and dividends per common share is presented in the Consolidated Statements of Income on page 59. Information regarding legal restrictions on the ability of the bank to pay dividends is presented in Note 18 on page 93. Although such restrictions do not apply to the payment of dividends by the parent company to its shareholders, such dividends may be limited by other factors, such as the requirement to maintain adequate capital under the risk-based capital regulations described in Note 24 beginning on page 107. As of February 14, 2011, there were 1,273 shareholders of record of our common shares.

Pursuant to the U.S. Treasury s TARP Capital Purchase Program, until the earliest of December 23, 2011, the redemption of all of the Series A Preferred Shares or transfer by the U.S. Treasury of all of the Series A Preferred shares to third parties, the parent company must obtain the consent of the U.S. Treasury to raise the dividend on our common shares or to repurchase any common shares or other preferred shares, with certain exceptions (including repurchases of our common shares under our share repurchase program to offset dilution from equity-based compensation).

During the fiscal years ended December 31, 2010 and 2009, the following dividends were declared on our common shares:

Cash Dividends Per Share	2010	2009
First Quarter	\$ 0.09	\$ 0.19
Second Quarter	0.09	0.19
Third Quarter	0.09	0.09
Fourth Quarter	0.09	0.09
Total	\$ 0.36	\$ 0.56

The Board of Directors initially authorized the repurchase of common shares in 1997 and since then has approved increases in the number of common shares that the parent company is authorized to repurchase. The latest increase was announced on February 15, 2007, when the Board of Directors increased the Company s authority to repurchase common shares by an additional 800,000 shares. This increased the Company s authority to repurchase shares to approximately 933,000 common shares.

Under its share repurchase program, the Company buys back common shares from time to time. The Company did not repurchase any of its common shares during the fourth quarter of 2010. At December 31, 2010, the maximum number of shares that may yet be repurchased under the share repurchase program was 870,963.

For information regarding securities authorized for issuance under the Company s equity compensation plan, see Item 12 on page 119. The following performance graph compares for the fiscal years ended December 31, 2006, 2007, 2008, 2009 and 2010 (a) the yearly cumulative total shareholder return (i.e., the change in share price plus the cumulative amount of dividends, assuming dividend reinvestment, divided by the initial share price, expressed as a percentage) on Sterling s common shares, with (b) the cumulative total return of the Standard & Poor s 500 Stock Index, with (c) the cumulative total return on the KBW Regional Banks Index (a market-capitalization weighted bank-stock index), and with (d) the cumulative total return on the KBW 50 index (a market-capitalization weighted bank-stock index):

	12/05	12/06	12/07	12/08	12/09	12/10
Sterling Bancorp	100	103.87	75.62	82.26	44.84	68.31
S&P 500	100	115.80	122.16	79.96	97.33	111.99
KBW Regional Banks	100	108.56	84.71	68.99	53.72	64.68
KBW 50	100	119.20	91.76	50.00	50.57	*
*Index discontinued by KBW as of 12/31/09.						

#### ITEM 6. SELECTED FINANCIAL DATA

The information appears on page 31. All such information should be read in conjunction with the consolidated financial statements and notes thereto.

#### ITEM 7. MANAGEMENT S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

The information appears on pages 32 56 and supplementary quarterly data appears in Note 28 of the Company s consolidated financial statements. All such information should be read in conjunction with the consolidated financial statements and the notes thereto.

#### ITEM 7A. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

The information appears on pages 52 55 under the caption ASSET/LIABILITY MANAGEMENT. All such information should be read in conjunction with the consolidated financial statements and notes thereto.

[2] In this calculation, the term loans means loans held for sale and loans held in portfolio.

[3] In this calculation, the term loans means loans held in portfolio.

#### Sterling Bancorp MANAGEMENT S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

The following commentary presents management s discussion and analysis of the financial condition and results of operations of Sterling Bancorp (the parent company ), a financial holding company under the Bank Holding Company Act of 1956, as amended by the Gramm-Leach-Bliley Act of 1999, and its subsidiaries, principally Sterling National Bank. Throughout this discussion and analysis, the term the Company refers to Sterling Bancorp and its subsidiaries and the term the bank refers to Sterling National Bank and its subsidiaries. This discussion and analysis should be read in conjunction with the consolidated financial statements and selected financial data contained elsewhere in this annual report. Certain reclassifications have been made to prior years financial data to conform to current financial statement presentations. Throughout management s discussion and analysis of financial condition and results of operations, dollar amounts in tables are presented in thousands, except per share data.

#### FORWARD-LOOKING STATEMENTS AND FACTORS THAT COULD AFFECT FUTURE RESULTS

Certain statements contained or incorporated by reference in this annual report on Form 10-K, including but not limited to, statements concerning future results of operations or financial position, borrowing capacity and future liquidity, future investment results, future credit exposure, future loan losses and plans and objectives for future operations, economic environment and other statements contained herein regarding matters that are not historical facts, are forward-looking statements as defined in the Securities Exchange Act of 1934. These statements are not historical facts but instead are subject to numerous assumptions, risks and uncertainties, and represent only our belief regarding future events, many of which, by their nature, are inherently uncertain and outside our control. Any forward-looking statements the Company may make speak only as of the date on which such statements are made. Our actual results and financial position may differ materially from the anticipated results and financial condition indicated in or implied by these forward-looking statements, and the Company makes no commitment to update or revise forward-looking statements in order to reflect new information or subsequent events or changes in expectations.

Factors that could cause our actual results to differ materially from those in the forward-looking statements include, but are not limited to, the following: inflation, interest rates, market and monetary fluctuations; geopolitical developments including acts of war and terrorism and their impact on economic conditions; the effects of, and changes in, trade, monetary and fiscal policies and laws, including interest rate policies of the Federal Reserve Board; changes, particularly declines, in general economic conditions and in the local economies in which the Company operates; the financial condition of the Company s borrowers; competitive pressures on loan and deposit pricing and demand; changes in technology and their impact on the marketing of new products and services and the acceptance of these products and services by new and existing customers; the willingness of customers to substitute competitors products and services for the Company s products and services; the impact of changes in financial services laws and regulations (including laws concerning taxes, banking, securities and insurance); changes in accounting principles, policies and guidelines; the risks and uncertainties described in ITEM 1A. RISK FACTORS on pages 17–27; other risks and uncertainties described from time to time in press releases and other public filings; and the Company s performance in managing the risks involved in any of the foregoing. The foregoing list of important factors is not exclusive, and the Company will not update any forward-looking statement, whether written or oral, that may be made from time to time.

#### RECENT MARKET DEVELOPMENTS

In response to the financial crises affecting the banking system and financial markets and going concern threats to investment banks and other financial institutions, on October 3, 2008, the Emergency Economic Stabilization Act of 2008 (the EESA) was signed into law. Pursuant to EESA, the United States Department of the Treasury (the U.S. Treasury) was given the authority to, among other things, purchase up to \$700 billion of mortgages, mortgage-backed securities and certain other financial instruments from financial institutions for the purpose of stabilizing and providing liquidity to the U.S. financial markets.

On October 14, 2008, the Secretary of the Department of the Treasury announced that the U.S. Treasury will purchase equity stakes in a wide variety of banks and thrifts. Under the program, known as the Troubled Asset Relief Program (TARP) Capital Purchase Program, from the \$700 billion authorized by EESA, the U.S. Treasury made \$250 billion of capital available to U.S. financial institutions in the form of preferred stock. In conjunction with the purchase of preferred stock, the U.S. Treasury received, from participating financial institutions, warrants to purchase common stock with an aggregate market price equal to 15% of the preferred investment. Participating financial institutions were required to adopt the U.S. Treasury standards for executive compensation and corporate governance for the period during which the U.S. Treasury holds equity issued under the TARP Capital Purchase Program. On December 23, 2008, the Company

elected to participate in the TARP Capital Purchase Program, under which the Company issued preferred shares and a warrant to purchase common shares to the U.S. Treasury. As of the date of this report, the Company has not yet repurchased the preferred stock or the warrant to purchase common stock.

On November 21, 2008, the Board of Directors of the FDIC adopted a final rule relating to the Temporary Liquidity Guarantee Program (TLG Program). The TLG Program was announced by the FDIC on October 14, 2008, preceded by the determination of systemic risk by the Secretary of the Department of Treasury (after consultation with the President), as an initiative to counter the system-wide crisis in the nation s financial sector. Under the TLG Program (as amended from time to time thereafter) the FDIC would (i) guarantee, through the earlier of maturity or June 30, 2012, certain newly issued senior unsecured debt issued by participating institutions and (ii) provide full FDIC deposit insurance coverage for non-interest bearing transaction deposit accounts, Negotiable Order of Withdrawal (NOW) accounts paying less than 0.5% interest per annum and Interest on Lawyers Trust Accounts (IOLA) accounts held at participating FDIC-insured institutions. The transaction account guarantee program described in clause (ii) will expire on June 30, 2010. Coverage under the TLG Program was available for the first 30 days without charge. The fee assessment for coverage of senior unsecured debt ranges from 50 basis points to 100 basis points per annum, depending on the initial maturity of the debt. The fee assessment for deposit insurance coverage is 10 basis points per quarter on amounts in covered accounts exceeding \$250,000. The Company elected to opt out of the debt guarantee program under the TLG Program, which may disadvantage the Company in its access to less expensive capital compared to the Company s competitors that did not opt out.

On February 10, 2009, the Treasury Secretary announced a new comprehensive financial stability plan which included: (i) a capital assistance program that has invested in convertible preferred stock of certain qualifying institutions, (ii) a consumer and business lending initiative to fund new consumer loans, small business loans and commercial mortgage asset-backed securities issuances, (iii) a public-private investment fund intended to leverage public and private capital with public financing to purchase legacy toxic assets from financial institutions, and (iv) assistance for homeowners to reduce mortgage payments and interest rates and establishing loan modification guidelines for government and private programs.

In response to concerns relating to capital adequacy of large financial institutions, the Federal Reserve Board implemented Supervisory Capital Assessment Program (SCAP) under which all banking institutions with assets over \$100 billion were required to undergo a comprehensive stress test to determine if they had sufficient capital to continue lending and to absorb losses that could result from a more severe decline in the economy than projected. The results of the stress test were announced on May 7, 2009. In addition, on September 3, 2009, the U.S. Treasury issued a policy statement relating to bank capital requirements, which calls for higher and stronger capital requirements for bank and non-bank financial firms that are deemed to pose a risk to financial stability due to their combination of size, leverage, interconnectedness and liquidity risk. Also, on December 17, 2009, the Basel Committee issued a set of proposals relating to the capital adequacy and liquidity risk exposures of financial institutions.

In order to restore the depleted Deposit Insurance Fund and maintain a sound reserve ratio, the FDIC imposed higher base assessment rates and special one-time assessments and required prepayment of deposit insurance premium. The FDIC stated that, after its semi-annual reviews, it may further increase assessment rates or take other actions to bring the Deposit Insurance Fund s reserve ratio back to a desirable level.

In June of 2009, the Obama administration proposed a wide range of regulatory reforms that included, among other things, proposals (i) that any financial firm whose combination of size, leverage and interconnectedness could pose a threat to financial stability be subject to certain enhanced regulatory requirements, (ii) that federal bank regulators require loan originators or sponsors to retain part of the credit risk of securitized exposures, (iii) that there be increased regulation of broker-dealers and investment advisers, (iv) for the creation of a federal consumer financial protection agency that would, among other things, be charged with applying consistent regulations to similar products (such as imposing certain notice and consent requirements on consumer overdraft lines of credit), (v) that there be tightened, and (vii) that financial holding companies be required to be well-capitalized and well-managed on a consolidated basis.

On October 22, 2009, the Federal Reserve Board issued a comprehensive proposal on incentive compensation policies intended to ensure that the incentive compensation policies of banking organizations do not undermine the safety and soundness of such organizations by encouraging excessive risk-taking. The proposal covers all employees that have the ability to materially affect the risk profile of an organization, either individually or as part of a group.

For more detailed discussion on recent legislative and regulatory developments, see SUPERVISION AND REGULATION on pages 3 15.

#### CRITICAL ACCOUNTING POLICIES AND ESTIMATES

The accounting and reporting policies followed by the Company conform, in all material respects, to U.S. generally accepted accounting principles (U.S. GAAP). In preparing the consolidated financial statements, management has made estimates, assumptions and judgments based on information available as of the date of the financial statements; accordingly, as this information changes, the financial statements may reflect different estimates, assumptions and judgments. Certain policies inherently have greater reliance on the use of estimates, assumptions and judgments and, as such, have a greater possibility of producing results that could be materially different than originally reported. Estimates, assumptions and judgments are necessary when assets and liabilities are required to be recorded at fair value, when a decline in the value of an asset not carried on the financial statements at fair value warrants an impairment write-down or valuation allowance to be established, or when an asset or liability must be recorded contingent upon a future event. Carrying assets and liabilities at fair value inherently results in more financial statement volatility. The fair values and the information used to record valuation adjustments for certain assets and liabilities are based either on quoted market prices or are provided by other third-party sources, when readily available. Management evaluates its estimates and assumptions on an ongoing basis using historical experience and other factors, including the current economic environment, which management believes to be reasonable under the circumstances. The Company adjusts such estimates and assumptions when the Company believes facts and circumstances dictate. Illiquid credit markets, volatile equity, foreign currency and energy markets and declines in consumer spending have combined to increase the uncertainty inherent in such estimates and assumptions. As future events and their effects cannot be determined with precision, actual results could differ significantly from these estimates. Changes in those estimates resulting from continuing changes in the economic environment will be reflected in the financial statements in the future periods.

The Company s accounting policies are fundamental to understanding management s discussion and analysis of financial condition and results of operations. The most significant accounting policies followed by the Company are presented in Note 1 beginning on page 64. The accounting for factoring transactions also is discussed under BUSINESS OPERATIONS The Bank Commercial Lending, Asset-Based Financing and Factoring/Accounts Receivable Management on pages 1 and 2.

The Company has identified its policies on the valuation of securities, the allowance for loan losses and income tax liabilities to be critical because management has to make subjective and/or complex judgments about matters that are inherently uncertain and could be subject to revision as new information becomes available. Additional information on these policies can be found in Note 1 to the consolidated financial statements.

Management utilizes various inputs to determine the fair value of its securities portfolio. Fair value of securities is based upon market prices, where available (Level 1 inputs). If such quoted market prices are not available, fair value is based upon market prices determined by an outside, independent entity that primarily uses, as inputs, observable market-based parameters (Level 2 inputs). Valuation adjustments may be made to ensure that financial instruments are recorded at fair value. These adjustments may include amounts to reflect counterparty credit quality and the Company s creditworthiness, among other things, as well as unobservable parameters (Level 3 inputs). Any such valuation adjustments are applied consistently over time. The Company s valuation methodologies may produce a fair value calculation that may not be indicative of net realized value or reflective of future fair values. While management believes the Company s valuation methodologies are appropriate and consistent with other market participants, the use of different methodologies or assumptions to determine the fair value of certain financial instruments could result in a different estimate of fair value at the reporting date. Additional discussion of valuation methodologies is presented in Note 23 of the Company s consolidated financial statements.

A periodic review is conducted by management to determine if the decline in the fair value of any security appears to be other-than-temporary. Factors considered in determining whether the decline is other-than-temporary include, but are not limited to: the length of time and the extent to which fair value has been below cost; the financial condition and near- term prospects of the issuer; and the Company s ability and intent to hold the investment for a period of time sufficient to allow for any anticipated recovery of cost. If the decline is deemed to be other-than-temporary, and the Company has the ability and intent to hold the security until there is a recovery of cost, the security is written down to new cost basis and the resulting credit component of the loss is reported in noninterest income and the remainder of the loss is recorded in shareholders equity. If the Company does not have the ability and intent to hold the security until there is a recovery of cost, the full amount of the other-than-temporary impairment is recorded in noninterest income. Additional discussion of management s evaluation process and other-than-temporary-impairment charges is presented in Note 1 and in Note 5.

The allowance for loan losses represents management s estimate of probable credit losses inherent in the loan portfolio. Determining the amount of the allowance for loan losses is considered a critical accounting estimate because it requires significant judgment and the use of estimates related to the amount and timing of expected future cash flows on impaired loans, estimated losses on pools of homogeneous loans based on historical loss experience, and consideration of current economic trends and conditions, all of which may be susceptible to significant change. The methodology used to determine the allowance for loan losses is outlined in Note 1 to the consolidated financial statements and a discussion of the factors driving changes in the amount of the allowance for loan losses is included under the caption. Asset Quality beginning on page 44.

The objectives of accounting for income taxes are to recognize the amount of taxes payable or refundable for the current year and deferred tax liabilities and assets for the future tax consequences of events that have been recognized in an entity s financial statements or tax returns. Judgment is required in assessing the future tax consequences of events that have been recognized in the Company s consolidated financial statements or tax returns. Fluctuations in the actual outcome of these future tax consequences could impact the Company s consolidated financial condition or results of operations. In connection with determining its income tax provision under Financial Accounting Standards Board (FASB) Accounting Standards Codification (Codification) Topic 740: *Income Taxes*, the Company evaluates each of its tax positions and strategies periodically to determine whether the reserve continues to be appropriate. Additional discussion on the accounting for income taxes is presented in Note 1 and in Note 21 of the Company s consolidated financial statements.

#### **OVERVIEW**

The Company provides a broad range of financial products and services, including business and consumer loans, commercial and residential mortgage lending and brokerage, asset-based financing, factoring/accounts receivable management services, trade financing, equipment financing, and deposit services. The Company has operations in the New York metropolitan area and conducts business throughout the United States. The general state of the U.S. economy and, in particular, economic and market conditions in the New York metropolitan area have a significant impact on loan demand, the ability of borrowers to repay these loans and the value of any collateral securing these loans and may also affect deposit levels. Accordingly, future general economic conditions are a key uncertainty that management expects will materially affect the Company s results of operations.

On April 3, 2009, Sterling Factors Corporation, a subsidiary of the bank, acquired substantially all of the assets and customer lists of DCD Capital, LLC and DCD Trade Services, LLC. The acquired assets and customer lists are now operating as a division under the name Sterling Trade Capital.

In 2010, the bank s average earning assets represented approximately 98.3% of the Company s average earning assets. Loans represented 61.2% and investment securities represented 36.8% of the bank s average earning assets in 2010.

The Company s primary source of earnings is net interest income, and its principal market risk exposure is interest rate risk. The Company is not able to predict market interest rate fluctuations and its asset/liability management strategy may not prevent interest rate changes from having a material adverse effect on the Company s results of operations and financial condition.

Although management endeavors to minimize the credit risk inherent in the Company s loan portfolio, it must necessarily make various assumptions and judgments about the collectibility of the loan portfolio based on its experience and evaluation of economic conditions. If such assumptions or judgments prove to be incorrect, the current allowance for loan losses may not be sufficient to cover loan losses and additions to the allowance may be necessary, which would have a negative impact on net income.

There is intense competition in all areas in which the Company conducts its business. The Company competes with banks and other financial institutions, including savings and loan associations, savings banks, finance companies, and credit unions. Many of these competitors have substantially greater resources and lending limits and provide a wider array of banking services. To a limited extent, the Company also competes with other providers of financial services, such as money market mutual funds, brokerage firms, consumer finance companies and insurance companies. Competition is based on a number of factors, including prices, interest rates, services, availability of products and geographic location.

The Company regularly evaluates acquisition opportunities and conducts due diligence activities in connection with possible acquisitions. As a result, acquisition discussions, and in some cases negotiations, regularly take place and future acquisitions could occur.

Taxable-equivalent adjustments are the result of increasing income from tax-free loans and investments by an amount equal to the taxes that would be paid if the income were fully taxable-based on a 35% federal tax rate, thus making tax-exempt yields comparable to taxable asset yields.

#### INCOME STATEMENT ANALYSIS

Net interest income, which represents the difference between interest earned on interest-earning assets and interest incurred on interest-bearing liabilities, is the Company's primary source of earnings. Net interest income can be affected by changes in market interest rates as well as the level and composition of assets, liabilities and shareholders' equity. Net interest spread is the difference between the average rate earned, on a tax-equivalent basis, on interest-earning assets and the average rate paid on interest-bearing liabilities. The net yield on interest-earning assets (net interest margin) is calculated by dividing tax equivalent net interest income by average interest-earning assets. Generally, the net interest margin will exceed the net interest spread because a portion of interest-earning assets are funded by various noninterest-bearing sources, principally noninterest-bearing deposits and shareholders' equity. The increases (decreases) in the components of interest income and interest expense, expressed in terms of fluctuation in average volume and rate, are provided in the RATE/VOLUME ANALYSIS shown on page 51. Information as to the components of interest income and interest expense and average rates is provided in the AVERAGE BALANCE SHEETS shown on page 50.

#### **COMPARISON OF THE YEARS 2010 AND 2009**

The Company reported net income available to common shareholders for 2010 of \$4.4 million, representing \$0.18 per share calculated on a diluted basis, compared to \$6.6 million, or \$0.37 per share calculated on a diluted basis, for 2009. The \$2.2 million decrease in net income available to common shareholders was primarily due to a \$8.7 million decrease in interest income, a \$3.0 million increase in noninterest expenses and a \$0.6 million increase in the provision for loan losses, which more than offset a \$3.5 million increase in non-interest income, a \$3.7 million decrease in interest expense, a \$2.8 lower provision for income taxes and a reduction of \$0.2 million decrease in dividends and accretion related to the preferred shares issued to the U.S. Treasury under the TARP Capital Purchase Program.

#### Net Interest Income

Net interest income, on a tax-equivalent basis, was \$84.2 million for 2010 compared to \$87.6 million for 2009. Net interest income benefitted from higher average loan and investment securities balances, lower borrowings and lower cost of funding. Partially offsetting those benefits was the impact of lower yields on loans and investment securities, coupled with higher interest-bearing deposit balances. The net interest margin, on a tax-equivalent basis, was 4.25% for 2010 compared to 4.63% for 2009. The net interest margin was impacted by the lower interest rate environment in 2010, the higher level of noninterest-bearing demand deposits and the effect of higher average loans and investment securities outstanding.

Total interest income, on a tax-equivalent basis, aggregated \$99.8 million for 2010, down \$7.2 million from 2009. The tax-equivalent yield on interest-earning assets was 5.04% for 2010 compared to 5.65% for 2009.

Interest earned on the loan portfolio decreased to \$70.1 million for 2010 from \$71.8 million for the prior year period.

Average loan balances amounted to \$1,262.4 million, an increase of \$67.1 million from an average of \$1,195.3 million in the prior year period. The increase in average loans, primarily due to the Company s business development activities, accounted for a \$3.7 million increase in interest earned on loans. The yield on the loan portfolio decreased to 5.98% for 2010 from 6.38% for 2009 period, which was primarily attributed to the mix of average outstanding balances among the components of the loan portfolio.

Interest earned on the securities portfolio, on a tax-equivalent basis, decreased to \$29.2 million for 2010 from \$34.6 million in 2009. Average outstandings increased to \$768.2 million (37.1% of average earning assets) for 2010 from \$719.5 million (36.7% of average earning assets) in 2009. The average yield on investment securities decreased to 3.80% for 2010 from 4.80% in 2009. The decrease in both balances and yield reflect the impact of the Company s asset/ liability management strategy designed to shorten the average life of the portfolio to position the Company for rising interest rates in future periods while taking advantage of the current uptick in long term rates. The short-term part of the strategy was implemented through the sale of available for sale securities, principally mortgage-backed securities, with longer term average lives offset by the purchase of short-term corporate debt and obligations of U.S. government corporations and government sponsored enterprises. The long-term part of the strategy was implemented through the purchase of obligations of state and political subdivisions with maturities of approximately 10 years.

Total interest expense decreased by \$3.7 million for 2010 from \$19.3 million for 2009 period, primarily due to the impact of lower rates paid, coupled with lower balances for borrowings, partially offset by the impact of higher interest-bearing deposit balances.

Interest expense on deposits decreased to \$9.6 million for 2010 from \$11.9 million for the 2009 period, primarily due to a decrease in the cost of those funds. The average rate paid on interest-bearing deposits was 0.85%, which was 42 basis points lower than the prior year period. The decrease in average cost of interest-bearing deposits reflects the impact of deposit pricing strategies and the Company s purchase of certificates of deposit from CDARS which provided deposit balances at lower rates than paid for traditional certificate of deposit products. Average interest-bearing deposits were \$1,123.3 million for 2010 compared to \$938.5 million for 2009, reflecting an increase in certificates of deposit, largely to the CDARS program which is a lower cost product than traditional certificates of deposit.

Interest expense on borrowings decreased to \$6.0 million for 2010 from \$7.4 million for 2009 primarily due to lower balances partially offset by the impact of changes in mix. Average borrowings decreased to \$270.6 million for 2010 from \$446.1 million in the prior year period, reflecting a lesser reliance by the Company on wholesale borrowed funds. The change in mix resulted in an increase in the blended cost of borrowing to 2.22% from 1.66%.

#### **Provision for Loan Losses**

In light of recent economic developments and continued economic uncertainty, during the third quarter the Company decided, after consultation with external professionals and regulators, to implement an accelerated resolution of certain categories of nonaccrual loans. As a result, net charge-offs during 2010 of loans to small business borrowers (primarily in the lease financing portfolio) increased \$6.3 million when compared to the comparable 2009 period. Based on management s continuing evaluation of the loan portfolio (discussed under Asset Quality on page 44), the provision for loan losses for 2010 was \$28.5 million, compared to \$27.9 million for the prior year period.

The level of the allowance reflects changes in the size of the portfolio or in any of its components as well as management s continuing evaluation of industry concentrations, specific credit risks, loan loss experience, current loan portfolio quality, present economic, and political and regulatory conditions. Portions of the allowance may be allocated for specific credits; however, the entire allowance is available for any credit that, in management s judgment, should be charged off. While management utilizes its best judgment and information available, the ultimate adequacy of the allowance is dependent upon a variety of factors beyond the Company s control, including the performance of the Company s loan portfolio, the economy, changes in interest rates and the view of the regulatory authorities toward loan classifications.

During 2010, the allowance for loan losses decreased primarily due to a reduction in the allowance allocated to lease financing receivables, partially offset by increases in the allowance allocated to commercial and industrial loans, factored receivables, real estate residential mortgage, and real estate commercial mortgage and real estate construction and land development. The allowance allocated to lease financing receivables decreased primarily as a result of the lower level of lease financing receivables nonaccrual balances. The increase of the allowance allocated to commercial and industrial loans was primarily the result of the unsteady economic recovery resulting in higher charge-offs in 2010 compared to

2009 partially offset by lower nonaccrual levels at December 31, 2010 compared to December 31, 2009. The allowance allocated to factored receivables increased based on the continued weakening in the consumer sectors resulting in higher charge-off in 2010 compared to 2009. The increase in the allowance allocated to real estate residential mortgage loans was primarily due to the persistent decline in residential real estate values coupled with an increase in the specific valuation allowance for impaired residential mortgage loans. As a result of the disruption in the commercial real estate markets, resulting in an increase in nonaccrual levels and higher specific reserves for classified loans At December 31, 2010 when compared to December 31, 2009, the allowance allocated to real estate commercial mortgage and to real estate construction and land development was increased.

#### Noninterest Income

Noninterest income increased to \$47.6 million for 2010 from \$44.2 million in 2009. The increase principally resulted from higher income related to accounts receivable management and factoring services offset partly by lower mortgage banking income and securities gains. Commissions and other fees earned from accounts receivable management and factoring services were higher primarily due to the impact of increased volumes at our factoring unit and billings by clients providing temporary staffing also contributed to the improved level of fee income. Mortgage banking declined due to a lower volume of loans closed and a change in the mix of products being sold. Securities gains declined and reflected a modification of the asset liability management program commenced in 2009 that was designed to reduce the average life of the investment securities portfolio which was replaced by the strategy that was described under Net Interest Income on page 36. The Company sold approximately \$165.8 million of securities with a weighted average life of approximately 2.4 years. The Company expects to reinvest a significant portion of the proceeds in securities with an average life of less than two years.

#### Noninterest Expenses

Noninterest expenses were \$91.6 million for 2010, compared to \$88.5 million in 2009, primarily reflecting higher compensation and occupancy expenses related to the growth of the business and increased business development activities.

#### **Provision for Income Taxes**

The provision for income taxes for 2010 decreased to \$2.2 million from \$4.9 million for 2009. The decrease was primarily due to lower taxable income and a lower effective income tax rate in the 2010 period (23.5%) compared to the 2009 period (34.2%). The decrease in the effective tax rate was primarily related to the higher proportion of tax-exempt income achieved in 2010 compared to 2009 coupled with a lower level of pre-tax income.

#### **COMPARISON OF THE YEARS 2009 AND 2008**

The Company reported net income available to common shareholders for 2009 of \$6.6 million, representing \$0.37 per share calculated on a diluted basis, compared to \$15.9 million, or \$0.88 per share calculated on a diluted basis, for 2008. The \$9.3 million decrease in net income available to common shareholders was primarily due to a \$19.6 million increase in the provision for loan losses, a \$4.1 million increase in noninterest expenses and a \$2.7 million increase in dividends and accretion related to the preferred shares issued to the U.S. Treasury under the TARP Capital Purchase Program, which more than offset a \$10.9 million increase in noninterest income, a \$1.9 million increase in net interest income and a \$4.3 million lower provision for income taxes.

#### Net Interest Income

Net interest income, on a tax-equivalent basis, was \$87.6 million for 2009 compared to \$85.1 million for 2008. Net interest income benefitted from higher average loan balances, lower interest-bearing deposit balances and lower cost of funding. Partially offsetting those benefits was the impact of lower yield on loans and investment securities, lower investment securities balances and higher borrowed funds balances. The net interest margin, on a tax-equivalent basis, was 4.63% for 2009 compared to 4.60% for 2008. The net interest margin was impacted by the lower interest rate environment in 2009, the higher level of noninterest-bearing demand deposits and the effect of higher average loans outstanding.

Total interest income, on a tax-equivalent basis, aggregated \$106.9 million for 2009, down \$11.6 million from 2008. The tax-equivalent yield on interest-earning assets was 5.65% for 2009 compared to 6.40% for 2008.

Interest earned on the loan portfolio decreased to \$71.8 million for 2009 from \$80.4 million for the prior year period. Average loan balances amounted to \$1,195.3 million, an increase of \$51.7 million from an average of \$1,143.6 million in the prior year period. The increase in average loans, primarily due to the Company s business development activities, accounted for a \$3.3 million increase in interest earned on loans. The yield on the loan portfolio decreased to 6.38% for 2009 from 7.37% for 2008 period, which was primarily attributable to the lower interest rate environment in 2009 and the mix of average outstanding balances among the components of the loan portfolio.

Interest earned on the securities portfolio, on a tax-equivalent basis, decreased to \$34.6 million for 2009 from \$37.4 million in 2008. Average outstandings decreased to \$719.5 million (36.7% of average earning assets) for 2009 from \$744.2 million (39.0% of average earning assets) in 2008. The average yield on investment securities decreased to 4.80% for 2009 from 5.03% in 2008. The decrease in both balances and yield reflect the impact of the Company s asset/liability management strategy designed to shorten the average life of the portfolio coupled with calls of higher yielding securities. Under this strategy, the Company sold principally available for sale mortgage-backed securities with longer term average lives and replaced them with short-term corporate debt and U.S. Government Agency securities.

Offsetting the impact of the above, the average life was lengthened as a result of the impact of purchases of longer term municipal securities and the impact on our portfolio of callable U.S. Government Agency securities. Due to upward movement of interest rates at December 31, 2009, the prices on our portfolio of U.S. Government Agency securities declined below par value, making it less likely that these issues would be called. As a result, the average life of the securities portfolio was lengthened to approximately 5.4 years at December 31, 2009 compared to approximately 4.8 years at December 31, 2008.

Total interest expense decreased by \$14.1 million for 2009 from \$33.4 million for 2008 period, primarily due to the impact of lower rates paid, coupled with lower balances for interest-bearing deposits and borrowings.

Interest expense on deposits decreased to \$11.9 million for 2009 from \$21.5 million for the 2008 period, primarily due to a decrease in the cost of those funds. The average rate paid on interest-bearing deposits was 1.27%, which was 94 basis points lower than the prior year period. The decrease in average cost of deposits reflects the lower interest rate environment during 2009. Average interest-bearing deposits were \$938.5 million for 2009 compared to \$973.8 million for 2008, reflecting the Company s strategy to reduce reliance on higher-priced certificates of deposit.

Interest expense on borrowings decreased to \$7.4 million for 2009 from \$11.9 million for 2008 period, primarily due to lower rates paid for borrowed funds coupled with the benefit (reflected in the volume change) derived from the elimination of funding through dealer repurchase agreements partially offset by increased short-term borrowings from the Federal Reserve Bank. The average rate paid for borrowed funds was 1.66%, which was 102 basis points lower than the prior year period. The decrease in the average cost of borrowings reflects the lower interest rate environment in 2009. Average borrowings increased to \$446.1 million for 2009 from \$443.3 million in the prior year period, reflecting greater reliance by the Company on wholesale funding.

#### **Provision for Loan Losses**

Based on management s continuing evaluation of the loan portfolio (discussed under Asset Quality beginning on page 44), the provision for loan losses for 2009 was \$27.9 million, compared to \$8.3 million for 2008. Factors affecting the larger provision for 2009 included further deterioration of economic conditions during that period, a \$16.9 million increase in net charge-offs, a \$10.6 million increase in nonaccrual loans and growth in the loan portfolio.

The level of the allowance reflects changes in the size of the portfolio or in any of its components as well as management s continuing evaluation of industry concentrations, specific credit risks, loan loss experience, current loan portfolio quality, present economic, and political and regulatory conditions. Portions of the allowance may be allocated for specific credits; however, the entire allowance is available for any credit that, in management s judgment, should be charged off. While management utilizes its best judgment and information available, the ultimate adequacy of the allowance is dependent upon a variety of factors beyond the Company s control, including the performance of the Company s loan portfolio, the economy, changes in interest rates and the view of the regulatory authorities toward loan classifications.

During 2009, the allowance for loan losses increased because of increases in the allowance allocated to lease financing receivables and in the allowance allocated to commercial and

industrial loans partially offset by a reduction in the allowance allocated to real estate-residential mortgage loans. The allowance allocated to lease financing receivables increased primarily as a result of increased losses experienced in that category in 2009 compared to 2008 partially offset by a decrease in the specific valuation allowance for impaired loans. The impact of the increase in nonaccrual lease financing receivables at December 31, 2009 compared to December 31, 2008 was mitigated by decreasing levels of nonaccruals in that category in the third and fourth quarters of 2009 compared to the second quarter of 2009. The allowance allocated to commercial and industrial loans increased due to increased losses experienced in that category in 2009 compared to 2008 and higher nonaccrual levels in that category at December 31, 2009 compared to December 31, 2008 and higher nonaccrual levels in that category at December 31, 2009 compared to real estate-residential mortgage loans. The allowance allocated to real estate-residential mortgage loans decreased primarily due to lower nonaccrual loan balances at December 31, 2009 compared to December 31, 2008 coupled with a decrease in the specific valuation allowance for impaired loans. The allowance for loan losses benefitted from a recovery of \$0.9 million on a loan charged off in a prior period.

#### Noninterest Income

Noninterest income increased to \$44.2 million for 2009 from \$33.3 million in the 2008 period. The increase principally resulted from securities gains recognized in the 2009 period compared to securities losses recognized in the 2008 period. Also contributing to the increase were higher income related to accounts receivable management and factoring services, higher mortgage banking income, and higher service charges on deposit accounts. In connection with an asset/liability management program designed to reduce the average life of the investment securities portfolio, the Company sold approximately \$227.6 million of securities with a weighted average life of approximately 3.3 years. The Company reinvested a significant portion of the proceeds in securities with an average life of less than two years. The 2008 amount was reduced by other-than-temporary impairment (OTTI) charges which resulted from management s regular review of the investment portfolio. One charge, taken in the second quarter of 2008 for a single-issuer, investment grade trust preferred security, amounted to approximately \$0.5 million and reduced the carrying amount of the security to \$2.6 million. Commissions and other fees earned from accounts receivable management and factoring services were higher primarily due to the impact of the acquisition of the business of DCD Capital, LLC and DCD Trade Services, LLC on April 6, 2009. Partially offsetting that benefit was the impact of reduced volume of billing by clients providing temporary staffing. The increase in mortgage banking income was due to higher volume of loans sold.

#### Noninterest Expenses

Noninterest expenses for 2009 increased \$4.0 million when compared to 2008. The increase was primarily due to the impact of the acquisition of the business of DCD Capital, LLC and DCD Trade Services, LLC on April 6, 2009 and higher deposit insurance and pension costs. Partially offsetting these increases was a reduction in expenses for professional services.

The increase in deposit insurance cost was due to a special assessment levied in the 2009 second quarter by the FDIC on all insured depository institutions totaling 5 basis points of each institution s total assets less Tier 1 capital as of June 30, 2009, not to exceed 10 basis points of domestic deposits. The special assessment is part of the FDIC s effort to rebuild the Deposit Insurance Fund (DIF). In conjunction with the amended plan, the FDIC implemented a final rule on November 17, 2009 requiring insured institutions to prepay their estimated quarterly risk-based assessments for the fourth quarter of 2009 and for all of 2010, 2011 and 2012. The bank s prepaid amount to the FDIC was \$8.3 million.

The increase in pension expense was primarily the result of weaker return on plan assets during 2008. The Company s defined benefit retirement plan was closed to new members effective as of January 3, 2007. There have been no new participants in the Company s Supplemental Executive Retirement Plan (SERP). The defined benefit plan was replaced by an enhanced 401(k) contribution for new employees. The Company still has funding obligations related to the defined benefit retirement plan and SERP and will recognize retirement expense related to these plans in future years, which will be dependent on the return earned on plan assets, the level of interest rates, salary increases, employee turnover and other factors.

#### **Provision for Income Taxes**

The provision for income taxes for 2009 decreased to \$4.9 million, reflecting an effective tax rate of 34.2%, compared with \$9.2 million for 2008, reflecting an effective tax rate of 36.4%. The decrease was primarily due to an increase in the proportion of tax-exempt income in the 2009 period.

#### **BALANCE SHEET ANALYSIS**

#### Securities

At December 31, 2010, the Company s portfolio of securities totaled \$789.3 million, of which obligations of U.S. government corporations and government sponsored enterprises amounted to \$434.4 million which is approximately 55.0% of the total. The Company has the intent and ability to hold to maturity securities classified as held to maturity, at which time it will receive full value for these securities. These securities are carried at cost, adjusted for amortization of premiums and accretion of discounts. The gross unrealized gains and losses on held to maturity securities were \$7.9 million and \$6.7 million, respectively. Securities classified as available for sale may be sold in the future, prior to maturity. These securities are carried at fair value. Net aggregate unrealized gains or losses on these securities are included, net of taxes, as a component of shareholders equity. Given the generally high credit quality of the portfolio, management expects to realize all of its investment upon market recovery or, the maturity of such instruments and thus believes that any impairment in value is interest rate related and therefore temporary. Available for sale securities included gross unrealized gains of \$1.6 million and gross unrealized losses of \$1.7 million. As of December 31, 2010, management does not have the intent to sell any of the securities classified as available for sale in the table on page 42 and management believes that it is more likely than not that the Company will not have to sell any such securities before a recovery of cost. During 2008, the Company recognized OTTI charges totaling \$1.7 million which are included in noninterest income under the caption Other-than-temporary losses. These securities were subsequently sold at a minimal gain.

The following table sets forth the composition of the Company s investment securities by type, with related carrying values at the end of each of the three most recent fiscal years:

#### Loan Portfolio

A management objective is to maintain the quality of the loan portfolio. The Company seeks to achieve this objective by maintaining rigorous underwriting standards coupled with regular evaluation of the creditworthiness of and the designation of lending limits for each borrower. The portfolio strategies include seeking industry and loan size diversification in order to minimize credit exposure and originating loans in markets with which the Company is familiar.

The Company s commercial and industrial loan and factored receivables portfolios represents approximately 58% of all loans. Loans in this category are typically made to individuals, small and medium-sized businesses in amounts generally up to \$20 million. The Company s equipment financing portfolio, which consists of finance leases for various types of business equipment, represents approximately 11% of all loans. The leasing and commercial and industrial loan portfolios are included in corporate lending for segment reporting purposes as presented in Note 25 beginning on page 108. The Company s real estate loan portfolios, which represent approximately 21% of all loans, are secured by mortgages on real property located principally in the states of New York, New Jersey, Connecticut, Virginia and North Carolina. Sources of repayment are from the borrower s operating profits, cash flows and liquidation of pledged collateral. Based on underwriting standards, loans and leases may be secured whole or in part by collateral such as liquid assets, accounts receivable, equipment, inventory, and real property. The collateral securing any loan or lease may depend on the type of loan and may vary in value based on market conditions.

The following table, restated to reflect the disposition of Sterling Financial (see BUSINESS beginning on page 1), sets forth the composition of the Company s loans held for sale and loans held in portfolio, net of unearned discounts, at the end of each of the five most recent fiscal years:

December 31,	2010		2009 2008				2007	2006

Loans to nondepository										
institutions	112,882	8.38	35,591	2.90	N/A		N/A		N/A	
Total	\$ 1,346,283	100.00%	\$ 1,229,304	100.00%	\$ 1,207,988	100.00%	\$ 1,176,552	100.00%	\$ 1,105,377	100.00%

The following table sets forth the maturities of the Company s commercial and industrial, factored receivables and construction and land development loans, as of December 31, 2010:

	Due One Year or Less	Due One to Five Years	Due After Five Years	Total Gross Loans
Commercial and industrial	\$ 512,432	\$ 70,398	\$ 37,306	\$ 620,136
Factored receivables	162,070			162,070
Real estate construction and land development	12,889	9,150	3,585	25,624

All commercial and industrial loans due after one year have predetermined interest rates.

All real estate construction and land development loans due after one year have floating or adjustable interest rates.

#### Asset Quality

Intrinsic to the lending process is the possibility of loss. In times of economic slowdown, the risk of loss inherent in the Company s portfolio of loans may increase. While management endeavors to minimize this risk, it recognizes that loan losses will occur and that the amount of these losses will fluctuate depending on the risk characteristics of the loan portfolio which in turn depend on current and future economic conditions, the financial condition of borrowers, the realization of collateral, and the credit management process.

Nonaccrual loans at December 31, 2010 decreased \$11.3 million compared to December 31, 2009. This primarily reflected decreases of \$3.2 million and \$11.1 million in commercial and industrial loans and lease financing receivables, respectively, partially offset by an increase of \$3.1 million in commercial real estate mortgage loans. Net loan charge-offs in 2010 were \$6.3 million higher than those in 2009 (primarily reflecting increases in net charge-offs of \$2.8 million for lease financing receivables and \$3.0 million for commercial and industrial loans). A worsening of existing economic conditions will likely result in levels of charge-offs and nonaccrual loans that will be higher than those in the historical levels.

The following table, restated to reflect the disposition of Sterling Financial (see BUSINESS beginning on page 1), sets forth the amount of domestic nonaccrual and past due loans of the Company at the end of each of the five most recent fiscal years; there were no foreign loans accounted for on a nonaccrual basis. At December 31, 2010, approximately \$6.1 million of equipment financing receivables and residential real estate loans were troubled debt restructurings. See Note 6 beginning on page 77 for additional discussion. Loans contractually past due 90 days or more as to principal or interest and still accruing are loans that are both well-secured or guaranteed by financially responsible third parties and are in the process of collection.

Nonaccrual and past due loans as a percentage of total										
gross loans		0.79%	1	1.53%		0.66%		0.62%	1	0.58%

At December 31, 2010, commercial and industrial nonaccruals represented 0.16% of commercial and industrial loans. There were 6 loans made to small business borrowers located in 3 states with balances ranging between approximately \$33.2 thousand and \$497.6 thousand.

At December 31, 2010, equipment financing nonaccruals represented 0.62% of lease financing receivables. The lessees of the equipment are located in 11 states. There were 16 leases ranging between approximately \$345 and \$268.9 thousand. The value of the underlying collateral related to lease financing nonaccruals varies depending on the type and condition of equipment. While most leases are written on a recourse basis, with personal guarantees of the principals, the current value of the collateral is often less than the lease financing balance. Collection efforts include repossession and/or sale of leased equipment, payment discussions with the lessee, the principal and/or guarantors, and obtaining judgments against the lessee, the principal and/or guarantors. The balance is charged off at the earlier of when the lease is past due 120 days or when it is determined that collection efforts are no longer productive. Factors considered in determining whether collection efforts are no longer productive include any amounts currently being collected, the status of discussions or negotiations with the lessee, the principal and/or guarantors, the cost of continuing efforts to collect, the status of any foreclosure or other legal actions, the value of the collateral, and any other pertinent factors.

At December 31, 2010, residential real estate nonaccruals represented 1.26% of residential real estate loans held in portfolio. There were 12 loans ranging between approximately \$10.2 thousand and \$413.2 thousand secured by properties located in 6 states.

At December 31, 2010, commercial real estate nonaccruals represented 3.22% of commercial real estate loans. There was one loan for \$745.3 thousand and another for \$2.4 million secured by property located in 1 state.

At December 31, 2010, other real estate owned consisted of one property valued at \$31.7 thousand and another valued at \$150.0 thousand located in 2 states.

The allowance for loan losses is a reserve established through a provision for loan losses charged to expense, which represents management s best estimate of probable losses that have incurred within the existing portfolio of loans. The allowance, in the judgment of management, is necessary to reserve for estimated loan losses and risks inherent in the loan portfolio. The Company s allowance for loan losses methodology includes allowance allocations calculated in accordance with FASB Codification Topic 310, *Receivables* and allowance allocations calculated in accordance with FASB Codification Topic 450, *Contingencies*. Accordingly, the methodology is based on historical loss experience by type of credit and internal risk grade, specific homogenous pools and specific loss allocations, with adjustments for current events and conditions. The Company s process for the appropriate level of the allowance for loan losses is designed to account for credit deterioration as it occurs. The provision for loan losses reflects loan quality trends, including the levels of and trends related to non-accrual loans, past due loans, potential problem loans, classified and criticized loans and net charge-offs or recoveries, among other factors. The provision for loan losses also reflects the totality of actions taken on all loans for a particular period. In other words, the amount of the provision reflects not only the necessary increases in the allowance for loan losses related to newly identified criticized loans, but it also reflects actions taken related to other loans including, among other things, any necessary increases or decreases in required allowances for specific loans or loan pools. See Note 6 Loans and Allowance for Loan Losses in the appropriate level of the allowance for loan losses.

At December 31, 2010, the ratio of the allowance to loans held in portfolio, net of unearned discounts, was 1.39% and the allowance was \$18.2 million. Loans 90 days past due and still accruing amounted to \$314 thousand. At such date, the Company s nonaccrual loans amounted to \$6.6 million; \$4.5 million of such loans were judged to be impaired within the scope of FASB Codification Topic 310: *Receivables*, and had a valuation allowance totaling \$1.4 million, which is included within the overall allowance for loan losses. Based on the foregoing, as well as management s judgment as to the current risks inherent in loans held in portfolio, the Company s allowance for loan losses was deemed adequate to absorb all probable losses on specifically known and other credit risks associated with the portfolio as of December 31, 2010. Net losses within loans held in portfolio are not statistically predictable and changes in conditions in the next twelve months could result in future provisions for loan losses varying from the provision taken in 2010. Potential problem loans, which are loans that are currently performing under present loan repayment terms but where known information about possible credit problems of borrowers causes management to have serious doubts as to the ability of the borrowers to continue to comply with the present repayment terms, aggregated \$-0- and \$2.4 million at December 31, 2010 and 2009, respectively.

The following table, restated to reflect the disposition of Sterling Financial (see BUSINESS beginning on page 1), sets forth certain information with respect to the Company s loan loss experience for each of the five most recent fiscal years:

Years Ended December 31,		2010		2009	2008	2007	2006

The following table, restated to reflect the disposition of Sterling Financial (see BUSINESS beginning on page 1), presents the Company s allocation of the allowance for loan losses. This allocation is based on estimates by management and may vary from year to year based on management s evaluation of the risk characteristics of the loan portfolio. The amount allocated to a particular loan category of the Company s loans held in portfolio may not necessarily be indicative of actual future charge-offs in that loan category.

December 31,	2010		2009		2008		2007		2006

Total	\$ 18,238	100.00%	\$ 19,872	100.00%	\$ 16,010	100.00%	\$ 15,085	100.00%	\$ 16,288	100.00%

During 2010, the allowance for loan losses decreased \$1.6 million from \$19.9 million at December 31, 2009 primarily due to a reduction in the allowance allocated to lease financing receivables (\$6.8 million) partially offset by increases in the allowance allocated to commercial and industrial loans (\$1.4 million), factored receivables (\$0.5 million), real estate residential mortgage (\$0.9 million), and real estate commercial mortgage (\$1.7 million) and real estate construction and land development (\$0.2 million). The allowance allocated to lease financing receivables decreased primarily as a result of the lower level of lease financing receivables nonaccrual balances. The increase of the allowance allocated to commercial mortgage was primarily the result of the unsteady economic recovery. The allowance to factored receivables increased based on the continued weakening in the consumer sectors. The increase in the allowance allocated to real estate residential mortgage was primarily due to the persistent decline in residential real estate values. As a result of the disruption in the commercial real estate markets, the allowance allocated to real estate commercial mortgage and to real estate construction and land development was increased.

During 2009, the allowance for loan losses increased because of increases in the allowance allocated to lease financing receivables and in the allowance allocated to commercial and industrial loans, partially offset by a reduction in the allowance allocated to real estate-residential mortgage loans. The allowance allocated to lease financing receivables increased primarily as a result of increased losses experienced in that category in 2009 compared to 2008 partially offset by a decrease in the specific valuation allowance for impaired loans. The impact of the increase in nonaccrual lease financing receivables at December 31, 2009 compared to December 31, 2008 was mitigated by decreasing levels of nonaccruals in that category in the third and fourth quarters of 2009 compared to the second quarter of 2009. The allowance allocated to real estate-residential levels in that category at December 31, 2009 compared to December 31, 2008 partially offset by a decrease in the specific valuation allowance in the specific valuation allowance allocated to 2008 and higher nonaccrual levels in that category at December 31, 2009 compared to December 31, 2008 partially offset by a decrease in the specific valuation allowance for impaired loans. The allowance allocated to real estate-residential mortgage loans decreased primarily due to lower nonaccrual loan balances at December 31, 2009 compared to a loan charged off in a prior period.

During 2008, the allowance for loan losses increased primarily because of increases in the allowance allocated to lease financing and in the allowance allocated to real estate residential mortgage loans. The allowance allocated to lease financing receivables increased primarily as a result of increased losses experienced in that category in 2008 compared to 2007 and an increase in the specific valuation

allowance for impaired loans. The allowance allocated to real estate residential mortgage loans increased primarily due to increased risks in the real estate market in 2008 compared to 2007 and an increase in the specific valuation allowance for impaired loans.

During 2007, the allowance for loan losses decreased primarily because of decreases in the allowance allocated to commercial and industrial loans and lease financing receivables more than offset an increase in the allowance allocated to real estate residential mortgage loans. During 2007 the allowance allocated to commercial and industrial loans decreased primarily as a result of another year of low loss experience in Sterling Resource Funding Corp. compared to its loss experience before the Company acquired it as of April 1, 2006. The allowance allocated to lease financing receivables decreased primarily as a result of improved loss experience in that category in 2007 compared to 2006. The allowance allocated to real estate residential mortgage loans increased primarily due to increased risks in the real estate market in 2007 compared to 2006 and an increase in the specific valuation allowance for impaired loans.

#### Deposits

A significant source of funds are customer deposits, consisting of demand (noninterest-bearing), NOW, savings, money market and time deposits (principally certificates of deposit).

The following table provides certain information with respect to the Company s deposits at the end of each of the three most recent fiscal years:

2010		2009		2008		
Balances	% of Total	Balances	% of Total	Balances	% of Total

The Company began participating in the Certificate of Deposit Account Registry Service (CDARS) on January 22, 2009. CDARS deposits totaled approximately \$180.7 million at December 31, 2010 and averaged approximately \$184.2 million for the year ended December 31, 2010. CDARS deposits totaled approximately \$82.3 million at December 31, 2009 and averaged approximately \$42.0 million for the year ended December 31, 2009.

Scheduled maturities of time deposits at December 31, 2010 were as follows:

2011 2012 and later	\$ 5	63,264 52,003
	\$ 6	15,267

Scheduled maturities of time deposits in amounts of \$100,000 or more at December 31, 2010 were as follows:

Due after 3 months and within 6 months	197,301
Due after 6 months and within 12 months	117,742
Due after 12 months	26,131
	\$ 488,433

Fluctuations of balances in total or among categories at any date can occur based on the Company s mix of assets and liabilities, as well as on customers balance sheet strategies. Historically, however, average balances for deposits have been relatively stable. Information regarding these average balances for the three most recent fiscal years is presented on page 50.

- [1] Amounts are presented on a tax-equivalent basis.
- [2] The change in interest income and interest expense due to a combination of both volume and rate have been allocated to the change due to volume and the change due to rate in proportion to the relationship of the change due solely to each. The change in interest income for Federal funds sold and in interest expense for securities sold under agreements to repurchase dealers and short-term borrowings FRB has been allocated entirely to the volume variance. The effect of the extra day in 2008 has also been allocated entirely to the volume variance.
- [3] Includes loans held for sale and loans held in portfolio; all loans are domestic. Nonaccrual loans have been included in the amounts outstanding and income has been included to the extent earned.

#### ASSET/LIABILITY MANAGEMENT

The Company s primary earnings source is its net interest income; therefore, the Company devotes significant time and has invested in resources to assist in the management of interest rate risk and asset quality. The Company s net interest income is affected by changes in market interest rates, and by the level and composition of interest-earning assets and interest-bearing liabilities. The Company s objectives in its asset/liability management are to utilize its capital effectively, to provide adequate liquidity and to enhance net interest income, without taking undue risks or subjecting the Company unduly to interest rate fluctuations.

The Company takes a coordinated approach to the management of its liquidity, capital and interest rate risk. This risk management process is governed by policies and limits established by senior management which are reviewed and approved by the Asset/Liability Committee. This committee, which is comprised of members of senior management, meets to review, among other things, economic conditions, interest rates, yield curve, cash flow projections, expected customer actions, liquidity levels, capital ratios and repricing characteristics of assets, liabilities and financial instruments.

#### Market Risk

Market risk is the risk of loss in a financial instrument arising from adverse changes in market indices such as interest rates, foreign exchange rates and equity prices. The Company s principal market risk exposure is interest rate risk, with no material impact on earnings from changes in foreign exchange rates or equity prices.

Interest rate risk is the exposure to changes in market interest rates. Interest rate sensitivity is the relationship between market interest rates and net interest income due to the repricing characteristics of assets and liabilities. The Company monitors the interest rate sensitivity of its balance sheet positions by examining its near-term sensitivity and its longer-term gap position. In its management of interest rate risk, the Company utilizes several financial and statistical tools including traditional gap analysis and sophisticated income simulation models.

A traditional gap analysis is prepared based on the maturity and repricing characteristics of interest-earning assets and interest-bearing liabilities for selected time bands. The mismatch between repricings or maturities within a time band is commonly referred to as the gap for that period. A positive gap (asset sensitive) where interest rate sensitive assets exceed interest rate sensitive liabilities generally will result in the net interest margin increasing in a rising rate environment and decreasing in a falling rate environment. A negative gap (liability sensitive) will generally have the opposite result on the net interest margin. However, the traditional gap analysis does not assess the relative sensitivity of assets and liabilities to changes in interest rates and other factors that could have an impact on interest rate sensitivity or net interest income. The Company utilizes the gap analysis to complement its income simulations modeling, primarily focusing on the longer-term structure of the balance sheet.

The Company s balance sheet structure is primarily short-term in nature with a substantial portion of assets and liabilities repricing or maturing within one year. The Company s gap analysis at December 31, 2010, presented on page 56, indicates that net interest income would increase during periods of rising interest rates and decrease during periods of falling interest rates, but, as mentioned above, gap analysis may not be an accurate predictor of net interest income.

As part of its interest rate risk strategy, the Company may use financial instrument derivatives to hedge the interest rate sensitivity of assets. The Company has written policy guidelines, approved by the Board of Directors, governing the use of financial instruments, including approved counterparties, risk limits and appropriate internal control procedures. The credit risk of derivatives arises principally from the potential for a counterparty to fail to meet its obligation to settle a contract on a timely basis.

As of December 31, 2010, the Company was not a party to any financial instrument derivative agreement. On September 14, 2008, an interest rate floor agreement with a notional amount of \$50 million expired. At December 31, 2008, there were no amounts receivable under this contract.

The interest rate floor agreement was not designated as a hedge for accounting purposes and therefore changes in the fair value of the instrument were required to be recognized as current income or expense in the Company s consolidated financial statements. For the years ended December 31, 2010, 2009 and 2008, \$-0-, \$-0- and \$88 thousand were credited to noninterest income, respectively.

The Company utilizes income simulation models to complement its traditional gap analysis. While the Asset/Liability Committee routinely monitors simulated net interest income sensitivity over a rolling two-year horizon, it also utilizes additional tools to monitor potential longer-term interest rate risk. The income simulation models measure the Company s net interest income volatility or sensitivity to interest rate changes utilizing statistical techniques that allow the Company to consider various factors which impact net interest income. These factors include actual maturities, estimated cash flows, repricing characteristics, deposits growth/retention and, most importantly, the relative sensitivity of the Company s assets

and liabilities to changes in market interest rates. This relative sensitivity is important to consider as the Company s core deposit base has not been subject to the same degree of interest rate sensitivity as its assets. The core deposit costs are internally managed and tend to exhibit less sensitivity to changes in interest rates than the Company s adjustable rate assets whose yields are based on external indices and generally change in concert with market interest rates.

The Company s interest rate sensitivity is determined by identifying the probable impact of changes in market interest rates on the yields on the Company s assets and the rates that would be paid on its liabilities. This modeling technique involves a degree of estimation based on certain assumptions that management believes to be reasonable. Utilizing this process, management projects the impact of changes in interest rates on net interest margin. The Company has established certain policy limits for the potential volatility of its net interest margin assuming certain levels of changes in market interest rates with the objective of maintaining a stable net interest margin under various probable rate scenarios. Management generally has maintained a risk position well within the policy limits. As of December 31, 2010, the model indicated the impact of a 100 and 200 basis point parallel and pro rata rise in rates over 12 months would approximate a 3.4% (\$3.7 million) and a 6.8% (\$7.2 million) increase in net interest income, respectively, while the impact of a 25 basis point decline in rates over the same period would approximate a 0.9% (\$1.0 million) decline from an unchanged rate environment. The likelihood of a decrease in interest rates beyond 25 basis points as of December 31, 2010 was considered to be remote given then-current interest rate levels. As of December 31, 2009, the model indicated the impact of a 100 and 200 basis point parallel and pro rata rise in rates over 12 months would approximate a 2.6% (\$2.7 million) and a 4.9% (\$5.1 million) increase in net interest income, respectively, while the impact of a 25 basis point decline in rates over the same period would approximate a 1.3% (\$1.3 million) decline from an unchanged rate environment. The likelihood of a decrease in interest rates beyond 25 basis point approximate a 1.3% (\$1.3 million) decline from an unchanged rate environment. The likelihood of a decrease in interest rates over the same period would approximate a 1.3% (\$1.3 million) decline f

The preceding sensitivity analysis does not represent a Company forecast and should not be relied upon as being indicative of expected operating results. These hypothetical estimates are based upon numerous assumptions including: the nature and timing of interest rate levels including yield curve shape, prepayments on loans and securities, deposit decay rates, pricing decisions on loans and deposits, reinvestment/ replacement of asset and liability cash flows, and others. While assumptions are developed based upon current economic and local market conditions, the Company cannot provide any assurances as to the predictive nature of these assumptions, including how customer preferences or competitor influences might change.

Also, as market conditions vary from those assumed in the sensitivity analysis, actual results will also differ due to: prepayment/refinancing levels likely deviating from those assumed, the varying impact of interest rate change caps or floors on adjustable rate assets, the potential effect of changing debt service levels on customers with adjustable rate loans, depositor early withdrawals and product preference changes, and other variables. Furthermore, the sensitivity analysis does not reflect actions that the Asset/Liability Committee might take in responding to or anticipating changes in interest rates.

The shape of the yield curve can cause downward pressure on net interest income. In general, if and to the extent that the yield curve is flatter (*i.e.*, the differences between interest rates for different maturities are relatively smaller) than previously anticipated, then the yield on the Company s interest-earning assets and its cash flows will tend to be lower. Management believes that a relatively flat yield curve could continue to affect adversely the Company s results in 2011.

### Liquidity Risk

Liquidity is the ability to meet cash needs arising from changes in various categories of assets and liabilities. Liquidity is constantly monitored and managed at both the parent company and the bank levels. Liquid assets consist of cash and due from banks, interest-bearing deposits in banks and Federal funds sold and securities available for sale. Primary funding sources include core deposits, capital markets funds and other money market sources. Core deposits include domestic noninterest-bearing and interest-bearing retail deposits, which historically have been relatively stable. The parent company and the bank believe that they have significant unused borrowing capacity. Contingency plans exist which we believe could be implemented on a timely basis to mitigate the impact of any dramatic change in market conditions.

The parent company depends for its cash requirements on funds maintained or generated by its subsidiaries, principally the bank. Such sources have been adequate to meet the parent company s cash requirements throughout its history.

Various legal restrictions limit the extent to which the bank can supply funds to the parent company and its non-bank subsidiaries. All national banks are limited in the payment of dividends without the approval of the Comptroller of the Currency to an amount not to exceed the net profits (as defined) for the year to date combined with its retained net profits for the preceding two calendar years.

In December 2008, under the U.S. Treasury s TARP Capital Purchase Program, we issued to the U.S. Treasury 42,000 of the parent company s Fixed Rate Cumulative Perpetual Preferred Shares, Series A, liquidation preference of \$1,000 per share (Series A Preferred Shares). Cumulative dividends on the Series A Preferred Shares are payable at 5% per annum for the first five years and at a rate of 9% per annum thereafter. In conjunction with its purchase of the Series A Preferred Shares, the U.S. Treasury also received a 10-year warrant to purchase up to 516,817 of the parent company s common shares, at an exercise price of \$12.19 per share, for an aggregate purchase price of \$6.3 million in cash if the warrant is exercised in full. The allocated carrying values of the warrant and the Series A Preferred Shares on the date of issuance (based on their relative fair values) were \$2.6 million and \$39.4 million, respectively. The Series A Preferred Shares will be accreted to the redemption price of \$42 million over five years. The warrant is exercisable at any time until December 23, 2018, and the number of common shares underlying the warrant and the exercise price are subject to adjustment for certain dilutive events. If, on or before December 31, 2010, we had received aggregate gross cash proceeds of at least \$42 million from sales of Tier 1 qualifying perpetual preferred shares or common shares, the number of common shares issuable upon exercise of the warrant would have been reduced by one-half of the original number of common shares so issuable.

At December 31, 2010, the parent company s short-term debt, consisting principally of commercial paper used to finance ongoing current business activities, was approximately \$15.4 million. The parent company had cash, interest-bearing deposits with banks and other current assets aggregating \$66.5 million. The parent company also has back-up credit lines with banks of \$19.0 million. Since 1979, the parent company has had no need to use available back-up lines of credit.

The following table sets forth information regarding the Company s contractual cash obligations as of December 31, 2010:

			Pay	ments Due by Po	eriod		
Contractual	Total	Less than	1 2	2 3	3 4	4 5	After 5
Obligations		1 Year	Years	Years	Years	Years	Years
Long-Term Debt <sup>[1]</sup>	\$ 169,947	\$ 30,000	\$ 10,000	\$ 82,024	\$ 2,149	\$	\$ 45,774
Operating Leases	49,726	4,843	4,481	4,479	4,747	4,550	26,626
Total Contractual Cash Obligations	\$ 219,673	\$ 34,843	\$ 14,481	\$ 86,503	\$ 6,896	\$ 4,550	\$ 72,400

[1] Based on contractual maturity date.

The following table sets forth information regarding the Company s obligations under other commercial commitments as of December 31, 2010:

				Am	ount of Cor	nmitment Exp	iration Per Period	l	
Other Commercial Commitments	Total	Ι	Less than 1 Year		1 2 Years	2 3 Years	3 4 Years	4 5 Years	 After 5 Years
Residential Loans Commercial Loans	\$ 59,108 27,007	\$	59,108 17,785	\$	7,288	\$	\$	\$	\$ 1,934
Total Loan Commitments Standby Letters of Credit	86,115 26,034		76,893 19,446		7,288 6,588				1,934
Other Commercial Commitments	68,775		68,590						185
Total Commercial Commitments	\$ 180,924	\$	164,929	\$	13,876	\$	\$	\$	\$ 2,119

The Company is obligated under certain unfunded benefit plans to make payments to individuals upon their retirement. While the Company is not aware of any near term plans for retirement of executive officers at this time, actuarial expected benefit payments are disclosed in Note 20 beginning on page 95 based on eligibility.

While past performance is not a guarantee of future performance, management believes that the parent company s funding sources (including dividends from all its subsidiaries) and the bank s funding sources will be adequate to meet their liquidity requirements in the future.

### CAPITAL

The Company and the bank are subject to risk-based capital regulations which quantitatively measure capital against risk-weighted assets, including certain off-balance sheet items. These regulations define the elements of the Tier 1 and Tier 2 components of total capital and establish minimum ratios of 4% for Tier 1 capital and 8% for Total Capital for capital adequacy purposes. Supplementing these regulations is a leverage requirement. This requirement establishes a minimum leverage ratio (at least 3% or 4%, depending upon an institution s regulatory status), which is calculated by dividing Tier 1 capital by adjusted quarterly average assets (after deducting goodwill). Information regarding the Company s and the bank s risk-based capital at December 31, 2010 and December 31, 2009 is presented in Note 24 beginning on page 107. In addition, the bank is subject to the provisions of the Federal Deposit Insurance Corporation Improvement Act of 1991 (FDICIA) which imposes a number of mandatory supervisory measures. Among other matters, FDICIA established five capital categories ranging from well capitalized to critically undercapitalized. Such classifications are used by regulatory agencies to determine a bank s deposit insurance premium, approval of applications authorizing institutions to increase their asset size or otherwise expand business activities or acquire other institutions. Under FDICIA, a well capitalized bank must maintain minimum leverage, Tier 1 and total capital ratios of 5%, 6% and 10%, respectively. The Federal Reserve Board applies comparable tests for holding companies such as the Company. At December 31, 2010, the Company and the bank exceeded the requirements for well capitalized institutions under the tests pursuant to FDICIA and of the Federal Reserve Board.

The bank regulatory agencies have encouraged banking organizations, including healthy, well run banking organizations, to operate with capital ratios substantially in excess of the stated ratios required to maintain well capitalized status. This has resulted from, among other things, current economic conditions, the global financial crisis and the likelihood, as described below, of increased formal capital requirements for banking organizations. In light of the foregoing, the Company and the bank expect that they will maintain capital ratios substantially in excess of these ratios.

The elements currently comprising Tier 1 capital and Tier 2 capital, the minimum Tier 1 capital and total capital ratios and the minimum leverage ratio may in the future be subject to change, as discussed in greater detail under the caption BUSINESS SUPERVISION AND REGULATION beginning on page 3.

### IMPACT OF INFLATION AND CHANGING PRICES

The Company s financial statements included herein have been prepared in accordance with U.S. GAAP, which require the Company to measure financial position and operating results primarily in terms of historical dollars. Changes in the relative value of money due to inflation or recession are generally not considered. The primary effect of inflation on the operations of the Company is reflected in increased operating costs. In management s opinion, changes in interest rates affect the financial condition of a financial institution to a far greater degree than changes in the inflation rate. While interest rates are greatly influenced by changes in the inflation rate, they do not necessarily change at the same rate or in the same magnitude as the inflation, the influence of general and local economic conditions and the monetary and fiscal policies of the United States government, its agencies and various other governmental regulatory authorities, among other things, as further discussed under the caption RISKS RELATED TO THE COMPANY S BUSINESS beginning on page 17 and under the caption ASSET/LIABILITY MANAGEMENT beginning on page 52.

#### RECENTLY ISSUED ACCOUNTING PRONOUNCEMENTS

See Adoption of New Accounting Standards and Newly Issued Not Yet Effective Standards in Note 1 of the Company s consolidated financial statements for information regarding recently issued accounting pronouncements and their expected impact on the Company s consolidated financial statements.

#### Sterling Bancorp CONSOLIDATED INTEREST RATE SENSITIVITY

To mitigate the vulnerability of earnings to changes in interest rates, the Company manages the repricing characteristics of assets and liabilities in an attempt to control net interest rate sensitivity. Management attempts to confine significant rate sensitivity gaps predominantly to repricing intervals of a year or less, so that adjustments can be made quickly. Assets and liabilities with predetermined repricing dates are classified based on the earliest repricing period. Based on the interest rate sensitivity analysis shown below, the Company s net interest income would increase during periods of rising interest rates and decrease during periods of falling interest rates.

				Repricing Date	9

### Sterling Bancorp NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

#### NOTE 1.

#### SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Sterling Bancorp (the parent company ) is a financial holding company, pursuant to an election made under the Gramm-Leach-Bliley Act of 1999. Throughout the notes, the term the Company refers to Sterling Bancorp and its subsidiaries and the term the bank refers to Sterling National Bank and its subsidiaries. The Company provides a full range of financial products and services, including business and consumer loans, commercial and residential mortgage lending and brokerage, asset-based financing, factoring/accounts receivable management services, trade financing, equipment financing, and deposit services. The Company has operations principally in New York and conducts business throughout the United States.

The Company s financial statements are prepared in accordance with U.S. generally accepted accounting principles (U.S. GAAP), which, effective for all interim and annual periods ending after September 15, 2009, principally consist of the Financial Accounting Standards Board (FASB) Accounting Standards Codification (Codification). FASB Codification Topic 105: *Generally Accepted Accounting Principles* establishes the FASB Codification as the source of authoritative accounting principles recognized by the FASB to be applied by nongovernmental entities in the preparation of financial statements in conformity with generally accepted accounting principles. Rules and interpretive releases of the Securities and Exchange Commission (SEC), under authority of federal securities laws, are also sources of authoritative guidance for SEC registrants. All guidance contained in the FASB Codification carries an equal level of authority. All non-grandfathered, non-SEC accounting literature not included in the FASB Codification is superseded and deemed non-authoritative.

The following summarizes the significant accounting policies of the Company with specific references to the FASB Codification.

#### (a) Basis of Presentation

The consolidated financial statements include the accounts of the parent company and its subsidiaries, principally the bank, after elimination of intercompany transactions.

Generally, U.S. GAAP requires that all entities in which a company has a controlling financial interest be consolidated. The Company determines whether it has a controlling financial interest in an entity by first evaluating whether it holds ownership of a majority voting interest. However, certain entities may not have voting interests or decision-making abilities because the controlling financial interest is achieved through other arrangements. These variable interest entities (VIEs) may still require consolidation even though equity investors do not have the typical characteristics of a controlling financial interest or do not have sufficient equity at risk for the legal entity to finance its activities without additional subordinated financial support. A controlling financial interest in a VIE is present when an enterprise has a variable interest, or a combination of variable interests, that will absorb a majority of the entity s expected losses, receive a majority of the entity s expected residual returns, or both. The enterprise with a controlling financial interest, known as the primary beneficiary, consolidates the VIE. The parent company s wholly-owned subsidiary, Sterling Bancorp Trust I, is a VIE for which the Company is not the primary beneficiary. Accordingly, the accounts of this entity are not included in the Company s consolidated financial statements.

#### (b) General Accounting Policies

The preparation of financial statements in accordance with U.S. GAAP requires management to make assumptions and estimates which impact the amounts reported in those statements and are, by their nature, subject to change in the future as additional information becomes available or as circumstances vary. Actual results could differ from management s current estimates, as a result of changing conditions and future events. The current economic environment has increased the degree of uncertainty inherent in these significant estimates. Several accounting estimates are particularly critical and are susceptible to significant near-term change, including the allowance for loan losses and asset impairment judgments, such as other-than-temporary declines in the value of securities and the accounting for income taxes. The judgments used by management in applying these critical accounting policies may be affected by a further and prolonged deterioration or lack of significant improvement in the economic environment, which may result in changes to future financial results. For example, subsequent evaluations of the loan portfolio, in light of the factors then prevailing, may result in significant changes in the allowance for loan losses in future periods, and the inability to collect outstanding principal may result in increased loan losses.

The Company evaluates subsequent events through the date that the financial statements are issued.

Certain reclassifications have been made to the prior years consolidated financial statements to conform to the current presentation. Throughout the notes, dollar amounts presented in tables are in thousands, except per share data.

#### (c) Adoption of New Accounting Standards

In June 2009, the FASB amended guidance for consolidation of variable interest entity guidance by replacing the quantitative-based risks and rewards calculation for determining which enterprise, if any, has a controlling financial interest in a variable interest entity with an approach focused on identifying which enterprise has the power to direct the activities of a variable interest entity that most significantly impact the entity s economic performance and (1) the obligation to absorb losses of the entity or (2) the right to receive benefits from the entity. Additional disclosures about an enterprise s involvement in VIEs are also required. This guidance is effective as of the beginning of each reporting entity s first annual reporting period that begins after November 15, 2009, for interim periods within that first annual reporting period, and for interim and annual reporting periods thereafter. Early adoption is prohibited. The effect of adopting this new guidance did not have a material impact on the Company s financial statements.

In January 2010, FASB issued guidance that requires expanded disclosures related to fair value measurements including (i) the amounts of significant transfers of assets or liabilities between Levels 1 and 2 of the fair value hierarchy and the reasons for the transfers (ii) the reasons for transfers of assets or liabilities in or out of Level 3 of the fair value hierarchy, which significant transfers disclosed separately, (iii) the policy for determining when transfers between levels of the fair value hierarchy are recognized and (iv) for recurring fair value measurements of assets and liabilities in Level 3 of the fair value hierarchy are recognized and (iv) for recurring fair value measurements of assets and liabilities in Level 3 of the fair value measurement disclosures should be provided for each class of assets and liabilities (rather than major category), which would generally be a subset of assets or liabilities within a line in statement of financial position and (ii) companies should provide disclosures about the valuation techniques and inputs used to measure fair value hierarchy. The disclosures related to the gross presentation of purchases, sales, issuances and settlements of assets and liabilities included in Levels 2 and 3 of the fair value hierarchy are required for the Company beginning January 1, 2011. The remaining disclosure requirements and clarifications made by ASU 2010-06 became effective for the Company on January 1, 2010. The effect of adopting this new guidance did not have a material impact on the Company's financial statements.

In March 2010, FASB issued guidance that clarifies that the only form of an embedded credit derivative that is exempt from the embedded derivative bifurcation requirements are those that relate to the subordination of one financial instrument to another. As a result, entities that have contracts containing an embedded credit derivative feature in a form other than such subordination may need to separately account for the embedded credit derivative feature. The provisions of this guidance became effective for the Company on July 1, 2010 and did not have a significant impact on the Company s financial statements.

In July 2010, FASB issued guidance that requires entities to provide disclosures designed to facilitate financial statement users evaluation of (i) the nature of credit risk inherent in the entity s portfolio of financing receivables, (ii) how that risk is analyzed and assessed in arriving at the allowance for credit losses and (iii) the changes and reasons for those changes in the allowance for credit losses. Disclosures must be disaggregated by portfolio segment, the level at which an entity develops and documents a systematic method for determining its allowance for credit losses, and class of financing receivables, which is generally a disaggregation of portfolio segment. The required disclosures include, among other things, a roll-forward of the allowance for credit losses as well as information about modified, impaired, nonaccrual and past due loans and credit quality indicators. This guidance became effective for the Company s financial statements as of December 31, 2010, as it relates to disclosures required as of the end of a reporting period. Disclosures that relate to activity during a reporting period will be required for the Company s financial statements that include periods beginning on or after January 1, 2011.

### (d) Newly Issued Not Yet Effective Standards

In December 2010, FASB issued guidance that modifies Step 1 of the goodwill impairment test for reporting units with zero or negative carrying amounts. For those reporting units, an entity is required to perform Step 2 of the goodwill impairment test if it is more likely than not that a goodwill impairment exists. In determining whether it is more likely than not that goodwill impairment exists, an entity should consider whether there are any adverse qualitative factors indicating that an impairment may exist. The qualitative factors are consistent with the existing guidance which requires that goodwill of a reporting unit be tested for impairment between annual tests if an event occurs or circumstances change that would more likely than not reduce the fair value of a reporting unit below its carrying amount.

The provisions of this guidance will be effective for the Company for fiscal year and interim periods beginning after December 15, 2010. Early adoption is not permitted. The adoption of this guidance is not expected to have a material impact on the Company s financial statements.

In December 2010, FASB issued guidance that specifies that if a public entity presents comparative financial statements, the entity should disclose revenue and earnings of the combined entity as though the business combination(s) that occurred during the current year had occurred as of the beginning of the comparable prior annual reporting period only. This guidance also expands the supplemental pro forma disclosures to include a description of the nature and amount of material, nonrecurring pro forma adjustments directly attributed to the business combination included in the reported pro forma revenue and earnings. The provisions of this guidance will be effective prospectively for business combinations for which the acquisition date is on or after the beginning of the first annual reporting period beginning on or after December 15, 2010. Early adoption is permitted. The adoption of this guidance is not expected to have a material impact on the Company s financial statements.

In January 2011, FASB issued guidance that temporarily delays the effective date of the disclosures about troubled debt restructuring for public entities. The delay is intended to allow the Board time to complete its deliberations on what constitutes a troubled debt restructuring. The effective date of the new disclosures about troubled debt restructurings for public entities and the guidance for determining what constitutes a troubled debt restructuring will then be coordinated. Currently, that guidance is anticipated to be effective for interim and annual periods ending after June 15, 2011.

### (e) Investment Securities

Securities are designated at the time of acquisition as available for sale or held to maturity. Securities that the Company will hold for indefinite periods of time and that might be sold in the future as part of efforts to manage interest rate risk or in response to changes in interest rates, changes in prepayment risk, changes in market conditions or changes in economic factors are classified as available for sale and carried at estimated fair values. Net aggregate unrealized gains or losses are reported, net of taxes, as a component of shareholders equity through other comprehensive income. Securities that the Company has the positive intent and ability to hold to maturity are designated as held to maturity and are carried at amortized cost, adjusted for amortization of premiums and accretion of discounts over the period to maturity. Interest income includes the amortization of purchase premiums and accretion of purchase discounts. Gains and losses realized on sales of securities are determined on the specific identification method and are reported in noninterest income.

Securities pledged as collateral are disclosed parenthetically in the Consolidated Balance Sheets if the secured party has the right by contract or custom to sell or repledge the collateral. Securities are pledged by the Company to secure trust and public deposits, securities sold under agreements to repurchase, advances from the FHLB and for other purposes required or permitted by law.

A periodic review is conducted by management to determine if the decline in the fair value of any security appears to be other-than-temporary. Factors considered in determining whether the decline is other-than-temporary include, but are not limited to: the length of time and the extent to which fair value has been below cost; the financial condition and near-term prospects of the issuer; and the Company s intent to sell. If the decline is deemed to be other-than-temporary, and the Company does not have the intent to sell and will not likely be required to sell, the security is written down to a new cost basis and the resulting credit component of the loss is reported in noninterest income and the remainder of the loss is recorded in shareholders equity. If the Company intends to sell or will be required to sell, the full amount of the other-than-temporary impairment is recorded in noninterest income.

### (f) Loans

Loans (including factored accounts receivable), other than those held for sale, are reported at their principal amount outstanding, net of unearned discounts and unamortized nonrefundable fees and direct costs associated with their origination or acquisition. Interest earned on loans is credited to income based on loan principal amounts outstanding at appropriate interest rates. Origination and other nonrefundable fees net of direct costs and discounts on loans (excluding factored accounts receivable) are credited to income over the terms of the loans using a method that results in an approximately constant effective yield. Nonrefundable fees on the purchase of accounts receivable are credited to Accounts receivable management/factoring commissions and other fees at the time of purchase, which, based on our analysis, does not produce results that are materially different from the results under the amortization method specified in FASB Codification Topic 310: *Receivables*.

Mortgage loans held for sale, including deferred fees and costs, are reported at the lower of cost or fair value as determined

by outstanding commitments from investors or current investor yield requirements calculated on the aggregate loan basis, and are included under the caption Loans held for sale in the Consolidated Balance Sheets. Net unrealized losses, if any, are recognized in a valuation allowance by a charge to income. Mortgage loans are sold, including servicing rights, without recourse. Gains or losses resulting from sales of mortgage loans, net of unamortized deferred fees and costs, are recognized when the proceeds are received from investors and are included under the caption

Mortgage banking income in the Consolidated Statements of Income. In connection with its mortgage banking activities, the Company has commitments to fund loans held for sale and commitments to sell loans which are considered derivative instruments under FASB Codification Topic 815: *Derivatives and Hedging*. The fair values of these free-standing derivative instruments were immaterial at December 31, 2010 and 2009.

A loan is impaired when, based on current information and events, it is probable that the Company will be unable to collect all amounts due according to the original contractual terms of the loan agreement. Loans, for which the terms have been modified, and for which the borrower is experiencing financial difficulties, are considered troubled debt restructurings and classified as impaired. Under the provisions of FASB Codification Topic 310: *Receivables*, individually identified impaired loans are measured based on the present value of payments expected to be received, using the historical effective loan rate as the discount rate. Alternatively, measurement may also be based on observable market prices; or, for loans that are solely dependent on the collateral for repayment, measurement may be based on the fair value of the collateral. If the recorded investment in the impaired loan exceeds fair value, a valuation allowance is required as a component of the allowance for loan losses. Interest payments on impaired loans are typically applied to principal unless collectibility of the principal amount is reasonably assured, in which case interest is recognized on a cash basis. Impaired loans, or portions thereof, are charged off when deemed uncollectible.

Nonaccrual loans are those on which the accrual of interest has ceased. Loans, including loans that are individually identified as being impaired under FASB Codification Topic 310: *Receivables*, are generally placed on nonaccrual status immediately if, in the opinion of management, principal or interest is not likely to be paid in accordance with the terms of the loan agreement, or when principal or interest is past due 90 days or more and collateral, if any, is insufficient to cover principal and interest. Interest accrued but not collected at the date a loan is placed on nonaccrual status is reversed against interest income. Interest income is recognized on nonaccrual loans only to the extent received in cash. However, where there is doubt regarding the ultimate collectibility of the loan principal, cash receipts, whether designated as principal or interest, are thereafter applied to reduce the carrying value of the loan. Loans are restored to accrual status only when interest and principal payments are brought current and future payments are reasonably assured.

### (g) Allowance for Loan Losses

The allowance for loan losses is a reserve established through a provision for loan losses charged to expense, which represents management s best estimate of losses that have been incurred within the existing portfolio of loans. The allowance, in the judgment of management, is necessary to reserve for estimated loan losses and risks inherent in the loan portfolio. The allowance for loan losses includes allowance allocations calculated in accordance with FASB Codification Topic 310: *Receivables* and allowance allocations calculated in accordance with FASB Codification regarding the Company s policies and methodology used to estimate the allowance for loan losses is presented in Note 6 Loans and Allowance for Loan Losses.

#### (h) Federal Reserve and Federal Home Loan Bank Stock

The bank is required to maintain a minimum level of investment in Federal Home Loan Bank of New York (FHLB) stock based on specific percentages of its outstanding mortgages, total assets or FHLB advances. FHLB and Federal Reserve Bank (FRB) stocks are restricted because they may only be sold to another member institution or the FHLB or FRB at their par values. Due to restrictive terms, and the lack of a readily determinable market value, FHLB and FRB stocks are shown separately in the Consolidated Balance Sheets, carried at cost and evaluated for ultimate recovery of par value.

#### (i) Goodwill and Other Intangible Assets

Goodwill, representing the excess of the purchase price over the fair value of net assets of businesses acquired, reflected in the Consolidated Balance Sheets arose from the parent company s acquisition of the bank (in 1968) and the acquisition of Sterling Resource Funding Corp (in 2006). Goodwill is assigned to the Corporate lending unit for segment reporting purposes. Effective January 1, 2002, the Company adopted the provisions of FASB Codification Topic 350: *Intangibles Goodwill and Other*, under which goodwill is deemed to have an indefinite useful life, and therefore not amortized, and the Company is required to complete an annual assessment by segment for any impairment of goodwill. Impairment

exists when a reporting unit s carrying value of goodwill exceeds its fair value. The Company has selected December 31 as the date to perform the annual impairment testing. The impairment would be treated as an expense in the income statement. There was no impairment expense recorded in 2010, 2009 or 2008.

Goodwill is the only intangible asset with an indefinite life on our balance sheet and is tested for impairment using a two-step approach that initially involves the identification of reporting units and the estimation of their respective fair values. If the fair value of a reporting unit is less than the carrying value of the reporting unit, a goodwill impairment loss would be recognized as a charge to expense for any excess of the goodwill carrying amount over its implied fair value.

Other intangible assets consist of acquired customer contracts and assets arising from a purchase of assets as of April 6, 2009. They were initially measured at fair value and then are amortized on a straight-line method over their estimated useful life of 2 years.

### (j) Premises and Equipment

Premises and equipment, excluding land, are stated at cost less accumulated depreciation or amortization as applicable. Land is reported at cost. Depreciation is computed on a straight-line basis and is charged to noninterest expense over the estimated useful lives of the related assets. Useful lives are 7 years for furniture fixtures and equipment, between 3 and 7 years for ATMs, computer hardware and software, and 10 years for building improvements. Amortization of leasehold improvements is charged to noninterest expense over the terms of the respective leases or the estimated useful lives of the improvements, whichever is shorter. Maintenance, repairs and minor improvements are charged to noninterest expenses as incurred.

#### (k) Foreclosed Assets

Assets acquired through or instead of loan foreclosure are held for sale and are initially recorded at fair value less estimated selling costs when acquired, establishing a new cost basis. Costs after acquisition are generally expensed. If the fair value of the asset declines, a write-down is recorded through expense. The valuation of foreclosed assets is subjective in nature and may be adjusted in the future because of changes in economic conditions.

### (1) Cash Surrender Value of Life Insurance Policies

The bank invested in Bank Owned Life Insurance (BOLI) policies to fund certain future employee benefit costs. In addition, the parent company and the bank own endorsement split-dollar life insurance policies on certain key executives. The cash surrender value, net of surrender charges, of these insurance policies is recorded in the Consolidated Balance Sheets under the caption Cash surrender value of bank owned and other life insurance policies. Changes in the cash surrender value, net of surrender charges, of Income under the caption Income from bank owned life insurance policies. Changes in the cash surrender value, net of surrender charges, of the endorsement split-dollar life insurance policies are netted against premium expense in the Consolidated Statements of Income under the caption Employee benefits. As discussed more fully in Note 20 beginning on page 95, the Company adopted new accounting requirements related to bank-owned life insurance included in FASB Codification Topic 715: *Compensation Retirement Benefits* on January 1, 2008 as a change in accounting principle through a cumulative-effect adjustment to retained earnings.

### (m) Repurchase Agreements

The Company sells certain securities under agreements to repurchase and receives cash as collateral. The agreements are treated as collateralized financing transactions and the obligations to repurchase securities sold are reflected as a liability in the accompanying Consolidated Balance Sheets. The carrying value of the securities underlying the agreements remains reflected as an asset.

#### (n) Derivative Financial Instruments

The Company s hedging policies permit the use of various derivative financial instruments to manage interest rate risk or to hedge specified assets and liabilities. All derivatives are recorded at fair value on the Company s Consolidated Balance Sheets. To qualify for hedge accounting, derivatives must be highly effective at reducing the risk associated with the exposure being hedged and must be designated as a hedge at the inception of the derivative contract. The Company considers a hedge to be highly effective if the change in fair value of the derivative hedging instrument is within 80% to 120% of the opposite change in the fair value of the derivative and the hedged item attributable to the hedged risk. If derivative instruments are designated as hedges of fair values, and such hedges are highly effective, both the change in the fair value of the derivative and the hedged item are included in current earnings. Fair value adjustments related to cash flow hedges are recorded in other comprehensive income and are reclassified to earnings when the hedged transaction is reflected in

earnings. Ineffective portions of hedges are reflected in earnings as they occur. Actual cash receipts and/or payments and related accruals on derivatives related to hedges are recorded as adjustments to the interest income or interest expense associated with the hedged item. During the life of the hedge, the Company formally assesses whether derivatives designated as hedging instruments continue to be highly effective in offsetting changes in the fair value or cash flows of hedged items. If it is determined that a hedge has ceased to be highly effective, the Company will discontinue hedge accounting prospectively. At such time, previous adjustments to the carrying value of the hedged item are reversed into current earnings and the derivative instrument is reclassified to a trading position recorded at fair value. Changes in the fair value of derivative financial instruments not designated as hedges for accounting purposes are reflected in income or expense at measurement dates. At December 31, 2010 and 2009, the Company was not a party to any financial instrument derivative agreement.

The Company may be required to recognize certain contracts and commitments as derivatives when the characteristics of those contracts and commitments meet the definition of a derivative.

#### (o) Impact of Current Economic Conditions

Current economic conditions, including illiquid credit markets, volatile equity, foreign currency and energy markets, and reduced consumer spending, have combined to increase risk and uncertainty across industries. The Company considers the current economic conditions and their impact on the financial results and operations of the Company discussed above, including the determination of fair value of investment securities or derivative financial instruments the Company holds, the establishment of allowance for loan losses, the impairment of any asset and any other amounts reported in the financial statements of the Company that may be affected in the near term.

### (p) Income Taxes

The Company utilizes the asset and liability method of accounting for income taxes. Deferred income tax expense (benefit) is determined by recognizing deferred tax assets and liabilities for the future tax consequences attributable to differences between the financial statement carrying amounts of existing assets and liabilities and their respective tax bases. The realization of deferred tax assets is assessed and a valuation allowance provided for that portion of the assets for which it is more likely than not that it will not be realized. Deferred tax assets and liabilities are measured using enacted tax rates and will be adjusted for the effects of future changes in tax laws or rates, if any.

For income tax purposes, the parent company files: a consolidated Federal income tax return; combined New York City and New York State income tax returns; and separate state income tax returns for its out-of-state subsidiaries. The parent company, under tax sharing agreements, either pays or collects current income taxes due to or due from its subsidiaries.

Starting in 2009, New York State tax law generally requires a REIT that is majority owned by a New York State bank to be included in the bank s combined New York State tax return. The Company believes that it qualifies for the small-bank exception to this rule. If, contrary to this belief, Sterling Real Estate Holding Company, Inc. were required to be included in the Company s New York State combined tax return, the Company s effective tax rate would increase.

Under the small-bank exception, dividends received by the bank from SREHC, a real estate investment trust, are subject to a 60% dividends-received deduction, which results in only 40% of the dividends being subject to New York State tax. Currently, the New York City banking corporation tax operates in the same manner in this respect. The possible reform of the New York State franchise and banking corporation tax laws mentioned under ITEM 1A. RISK FACTORS RISKS RELATED TO THE COMPANY S BUSINESS Possible New York State Legislative Changes May Negatively Affect the Amount of Taxes We Pay in Future Years could require SREHC to file a combined New York State return with the Company and substantially eliminate the benefit of the 60% dividends-received deduction by causing generally all of SREHC s income to be subject to New York State tax as part of the Company s combined return.

#### (q) Statements of Cash Flows

For purposes of reporting cash flows, cash and cash equivalents include cash and amounts due from banks. Net cash flows are reported for customer loan and deposit transactions, interest-bearing deposits in other financial institutions, federal funds purchased and repurchase agreements.

#### (r) Stock Incentive Plan

At December 31, 2010, the Company had a stock-based employee compensation plan, which is described more fully in Note 19.

Employee stock options generally expire ten years from the date of grant and become non-forfeitable one year from date of grant, although if necessary to qualify to the maximum

extent possible as incentive stock options, these options become exercisable in annual installments. Director non-qualified stock options generally expire five years from the date of grant and become non-forfeitable and become exercisable in four annual installments starting one year from the date of grant. Stock-based compensation is recognized in compensation expense as described more fully in Note 19 over the period from the date of grant to the date on which the options become non-forfeitable.

#### (s) Earnings Per Common Share

Earnings per common share is computed using the two-class method. Basic earnings per common share is computed by dividing net earnings allocated to common shareholders by the weighted-average number of common shares outstanding during the applicable period, excluding participating securities. Participating securities include non-vested stock awards such as rewards of restricted shares of common shares. Non-vested stock awards are considered participating securities because holders of these securities receive non-forfeitable dividends at the same rate as holders of the Company s common stock. Diluted earnings per common share is computed using the weighted-average number of shares determined for the basic earnings per common share computation plus the dilutive effect of stock compensation using the treasury stock method.

#### (t) Immaterial Corrections

Management has made an immaterial correction to the classification in prior years balance sheet of certain loan principal payments received from borrowers. Since a comparable amount of loan payments has been misclassified in earlier years, the correction also resulted in a decrease of approximately \$2.6 million in net cash used in investing activities and an equal decrease in net cash provided by financing activities in 2008. The correction had no effect on the consolidated statements of income. The revisions to the financial statements were not considered material to any prior periods.

#### (u) Segments

Internal financial information is primarily reported and aggregated in three lines of business; corporate lending, real estate lending and company-wide treasury.

#### NOTE 2.

### ACQUISITION

On April 6, 2009, Sterling Factors Corporation, a subsidiary of the bank, acquired substantially all of the assets and customer accounts of DCD Capital, LLC and DCD Trade Services, LLC for a cash price of \$21.3 million. The acquired assets and customer accounts are included in a division of Sterling Factors Corporation under the name Sterling Trade Capital. As part of the purchase, an intangible asset related to the customer contracts and accounts acquired was created and valued at \$1.1 million. This intangible asset is being amortized on a straight-line method over the estimated 2-year life of the asset. At December 31, 2010 and 2009, the intangible asset had a carrying value of \$138 thousand and \$688 thousand, respectively.

#### NOTE 3.

### CASH AND DUE FROM BANKS

The Company maintains deposits with other financial institutions in amounts that exceed federal deposit insurance coverage. Management regularly evaluates the credit risk associated with the counterparties to these transactions and believes that the Company is not exposed to any significant credit risks.

The bank is required to maintain average reserves, net of vault cash, on deposit with the Federal Reserve Bank of New York against outstanding domestic deposits and certain other liabilities. The reserves maintained, which are reported in cash and due from banks, were \$34.6 million and \$35.6 million at December 31, 2010 and 2009, respectively. Average required reserves during 2010 and 2009 were \$5.2 million for both years.

Beginning on October 9, 2008, the Federal Reserve started to pay interest on required reserve balances and excess balances. For the years ended December 31, 2010 and 2009, the Company received interest from the Federal Reserve amounting to \$76 thousand and \$87 thousand, respectively.

## NOTE 4. MONEY MARKET INVESTMENTS

The Company s money market investments include interest-bearing deposits with other banks and Federal funds sold. The following table presents information regarding money market investments.

Years Ended Decembe	Ended December 31, 2010		2009	2008	
Interest-bearing depo	osits with other banks

The Company invests principally in obligations of U.S. government corporations and government sponsored enterprises and other investment-grade securities. The fair value of these investments fluctuates based on several factors, including credit quality and general interest rate changes. The Company determined that it is not more likely than not that the Company would be required to sell any investments before anticipated recovery.

At December 31, 2010, approximately \$105.0 million, representing approximately 13.30%, of the Company sheld to maturity and available for sale securities are comprised of securities issued by financial service companies/banks including single-issuer trust preferred securities (6 issuers), corporate debt (19 issuers) and equity securities (4 issuers). These investments may pose a higher risk of future impairment charges as result of a continued deterioration or lack of significant improvement of the U.S. economy. The Company would be required to recognize impairment charges on these securities if they suffer a decline in value

that is considered other than temporary. Numerous factors, including lack of liquidity for re-sales of certain investment securities, absence of reliable pricing information for investment securities, adverse changes in business climate, adverse actions by regulators, or unanticipated changes in the competitive environment could have a negative effect on the Company s investment portfolio and may result in other-than-temporary impairment on certain investment securities in future periods.

The following table presents information regarding securities available for sale with temporary unrealized losses for the periods indicated:

### \*TARP obligation was repaid prior to December 31, 2010.

At December 31, 2010, the Company held 6 security positions of single-issuer bank trust preferred securities and 34 security positions of corporate debt securities issued by financial institutions all which are paying in accordance with their terms and have no deferrals of interest or other deferrals. In addition, management analyzes the performance of the issuers on a quarterly basis, including a review of the issuer s most recent bank regulatory report to assess credit risk and the probability of impairment of the contractual cash flows of the applicable securities. Based upon management s fourth quarter review, all of the issuers have maintained performance levels adequate to support the contractual cash flows of the securities.

As of December 31, 2010, management does not have the intent to sell any of the securities classified as available for sale in the tables above and believes that it is more likely than not that the Company will not have to sell any such securities before recovery of cost.

During 2008, the Company recognized OTTI charges on 1 trust preferred security and 1 corporate debt security totaling \$1.7 million which were included in noninterest income under the caption Other-than-temporary impairment losses. These securities were subsequently sold at a minimal gain.

The following table presents information regarding securities held to maturity with temporary unrealized losses for the periods indicated:

At December 31, 2010, the Company held 1 residential mortgaged-backed debt security, in the held to maturity portfolio, that was in an unrealized loss position for more than 12 months. This security was an obligation of a government sponsored enterprise which guarantees principal and interest payments. Management has concluded that the unrealized loss is due to changes in market interest rates and/or changes in securities markets which resulted from temporary illiquidity and/or uncertainty in those markets. Further, management has made an evaluation that the Company has the ability to hold this investment until maturity and, given its current intention to do so, anticipates that it will realize the full carrying value of its investment. As a result, the unrealized loss is deemed to be temporary.

Information regarding calls of held to maturity securities is as follows:

Years Ended December 31,	2010	2009	2008
Proceeds Gross gains	\$ 142,380 368	\$ 40,000	\$

Information regarding sales and/or calls of the available for sale securities is as follows:

Years Ended December 31,	2010	2009	2008
Sales:			
Proceeds	\$ 169,517	\$ 233,026	\$ 2,555

Gross gains	145	116	
Gross losses	288		

Investment securities are pledged to secure trust and public deposits, securities sold under agreements to repurchase, borrowings from the Federal Home Loan Bank of New York and/or the Federal Reserve Bank of New York, and for other purposes required or permitted by law.

### NOTE 6.

### LOANS AND ALLOWANCE FOR LOAN LOSSES

The major components of domestic loans held for sale and loans held in portfolio are as follows:

December 31,	2010	2009
Loans held for sale, net of valuation reserve (\$113 at December 31, 2010 and \$7 at December 31, 2009)		
Real estate residential mortgage	\$ 32,049	\$ 33,889
Loans held in portfolio, net of unearned discounts		
Commercial and industrial	620,136	551,447
Equipment financing receivables	161,054	219,198
Factored receivables	162,070	140,265
Real estate residential mortgage	127,695	124,681
Real estate commercial mortgage	96,991	92,614
Real estate construction and land development	25,624	24,277
Loans to individuals	11,370	12,984
Loans to depository institutions	15,425	20,000
Loans to nondepository institutions	112,882	35,591
Loans held in portfolio, gross	1,333,247	1,221,057
Less unearned discounts	19,013	25,642
Loans held in portfolio, net of unearned discounts	1,314,234	1,195,415
	\$ 1,346,283	\$ 1,229,304

At December 31, 2010, the bank had qualified loans, at carrying value of approximately \$367.8 million, available to secure borrowings from the FHLB and the FRB of which \$65.7 million were pledged to secure FHLB borrowings at December 31, 2010. There were no loans pledged at December 31, 2009.

## Loan Origination/Risk Management

The Company has lending policies and procedures in place that are designed to maximize loan income within an acceptable level of risk. Management reviews and approves these policies and procedures on a regular basis. A reporting system supplements the review process by providing management with frequent reports related to loan production, loan quality, concentrations of credit, loan delinquencies and non-performing and potential problem loans. Diversification in the loan portfolio is a means of managing risk associated with fluctuations in economic conditions.

#### Commercial and Loans to Nondepository Institutions

Sterling provides a full range of loans to small and medium-sized businesses with the objective of establishing longer term relationships. Loans generally range in size up to \$20 million, tailored to meet customers long- and short-term needs, and include secured and unsecured lines of credit and business installment loans.

Loans generally are collateralized by accounts receivable, inventory and other assets. Sterling also provides back-office services, i.e., processing payroll, generating customer invoices, credit collection assistance and related payroll services.

#### Factoring

Factoring provides a complete finance package that combines working capital financing, credit risk protection, and accounts receivable management for companies in a variety of industries.

Clients can draw an advance as accounts receivables are sold/assigned to Sterling. By purchasing a client s accounts receivable, Sterling records the receivable as an asset, and records a liability for the funds due to the client. Sterling also, on request, advances funds to its client prior to the collection of receivables, charging interest on such advances and satisfying such advances by the collection of receivables.

#### Commercial Real Estate

Sterling offers a range of commercial real estate lending including financing on commercial buildings, retail properties and mixed use properties. Loans are predicated on cash flow of the property and the value of the property determined by an independent appraisal.

Loans are made at fixed or floating rates. Fixed rate loans are tied to Treasury or FHLB benchmarks and other indices. Floating rate loans are based on the prime rate or other index.

#### Equipment Financing

Sterling engages in direct lending and indirect lending. Direct lending is when requests for financing originate with an end user seeking to finance equipment up to 60 months. Indirect lending arises through relationships with equipment financing brokers.

In both cases, underwriting is initiated with full evaluations made based upon the applicant s historical performance, cash flow projections and value of equipment.

### Residential Mortgage

Residential mortgage loans, principally on single-family residences, are made primarily for re-sale into the secondary market. Offering both fixed and adjustable rate residential mortgage loan products, mortgages are focused on conforming credit, government insured FHA and other high quality loan products. Jumbo loans are also originated for sale into the secondary market, or brokered to third party providers.

The Company maintains an independent loan review process that reviews and validates the credit risk program on a periodic basis. Results of these reviews are presented to management. The loan review process complements and reinforces the risk identification and assessment decisions made by lenders.

### **Concentrations of Credit**

There are no industry concentrations (exceeding 10% of loans, gross) of loans held in portfolio. Approximately 69% of loans are to borrowers located in the New York metropolitan area. A further deterioration in economic conditions within the region including a decline in real estate values, higher unemployment and other factors which could adversely impact small and mid-sized businesses, could have a significant adverse impact on the quality of the Company s loan portfolio. In addition, a decline in real estate values and higher unemployment within the mid-Atlantic region and North Carolina could adversely impact the Company s residential real estate loan portfolio.

Approximately 20.7% or \$26.8 million and 22.4% or \$29.2 million of the Company s net interest income and noninterest income are related to real estate lending in 2010 and 2009, respectively. Real estate prices in the U.S. market decreased significantly during 2009 and have continued to decrease in 2010. Continuing declines in real estate values could necessitate charge-offs in our mortgage loan portfolio that may impact our operating results. In addition, a sustained period of declining real estate values combined with the continued turbulence in the financial and credit markets would continue to limit our mortgage related revenues.

As of December 31, 2010, approximately 67.0% of the Company s loan portfolio consisted of commercial and industrial, factored receivables, construction and commercial real estate loans. Because the Company s loan portfolio contains a number of commercial and industrial, construction and commercial real estate loans with relatively large balances, the deterioration of one or a few of these loans could cause a significant increase in non-performing loans.

## **Related Party Loans**

Loans are made to officers or directors (including their immediate families) of the Company or for the benefit of corporations in which they have a beneficial interest subject to applicable regulations. There were no outstanding balances on such loans in excess of \$60 thousand to any individual or entity at December 31, 2010 or 2009.

#### Nonperforming Loans

Nonaccrual loans are those on which the accrual of interest has ceased. Loans, including loans that are individually identified as being impaired under FASB Codification Topic 310: *Receivables*, are generally placed on nonaccrual status immediately if, in the opinion of management, principal or interest is not likely to be paid in accordance with the terms of the loan agreement, or when principal or interest is past due 90 days or more and collateral, if any, is insufficient to cover principal and interest. Interest accrued but not collected at the date a loan is placed on nonaccrual status is reversed against interest income. Interest income is recognized on nonaccrual loans only to the extent received in cash. Where there is doubt regarding the ultimate collectibility of the loan principal, cash receipts, whether designated as principal or interest, are thereafter applied to reduce the carrying value of the loan. Loans are restored to accrual status when interest and principal payments are brought current and future payments are reasonable assured.

Nonaccrual loans at December 31, 2010 and 2009 totaled \$6.6 million and \$18.0 million, respectively. The interest income that would have been earned on nonaccrual loans outstanding at December 31, 2010, 2009 and 2008, in accordance with their original terms, is estimated to be \$902 thousand, \$1.5 million and \$731 thousand, respectively, for the years then ended. Applicable interest income actually realized was \$204 thousand, \$743 thousand and \$321 thousand, respectively, for the aforementioned years, and there were no commitments to lend additional funds on nonaccrual loans.

The following table sets forth the amount of nonaccrual loans of the Company at the end of each of the two most recent fiscal years.

December 31,	2010	2009
Nonaccrual loans		
Commercial and industrial	\$ 1,01	4,231
Equipment financing receivables	89	<b>2</b> 11,960
Factored receivables		
Real estate residential mortgage	1,61	1,786
Real estate commercial mortgage	3,12	1
Real estate construction and land development		
Loans to individuals		
Total nonaccrual loans	\$ 6,64	<b>\$</b> 17,977

The following table provides information regarding the past due status of loans at December 31, 2010:

December 31, 2010	30 59 Days Past Due	60 89 Days Past Due	90 & Over Past Due	Total Past Due	Current	Total Loans	MEMO 90 & Over and Still Accruing
Commercial and industrial	\$ 16,899	\$ 4,693	\$ 1,015	\$ 22,607	\$ 595,616	\$ 618,223	\$ 1
Equipment financing receivables	1,399	579	958	2,936	141,299	144,235	66

Loans to individuals	52			52	11,318	11,370	
Loans to depository institutions					15,425	15,425	
Loans to nondepository institutions					112,882	112,882	
Total loans, net of unearned discount	\$ 34,594	\$ 8,449	\$ 6,958	\$ 50,001	\$ 1,296,282	\$ 1,346,283	\$ 314

At December 31, 2009, loans 90 days past due and still accruing included \$849 thousand of commercial and industrial loans and \$345 thousand equipment financing receivables.

#### Impaired Loans

Management considers a loan to be impaired when, based on current information and events, it is determined that the Company will not be able to collect all amounts due according to the loan contract, including scheduled interest payments. Determination of impairment is treated the same across all classes of loans on a loan-by-loan basis. When management identifies a loan as

impaired, the impairment is measured based on the present value of expected future cash flows, discounted at the loan's effective interest rate, except when the sole remaining source of repayment of the loan is the operation or liquidation of the collateral. In these cases management uses the current fair value of the collateral, less selling costs when foreclosure is probable, instead of discounted cash flows. If management determines that the value of the impaired loan is less than the recorded investment in the loan (net of previous charge-offs, deferred loan fees or costs and unamortized premium or discount), impairment is recognized through an allowance estimate or a charge-off to the allowance.

When the ultimate collectibility of the total principal of an impaired loan is in doubt and the loan is on nonaccrual status, all payments are applied to principal, under the cost recovery method. When the ultimate collectibility of the total principal of an impaired loan is not in doubt and the loan is on nonaccrual status, contractual interest is credited to interest income when received, under the cash basis method. Impaired loans, or portions thereof, are charged off when deemed uncollectible.

The following tables include the recorded investment and unpaid principal balances for impaired financing receivables with the associated allowance amount, if applicable. Management determined the specific allowance based on the present value of the expected future cash flows, discounted at the loan s effective interest rate, except when the remaining source of repayment for the loan is the operation or liquidation of the collateral. In those cases, the current fair value of the collateral, less selling costs was used to determine the specific allowance recorded.

The average recorded investment in accruing impaired restructured loans was approximately \$4.5 million, \$3.2 million and \$4.2 million for the years ended December 31, 2010, 2009 and 2008, respectively. The recognition of interest income on these accruing impaired loans is based upon an individual assessment of each loan; however, interest income is not accrued on a loan that is more than 90 days past due. Interest income recognized on these loans during impairment was approximately \$60 thousand, \$270 thousand and \$90 thousand for 2010, 2009 and 2008, respectively.

PAGE 80

As of December 31, 2008, \$4.2 million of loans were judged to be impaired within the scope of FASB Codification Topic 310: *Receivables*, with interest income recognized on a cash basis. The average recorded investment in impaired loans during the year ended December 31, 2008 was approximately \$4.3 million. The application of FASB Codification Topic 310: *Receivables* indicated that these loans required valuation allowances totaling \$285 thousand at December 31, 2008, which are included within the overall allowance for loan losses. The interest income that would have been earned on impaired loans outstanding at December 31, 2010, 2009 and 2008 in accordance with their original terms is estimated to be \$202 thousand, \$323 thousand and \$23 thousand, respectively, for the years then ended. Applicable interest income actually realized on a cash basis was \$184 thousand, \$270 thousand and \$-0-, respectively, for the aforementioned years, and there were no commitments to lend additional funds on impaired loans.

#### Credit Quality Indicators

As part of the ongoing monitoring of the credit quality of the Company s loan portfolio, management tracks certain credit quality indicators including trends related to (i) the risk grade of loans, (ii) the level of classified loans, (iii) charge-offs, (iv) nonperforming loans and (v) the general economic conditions in the New York metropolitan area.

The Company categorizes loans into risk categories based on relevant information about the ability of borrowers to service their debt, such as: current financial information, historical payment experience, credit documentation, public information, and current economic trends, among other factors. The Company has a process for analyzing non-homogeneous loans, such as commercial and commercial real estate loans, individually by grading the loans based on credit risk. This analysis occurs at varying times based on the type of loan as well as the loan balance and occurs at least once every 18 months for those loans greater than \$500,000.

For homogeneous loan pools, such as residential mortgages, leases, consumer loans, the Company uses payment status to identify the credit risk in these loan portfolios. Payment status is reviewed on a daily basis by the Company s personnel and on a monthly basis with respect to determining the adequacy of the allowance for loan losses. The payment status of these homogeneous pools at December 31, 2010 is included in the aging of the recorded investment of past due loans table above. In addition, the total nonperforming portion of these homogeneous loan pools at December 31, 2010 is presented in the recorded investment in nonaccrual loans table above.

The Company utilizes a risk grading matrix to assign a risk grade to each of its commercial loans. Loans under \$100,000 are not risk rated. Loans are graded on a scale of 1 to 9. A description of the general characteristics of the 9 risk grades is as follows:

*Risk Rating 1 & 2/High Quality/Minimal Risk* These loans are well secured by liquid or high quality, diversified, and readily marketable securities within the bank s defined margin requirements including cash surrender value of life insurance, or loans to strong privately held obligors secured by real estate with satisfactory loan to value, and support guarantors. They could include loans to publicly traded entities with strong credit ratings (A-1 or better) with Moody s or Standard & Poor s.

*Risk Rating 3 & 4/Very Good/Good Quality* These loans can be either unsecured or secured (with monthly monitoring of Accounts Receivable and/or Inventory) to adequately or moderately capitalized privately held obligors with satisfactory sales, revenue, earnings trends, cash flow, and leverage. These secured loans may be monitored in the Asset Based Lending or the Factoring Department to include control of cash receipts and defined formula advances. These categories could include loans to publicly traded entities with credit ratings of A-3 or lower by Moody s or Standard & Poor s.

*Risk Rating 5/Watch List* These loans are to companies with uneven financial performance containing exceptions to loan policy without mitigating factors. These loans may exist when the obligors experience temporary credit and/or structural deficiencies. Such credits have not been criticized by Loan Review. Close supervision is warranted to avoid further deterioration.

*Risk Rating 6/Special mention (OCC Definition)* Other Assets Especially Mentioned (OAEM) are loans that are currently protected but are potentially weak. Special Mention ratings have potential weaknesses which may, if not checked or corrected, weaken the asset or inadequately protect the bank s credit position at some future date. Such assets constitute an undue and unwarranted credit risk but not to the point of justifying a classification of substandard. The credit risk may be relatively minor yet constitute an unwarranted risk in light of the circumstances surrounding a specific asset.

*Risk Rating 7/Substandard (OCC Definition)* These loans are inadequately protected by the current sound worth and paying capacity of the obligor or of the collateral pledged, if any. Assets so classified must have a well-defined weakness that jeopardizes the liquidation of the debt. They are characterized by the distinct possibility that the Bank will sustain some loss if the deficiencies are not corrected. Loss potential, while existing in the aggregate amount of substandard assets, does not have to exist in individual assets classified as substandard.

*Risk Rating 8/doubtful (OCC Definition)* These loans have all the weakness inherent in one classified as substandard with the added characteristics that the weakness makes collection or liquidation in full, on the basis of currently existing facts, conditions, and values, highly questionable and improbable.

The possibility of loss is extremely high, but because of certain important and reasonably specific pending factors which may work to the advantage and strengthening of the asset, its classification as an estimated loss is deferred until its more exact status may be determined. Pending factors include proposed merger, acquisition, or liquidating procedures, capital injection, perfecting liens or additional collateral and refinancing plans.

*Risk Rating 9/Loss (OCC Definition)* These loans are classified as Loss and charged off because they are determined to be uncollectible and unbankable assets. This classification does not mean that the asset has absolutely no recovery or salvage value, but rather it is not practical or desirable to defer writing off this basically worthless asset even though partial recovery may be effected in the future. The bank should not be allowed to attempt long-term recoveries while the asset remains booked. Losses should be taken in the period in which they are determined to be uncollectible.

The following table presents weighted average risk grades and classified loans by class of commercial loan. Classified loans include loans in Risk Grades 6, 7 and 8.

December 31, 2010	Weighted Average Risk Grade	 assified Loans
Commercial and industrial	3.32	\$ 3,450
Factored receivables	2.76	
Real estate commercial mortgage	3.36	3,124
Real estate construction and land development	4.55	5,249
Loans to depository institutions	3.00	
Loans to nondepository institutions	3.06	 
Total	3.24	\$ 11,823

#### Allowance for Loan Losses

The allowance reflects management s best estimate of probable losses within the existing loan portfolio and of the risk inherent in various components of the loan portfolio. The allowance, in the judgment of management, is necessary to reserve for estimated loan losses and risk inherent in the loan portfolio. Additions to the allowance for loan losses are made by charges to the provision for loan losses. Credit exposures deemed to be uncollectible are charged against the allowance for loan losses. Recoveries of previously charged off amounts are credited to the allowance for loan losses.

The Company s allowance for loan loss methodology is based on guidance provided by the Interagency Policy Statement on the Allowance for Loan and Lease Losses issued by the Office of the Comptroller of the Currency, Board of Governors of the Federal Reserve system, the Federal Deposit Insurance Corporation, the National Credit Union Administration and the Office of Thrift Supervision in December 2006 and includes an allowance allocation calculated in accordance with U.S. GAAP guidance in FASB Codification Topic 310: *Receivables* and allowance allocations calculated in accordance with FASB Codification Topic 450: *Contingencies*. Accordingly, the methodology is based on historical loss experience by type of credit and internal risk grade, specific homogeneous risk pools and specific loss allocations, with adjustments for current events and conditions.

The level of the allowance for loan losses relies on a consistent process that requires multiple layers of management review and judgment and of industry concentrations, specific credit risks, loan loss experience, current loan portfolio quality, present economic, political and regulatory conditions and unidentified losses inherent in the current loan portfolio. Portions of the allowance may be allocated to specific credits; however, the entire allowance is available for any credit that, in management s judgment, should be charged off. While management utilizes its best judgment and information available, the ultimate adequacy of the allowance is dependent upon a variety of factors beyond the Company s control, including, among other things, the performance of the Company s loan portfolio, the economy, changes in interest rates and the view of the regulatory authorities toward loan classifications.

The Company s allowance for loan losses includes (1) specific valuation allowances for impaired loans evaluated in accordance with FASB Codification Topic 310: *Receivables*; (2) formulaic allowances based on historical loss experience by loan category, adjusted, as necessary, to reflect the impact of current conditions; and (3) unallocated general valuation allowances determined in accordance with FASB Codification Topic 450: *Contingencies* based on general economic conditions and other qualitative risk factors both internal and external to the Company.

The allowance established for losses on specific loans is based on a regular analysis and evaluation of problem loans. Loans are classified based on an internal credit risk grading process that evaluates, among other things: (i) the obligor s ability to repay; (ii) the underlying collateral, if any; and (iii) the economic environment and industry in which the borrower operates. This analysis is performed at the relationship manager level for all loans. When a loan has a calculated grade of 6 or higher, an analysis is performed to determine whether the loan is impaired and, if impaired, the need to specifically allocate a portion of the allowance for loan losses to the loan. Specific valuation allowances are determined by analyzing the borrower s ability to repay amounts owed, collateral deficiencies, the relative risk grade of the loan and economic conditions affecting the borrower s industry, among other things.

Historical valuation allowances are calculated based on the historical loss experience of specific types of loans and the internal risk grade of such loans at the time they were charged-off. The Company calculates historical loss ratios for pools of similar loans with similar characteristics based on the portion of actual charge-offs experienced to the total population of loans in the pool. The historical loss ratios are periodically updated based on actual charge-off experience. A historical valuation allowance is established for each pool of similar loans based upon the product of the historical loss ratio and the total dollar amount of the loans in the pool. During 2010 the Company revised its historical loss ratio calculation to reflect a five year history from a ten year history to reflect the current loss experience. The Company s pool of similar loans include similarly risk-graded groups of commercial and industrial loans, commercial real estate loans, residential real estate loans and consumer and other loans.

General valuation allowances are based on general economic conditions and other qualitative risk factors both internal and external to the Company. In general, such valuation allowances are determined by evaluating, among other things:

Estimated future losses in all significant loans Existence and effect of any concentrations of credit Existence and effect of any geographic concentration Other external factors such as competition, legal matters or regulation that may affect risk Effect of criticized and classified loans Effects from risk arising with international lending Effectiveness of internal problem loan identification and risk ratings Trends in portfolio volume, maturity and compositions of loans within segments Volumes and trends in delinquencies and nonaccrual loans Changes in the quality of lending policies and procedures Changes in local and national economic conditions Experience, ability and depth of lending staff

Changes in value of underlying collateral

Management evaluates the degree of risk that each one of these components has on the quality of the loan portfolio on a quarterly basis. Each component is determined based on degree of risk. The results are then input into a general allocation matrix to determine an appropriate general valuation allowance.

Included in the general valuation allowances are allocations for groups of similar loans with risk characteristics that exceed certain concentration limits established by management. Concentration risk limits have been established, among other things, for certain industry concentrations, large and highly leveraged credit relationships that exceed specified risk grades, and loans originated with policy exceptions that exceed specified risk grades.

Loans are generally charged-off at the earlier of when it is determined that collection efforts are no longer productive or when they have been identified as losses by management, internal loan review and/or bank examiners. Furthermore, equipment financing receivable and revolving

credit lines to small businesses are charged-off at the earlier of when payments are 120 days past due or when it is determined that collection efforts are no longer productive. Factors considered in determining whether collection efforts are no longer productive include any amounts currently being collected, the status of discussions or negotiations with the lessee/borrower, the principal and/or guarantors, the cost of continuing efforts to collect, the status of any foreclosure or other legal actions, the value of the collateral, and any other pertinent factors.

The following table presents the activity in the allowance for the periods shown:

Years Ended December 31,	2010		2009		2008	
Allowance for loan losses:						
Balance at beginning of year	\$ 19,8	72	\$	16,010	\$ 15,085

## NOTE 7.

## FEDERAL RESERVE AND FEDERAL HOME LOAN BANK STOCK

The bank is required to maintain a minimum level of investment in Federal Home Loan Bank of New York stock (FHLB) based on specific percentages of its outstanding mortgages, total assets or FHLB advances. FHLB and Federal Reserve Bank (FRB) stocks are restricted because they may only be sold to another member institution or the FHLB or FRB at their par values. Due to restrictive terms, and the lack of a readily determinable market value, FHLB and FRB stocks are carried at cost.

## NOTE 8.

The parent company has agreements with banks for back-up lines of credit for which it pays a fee at the annual rate of 1/4 of 1% times the line of credit extended. At December 31, 2010, these back-up bank lines of credit totaled \$19 million; no lines were used at any time during 2010, 2009

## NOTE 11.

## SECURITIES SOLD UNDER AGREEMENTS TO REPURCHASE

Securities sold under agreements to repurchase are secured by obligations of U.S. government corporations and government sponsored enterprises and corporate debt obligations with a carrying amount of \$31.6 million and \$24.8 million at December 31, 2010 and 2009, respectively.

Securities sold under agreements to repurchase are financing arrangements that mature within two years. At maturity, the securities underlying the agreements are returned to the Company. Information concerning securities sold under agreements to repurchase is summarized as follows:

Years Ended December 31,		2010	2009	2008
Securities sold under agreements to repurchase customers				
At December 31 Balance	\$	23,016 \$	21,048 \$	44,334

Total			\$ 144,173	\$ 130,000
Weighted-average interest rate			 2.42%	2.69%

Under the terms of a collateral agreement with the FHLB, advances are secured by stock in the FHLB and by certain qualifying assets (primarily mortgage-backed securities) having market values at least equal to 110% of the advances outstanding. After the initial call date, each callable advance is callable by the FHLB quarterly from the initial call date, at par.

In February 2002, the parent company completed its issuance of trust capital securities ( capital securities ) that raised \$25 million (\$24.1 million net proceeds after issuance costs). The 8.375% capital securities, due March 31, 2032, were issued by Sterling Bancorp Trust I (the trust ), a wholly-owned non-consolidated statutory business trust. The trust was formed with initial capitalization of common stock and for the exclusive purpose of issuing the capital securities. The trust used the proceeds from the issuance of the capital securities to acquire \$25.8 million junior subordinated debt securities that pay interest at 8.375% ( debt securities ) issued by the parent company. The Company is not considered the primary beneficiary of the trust (which is a VIE), therefore the trust is not consolidated in the Company s financial statements, but rather the subordinated debentures are shown as a liability. The debt securities are due concurrently with the capital securities which may not be redeemed, except under limited circumstances, until March 31, 2007, and thereafter at a price equal to their principal amount plus interest accrued to the date of redemption. The Company may also reduce outstanding capital securities through open market purchases. During 2010 and 2009, the parent company did not purchase any capital securities; during 2008, the parent company purchased in the open market \$817 thousand par amount of the capital securities at an aggregate cost of \$786 thousand. These securities are included in the Company securities available for sale. These securities are considered to be outstanding for the payment of dividends but are considered to be redeemed for the calculation of the regulatory capital ratios. During 2010, the Company s tax-qualified defined benefit pension plan (the Plan ) did not purchase any capital securities. During 2009, the Plan purchased in the open market \$652 thousand par amount of the capital securities at an aggregate cost of \$495 thousand. As a result of these repurchases, the amounts of capital securities held by third parties at December 31, 2010 and 2009 were \$22.8 million and \$22.8 million, respectively. Dividends and interest are paid quarterly.

The parent company has the right to defer payments of interest on the debt securities at any time or from time to time for a period of up to 20 consecutive quarterly periods with respect to each deferral period. Under the terms of the debt securities, in the event that under certain circumstances there is an event of default under the debt securities or the parent company has elected to defer interest on the debt securities, the parent company may not, with certain exceptions, declare or pay any dividends or distributions on its capital stock or purchase or acquire any of its capital stock.

Payments of distributions on the capital securities and payments on redemption of the capital securities are guaranteed by the parent company on a limited basis. The parent company also entered into an agreement as to expenses and liabilities pursuant to which it agreed, on a subordinated basis, to pay any costs, expenses or liabilities of the trust other than those arising under the capital securities. The obligations of the parent company under the debt securities, the related indenture, the trust agreement establishing the trust, the guarantee and the agreement as to expenses and liabilities, in the aggregate, constitute a full and unconditional guarantee by the parent company of the trust s obligations under the capital securities.

Notwithstanding that the accounts of the trust are not included in the Company s consolidated financial statements, the amount of capital securities issued by the trust and held by third parties is included in the Tier 1 capital of the parent company for regulatory capital purposes as allowed by the Federal Reserve Board. In March 2005, the Federal Reserve Board adopted a rule that would continue to allow the inclusion of capital securities issued by unconsolidated subsidiary trusts in Tier 1 capital, but with stricter quantitative limits. Under the final rule, after March 31, 2011, the aggregate amount of capital securities and certain other capital elements would be limited to 25% of Tier 1 capital, net of goodwill less any associated deferred tax liability. Based on the final rule, the parent company currently expects to continue to include the amount of capital securities in Tier 1 capital.

## **NOTE 13.**

## DUE TO FACTORED CLIENTS

Due to factored clients represents amounts due on accounts receivable purchased in excess of the amounts advanced.

## NOTE 14.

### PREFERRED STOCK

The parent company is authorized to issue up to 644,389 shares of preferred stock, \$5 par value, in one or more series. The following table presents information regarding the parent company s preferred stock issued and outstanding:

December 31,	2010	2009
Series A shares. Issued and outstanding 42,000 shares, at liquidation value	\$ 42,000	\$ 42,000

Under the provisions of the TARP Capital Purchase Program enacted under EESA, on December 23, 2008, the parent company sold to the U.S. Treasury 42,000 shares of the parent company s fixed rate cumulative perpetual preferred stock, Series A, par value \$5.00 per share, having a liquidation preference of \$1 thousand per share (the Series A Preferred Shares ), together with a warrant to purchase 516,817 shares of its common shares, for an aggregate price of \$42 million.

Under the standardized terms of the TARP Capital Purchase Program, cumulative dividends on the Series A Preferred Shares will accrue on the liquidation preference at a rate of 5% per annum for the first five years, and at a rate of 9% per annum thereafter, but will be paid only if, as and when declared by the parent company s Board of Directors. The Series A Preferred Shares have no maturity date and rank senior to the parent company s common shares with respect to the payment of dividends and distributions and amounts payable upon liquidation, dissolution and winding up of the parent company. The preferred shares currently qualify as Tier 1 capital for regulatory capital purposes.

As long as the Series A Preferred Shares remain outstanding, the parent company may declare and pay dividends on its common shares only if all accrued and unpaid dividends for all past dividend periods on the Series A Preferred Shares are fully paid. Prior to December 23, 2011, unless we have redeemed all such preferred shares or the U.S. Treasury has transferred all such preferred shares to a third party, the consent of the U.S. Treasury will be required for us to, among other things, increase the dividend on our common shares above the quarterly cash dividend of \$0.19 per share. The terms of the parent company s agreement with the U.S. Treasury allow for additional restrictions, including those on dividends, to be imposed by the U.S. Treasury, including unilateral amendments to comply with legislative changes.

The consent of the U.S. Treasury generally is also required for the parent company to make any stock repurchase (other than in connection with the administration of any employee benefit plan in the ordinary course of business and consistent with past practice) until December 23, 2011, unless all of the Series A Preferred Shares have been redeemed or transferred by the U.S. Treasury to unaffiliated third parties. Further, common shares, junior preferred shares or pari passu preferred shares may not be repurchased if the parent company is in arrears on the payment of dividends on Series A Preferred Shares.

The warrant has a 10-year term with 50% vesting immediately upon issuance and the remaining 50% vesting on January 1, 2010 if certain qualified equity offerings have not been conducted. As the Company did not conduct any qualified equity offering after the issuance of the Series A Preferred Shares, 100% of the warrant has been vested. The warrant has an exercise price, subject to anti-dilution adjustments, equal to \$12.19 per common share.

The parent company may redeem the Series A Preferred Shares three years after the date of the U.S. Treasury s investment, or earlier if it raises in an equity offering net proceeds equal to the amount of the Series A Preferred Shares to be redeemed. It must raise proceeds equal to at least 25% of the issue price of the Series A Preferred Shares to redeem any Series A Preferred Shares prior to the end of the third year. The redemption price is equal to the sum of the liquidation amount per share and any unpaid dividends on the Series A

Preferred Shares up to, but excluding, the date fixed for redemption. Notwithstanding the foregoing limitations, under the American Recovery and Reinvestment Act of 2009 the U.S. Treasury may, after consultation with the parent company s federal regulator, permit the parent company at any time to redeem the Series A Preferred Shares at liquidation value. Upon such redemption, the common stock purchase warrant may also be repurchased at its then current fair value.

The Series A Preferred Shares and the warrant issued under the TARP program qualify and are accounted for as permanent equity on the Company s Consolidated Balance Sheet. Of the \$42 million in total issuance proceeds, \$39.4 million and \$2.6 million were allocated to the Series A Preferred Shares and the warrant, respectively, based upon their estimated fair values as of December 23, 2008. The resulting discount of \$2.6 million recorded for the Series A Preferred Shares is being accreted by a charge to retained earnings over a five-year estimated life of the preferred shares based on the likelihood of their redemption by the parent company within that timeframe. Accretion of discount amounted to \$489 thousand in 2010, \$673 thousand in 2009 and \$55 thousand in 2008.

The proceeds from the issuance to the U.S. Treasury were allocated based on the relative fair value of the warrants as compared with the fair value of the preferred stock. The fair value of the warrants was determined using a valuation model which incorporates assumptions regarding our common stock price, dividend yield, expected life of the warrants, stock price volatility and the risk-free interest rate. The fair value of the preferred stock was determined based on assumptions regarding the discount rate (market rate) on the preferred stock, which was estimated to be approximately 13% at the date of issuance. The discount on the preferred stock will be accreted to liquidation value using a constant effective yield of 6.431% over a five-year term, which is the expected life of the preferred stock.

### **NOTE 15.**

## COMMON STOCK

The following table provides information regarding the number of common shares issued:

	Number of Shares Issued				
Years Ended December 31,	2010	2009			
Issued at beginning of year	22,226,425	22,202,419			
Shares issued public offering	8,625,000				
Shares issued under stock incentive plan	287,120	24,006			
Issued at end of year	31,138,545	22,226,425

## **NOTE 18.**

## **RESTRICTIONS ON THE BANK**

The parent company depends for its cash requirements on funds maintained or generated by its subsidiaries, principally the bank. Approval by the Comptroller of the Currency is required if the effect of dividends declared would cause the regulatory capital of the bank to fall below specified minimum levels. Additionally, all national banks are limited in the payment of dividends in any year without the approval of the Comptroller of the Currency to an amount not to exceed the net profits (as defined) for that year to date combined with its retained net profits for the preceding two calendar years. Under the foregoing restrictions, as of December 31, 2010 the bank could pay dividends of approximately \$32.3 million to the parent company, without regulatory approval.

Federal law also prohibits national banks from paying dividends that would be greater than the bank s undivided profits after deducting statutory bad debt in excess of the bank s allowance for loan losses. Under the Federal Deposit Insurance Corporation Improvement Act of 1991 (FDICIA), a depository institution, such as the bank, may not pay dividends if payment would cause it to become undercapitalized or it is already undercapitalized. The payment of dividends by the parent company and the bank may also be affected or limited by other factors, such as the requirement to maintain adequate capital.

#### **NOTE 19.**

## STOCK INCENTIVE PLAN

In April 1992, shareholders approved a Stock Incentive Plan ( the plan ) covering up to 100,000 common shares of the parent company. Under the plan, key employees of the parent company and its subsidiaries could be granted awards in the form of incentive stock options ( ISOs ), non-qualified stock options ( NQSOs ), stock appreciation rights ( SARs ), restricted stock or, a combination of these. The plan is administered by a committee of the Board of Directors. Since the inception of the plan, shareholders have approved amendments increasing the number of shares covered under the plan; the total number of shares authorized by shareholders through December 31, 2010 was 2,650,000. The plan provides for proportional adjustment to the number of shares covered by the plan and by outstanding awards, and in the exercise price of outstanding stock options, to reflect, among other things, stock splits and stock dividends. After giving effect to stock option and restricted stock awards granted and the effect of the 5% stock dividend effected December 12, 2005, the six-for-five stock split in the form of a stock dividend paid in December 2004, the five-for-four stock split in the form of a stock dividend effected September 10, 2003, the 20% stock dividend paid in December 2001 and December 2000, and the 5% stock dividend paid in December 1999, shares available for grant were 649,190, at December 31, 2010. The Company issues new shares to satisfy stock option exercises. The total intrinsic value of stock options exercised for the years ended December 31, 2010, 2009 and 2008 was \$171 thousand, \$61 thousand and \$4.4 million, respectively.

## Stock Options

The following tables present information on the qualified and non-qualified stock options outstanding (after the effect of the stock dividends/splits discussed above) as of December 31, 2010, 2009 and 2008 and changes during the years then ended:

	_	2010			2009				2008			
Qualified Stock Options	Number of Options			Number of OptionsWeighted-Average Exercise Price		Number of Options	Weighted-Average Exercise Price					
Outstanding at beginning of year	204,112	\$	12.46	231,898	\$	12.11	445,557	\$	10.87			
Exercised	(53,754)		6.94	(24,006)		8.69	(167,824)		9.42
