PART I

Item 1. BUSINESS

Raymond James Financial, Inc. (“RJF” or the “Company”) is a leading diversified financial services company headquartered in St. Petersburg, Florida providing private client, capital markets, asset management, banking and other services to individuals, corporations and municipalities predominantly in the United States of America (“U.S.”) and Canada. Its principal subsidiaries include Raymond James & Associates, Inc. (“RJ&A”), Raymond James Financial Services, Inc. (“RJFS”), Raymond James Financial Services Advisors, Inc. (“RJFSA”), Raymond James Ltd. (“RJ Ltd.”), Eagle Asset Management, Inc. (“Eagle”), and Raymond James Bank, N.A. (“RJ Bank”). All of these subsidiaries are wholly owned by RJF. RJF and its subsidiaries are hereinafter collectively referred to as “our,” “we” or “us.”

Established in 1962 and public since 1983, RJF has been listed on the New York Stock Exchange since 1986 under the symbol “RJF”. As a financial holding company, RJF is subject to the oversight and periodic examination of the Board of Governors of the Federal Reserve System (the “Fed”).

PRINCIPAL SUBSIDIARIES

Our principal subsidiary, RJ&A, with approximately 350 traditional branch and satellite offices throughout the U.S, is one of the largest brokerage firms in the country. RJ&A is a self-clearing broker-dealer engaged in most aspects of securities distribution, trading, investment banking and asset management. RJ&A also offers financial planning services for individuals and provides clearing services for RJFS, RJFSA, other affiliated entities and several unaffiliated broker-dealers. RJ&A is a member of the New York Stock Exchange Euronext (“NYSE”) and most regional exchanges in the U.S. It is also a member of the Financial Industry Regulatory Authority (“FINRA”) and the Securities Investors Protection Corporation (“SIPC”).

RJFS is one of the largest independent contractor brokerage firms in the U.S., is a member of FINRA and SIPC, but is not a member of any exchanges. Financial advisors affiliated with RJFS may offer their clients all products and services offered through RJ&A including investment advisory products and services which are offered through its affiliated registered investment advisor, RJFSA. Both RJFS and RJFSA clear all of their business on a fully disclosed basis through RJ&A.

RJ Ltd. is a Canadian broker-dealer subsidiary which engages in both retail and institutional distribution and investment banking. RJ Ltd. is a member of the Toronto Stock Exchange (“TSX”) and the Investment Industry Regulatory Organization of Canada (“IIROC”). Its U.S. broker-dealer subsidiary is a member of FINRA and SIPC.

Eagle is a registered investment advisor serving as the discretionary manager for individual and institutional equity and fixed income portfolios and our internally sponsored mutual funds.

RJ Bank originates and purchases commercial and industrial (“C&I”) loans, commercial and residential real estate loans, tax-exempt loans, as well as securities based loans (“SBL”), all of which are funded primarily by cash balances swept from the investment accounts of our broker-dealer subsidiaries’ clients.

REPORTABLE SEGMENTS

We currently operate through five reportable segments: “Private Client Group” or “PCG”; “Capital Markets”; “Asset Management”; RJ Bank and the “Other” segment.

PRIVATE CLIENT GROUP

We provide securities transaction and financial planning services to more than 2.5 million client accounts through the branch office systems of RJ&A, RJFS, RJFSA, RJ Ltd. and in the United Kingdom (“UK”) through Raymond James Investment Services Limited (“RJIS”). Our financial advisors offer a broad range of investments and services, including both third party and proprietary products, and a variety of financial planning services. We charge sales commissions or asset-based fees for investment services we provide to our Private Client Group clients based on established schedules. Varying discounts may be given, generally based upon the client’s level of business, the trade size, service level provided, and other relevant factors. In fiscal year 2014, the portion of securities commissions and fee revenues from this segment that we consider recurring include asset-based fees, trailing commissions from mutual funds and variable annuities/insurance products, mutual fund services fees, fees earned on funds in our multi-bank sweep program, and interest income, and represented approximately 72% of the Private Client Group’s total revenues.

3

Index

Revenues of this segment are correlated with total client assets under administration. As of September 30, 2014, client assets under administration of our Private Client Group amounted to approximately \$451 billion.

We offer investment advisory services under various financial advisor affiliation options. Fee revenues for such services are computed as either a percentage of the assets in the client account, or a flat periodic fee charged to the client for investment advice. RJ&A advisors operate under the RJ&A registered investment advisor (“RIA”) license while independent contractors affiliated with RJFS may operate either under their own RIA license, or the RIA license of RJFSA. The investment advisory fee revenues associated with these activities are recorded within securities commissions and fee revenues on our consolidated financial statements. Refer to the securities commissions and fees section of our summary of significant accounting policies in Note 2 of the Notes to Consolidated Financial Statements in this Form 10-K for our accounting policies on presenting these revenues in our consolidated financial statements.

The majority of our U.S. financial advisors are also licensed to sell insurance and annuity products through our general insurance agency, Raymond James Insurance Group, Inc. (“RJIG”). Through the financial advisors of our domestic broker-dealer subsidiaries, RJIG provides product and marketing support for a broad range of insurance products, principally fixed and variable annuities, life insurance, disability insurance and long-term care coverage.

Our U.S. financial advisors offer a number of professionally managed load mutual funds, as well as a selection of no-load mutual funds. RJ&A and RJFS maintain dealer sales agreements with most major distributors of mutual fund shares sold through broker-dealers.

Net interest revenue in the Private Client Group is generated by client balances, predominantly the earnings on margin loans and assets segregated pursuant to regulations, less interest paid on client cash balances (the “Client Interest Program”). We also utilize a multi-bank sweep program which generates fee revenue from unaffiliated banks in lieu of interest revenue. The cash sweep program, known as the Raymond James Bank Deposit Program (“RJBDP”), is a multi-bank (RJ Bank and several non-affiliated banks) program under which clients’ cash deposits in their brokerage accounts are re-deposited into interest-bearing deposit accounts (up to \$250,000 per bank for individual accounts and up to \$500,000 for joint accounts) at up to 12 banks. This program enables clients to obtain up to \$2.5 million in individual Federal Deposit Insurance Corporation (“FDIC”) deposit insurance coverage (\$5 million for joint accounts) while earning competitive rates for their cash balances. See Item 7, “Management’s Discussion and Analysis of Financial Condition and Results of Operations,” in this report for information regarding our net interest revenues.

Clients’ transactions in securities are affected on either a cash or margin basis. RJ&A and RJ Ltd. make margin loans to clients that are collateralized by the securities purchased or by other securities owned by the client. Interest is charged to clients on the amount borrowed. The interest rate charged to a client on a margin loan is based on current interest rates and on the outstanding amount of the loan.

Typically, broker-dealers utilize bank borrowings and equity capital as the primary sources of funds to finance clients’ margin account borrowings. RJ&A’s source of funds to finance clients’ margin account balances has been cash balances in brokerage clients’ accounts, which are funds awaiting investment. In addition, pursuant to written agreements with clients, broker-dealers are permitted by the Securities and Exchange Commission (“SEC”) and FINRA rules to lend client securities in margin accounts to other financial institutions. SEC regulations, however, restrict the use of clients’ funds derived from pledging and lending clients’ securities, as well as funds awaiting investment, to the financing of margin account balances; to the extent not so used, such funds are required to be deposited in a special segregated account for the benefit of clients. The regulations also require broker-dealers, within designated periods of time, to obtain possession or control of, and to segregate, clients’ fully paid and excess margin securities.

No single client accounts for a material percentage of this segment’s total business.

Raymond James & Associates

RJ&A is a full service broker-dealer that employs financial advisors throughout the U.S. RJ&A's financial advisors work in a traditional branch setting supported by local management and administrative staff. The number of financial advisors per office ranges from one to 43. RJ&A financial advisors are employees and their compensation includes commission payments, bonuses, and participation in the firm's benefit plans. Experienced financial advisors are hired from a wide variety of competitors. As a part of their agreement to join us we may make loans to financial advisors and to certain key revenue producers, primarily for recruiting and/or retention purposes. In addition, individuals are trained each year to become financial advisors at the Robert A. James National Training Center in St. Petersburg, Florida.

Index

Raymond James Financial Services

RJFS is a broker-dealer that supports independent contractor and bank-affiliated financial advisors in providing products and services to their Private Client Group clients throughout the U.S. The number of financial advisors in RJFS offices ranges from one to 42. Independent contractors are responsible for all of their direct costs and, accordingly, are paid a larger percentage of commissions and fees than employee advisors. They are permitted to conduct, on a limited basis, certain other approved businesses outside of their RJFS activities such as offering insurance products, independent registered investment advisory services and accounting and tax services, among others, with the approval of RJFS management.

The Financial Institutions Division (“FID”) is a subdivision of RJFS, which provides services to financial institutions such as banks, thrifts and credit unions, and their clients. RJFS also provides custodial, trading, research and other back office support and services (including access to clients’ account information and the services of the Asset Management segment) to unaffiliated independent registered investment advisors through its Investment Advisor Division (“IAD”).

Raymond James Financial Services Advisors

RJFSA is a registered investment advisor that exclusively supports the investment advisory activities of the RJFS financial advisors.

Raymond James Ltd.

RJ Ltd. is a wholly owned self-clearing broker-dealer subsidiary headquartered in Canada with its own operations and information processing personnel. Financial advisors can affiliate with RJ Ltd. either as employees or independent contractors.

Raymond James Investment Services Limited

RJIS is a wholly owned broker-dealer that operates an independent contractor financial advisor network in the United Kingdom. RJIS also provides custodial and execution services to independent investment advisory firms.

Securities Lending

RJ&A conducts its securities lending business through the borrowing and lending of securities from and to other broker-dealers, financial institutions and other counterparties. Generally, we conduct these activities as an intermediary (referred to as “Matched Book”). However, RJ&A will also loan client marginable securities held in a margin account containing a debit (referred to as lending from the “Box”) to counterparties. The borrower of the securities puts up a cash deposit on which interest is earned. The lender in turn receives cash and pays interest. These cash deposits are adjusted daily to reflect changes in the current market value of the underlying securities. Additionally, securities are borrowed from other broker-dealers (referred to as borrowing for the “Box”) to facilitate RJ&A’s clearance and settlement obligations. The net revenues of this securities lending business are the interest spreads generated.

Operations and Information Technology

RJ&A operations personnel are responsible for the processing of securities transactions, custody of client securities, support of client accounts, receipt, identification and delivery of funds and securities, and compliance with certain regulatory and legal requirements for most of our U.S. securities brokerage operations through locations in Saint

Petersburg, Florida, Denver, Colorado, Memphis, Tennessee and Southfield, Michigan. RJ Ltd. operations personnel have similar responsibilities at our Canadian brokerage operations located in Vancouver, British Columbia.

The information technology department develops and supports the integrated solutions that provide a differentiated platform for our business. This platform is designed to allow our advisors to spend more time with their clients and enhance and grow their business.

In the area of information security, we have developed and implemented a framework of principles, policies and technology to protect both our own information assets as well as those we have pertaining to our clients. Safeguards are applied to maintain the confidentiality, integrity and availability of information resources.

Our business continuity program has been developed to provide reasonable assurance of business continuity in the event of disruptions at our critical facilities. Business departments have developed operational plans for such disruptions, and we have a staff which devotes their full time to monitoring and facilitating those plans. Our business continuity plan continues to be enhanced

Index

and tested to allow for continuous business processing in the event of weather-related or other interruptions of operations at our corporate office locations or one of our operations processing or data center sites.

We have also developed a business continuity plan for our PCG retail branches in the event these branches are impacted by severe weather. RJ&A PCG offices utilize an integrated telephone system to route clients to a centralized support center that services clients directly in the event of a branch office closure.

CAPITAL MARKETS

Capital Markets activities consist primarily of equity and fixed income products and services. No single client accounts for a material percentage of this segment's total business.

Institutional Sales

Institutional sales commissions account for a significant portion of this segment's revenue, which is fueled by a combination of general market activity and the Capital Markets group's ability to identify and promote attractive investment opportunities. Our institutional clients are serviced by institutional equity departments of RJ&A and RJ Ltd.; the RJ&A fixed income department; RJ&A's European offices; Raymond James Financial International, Ltd., ("RJFI") an institutional UK broker-dealer headquartered in London, England; and Raymond James European Securities, Inc., ("RJES") headquartered in Paris, France. We charge commissions on equity transactions based on trade size and the amount of business conducted annually with each institution. Fixed income commissions are based on trade size and the characteristics of the specific security involved.

More than 115 domestic and overseas professionals located in offices in the U.S. and Europe comprise RJ&A's institutional equity sales and sales trading departments and maintain relationships with nearly 1,430 institutional clients. Some European and U.S. offices also provide services to high net worth clients. RJ Ltd. has over 30 institutional equity sales and trading professionals servicing predominantly Canadian, U.S. and European institutional investors from offices in Canada.

From offices in various locations within the U.S., RJ&A distributes to institutional clients both taxable and tax-exempt fixed income products, primarily municipal, corporate, government agency and mortgage-backed bonds. RJ&A carries inventory positions of taxable and tax-exempt securities to facilitate institutional sales activities.

Trading

RJ&A, and to a much lesser extent RJ Ltd. and RJFI, each trade both taxable and tax-exempt fixed income securities primarily for the purpose of facilitating sales to clients. The taxable and tax-exempt fixed income traders purchase and sell corporate, municipal, government, government agency, and mortgage-backed bonds, asset-backed securities, preferred stock, and certificates of deposit from and to our clients or other dealers. RJ&A enters into future commitments such as forward contracts and "to be announced" securities (e.g., securities having a stated coupon and original term to maturity, although the issuer and/or the specific pool of mortgage loans is not known at the time of the transaction). Relatively small amounts of proprietary trading positions are also periodically taken by RJ&A or RJ Ltd. for various purposes and are closely monitored within well-defined limits.

RJ&A, through its fixed income public finance operations, enters into forward commitments to purchase Government National Mortgage Association ("GNMA"), or Federal National Mortgage Association ("FNMA"), mortgage back securities ("MBS"). The MBS securities are issued on behalf of various state and local housing finance agencies ("HFA") clients and consist of the mortgages originated through their lending programs. RJ&A's forward GNMA or FNMA MBS purchase commitments arise at the time of the loan reservation for a borrower in the HFA lending program

(these loan reservations fix the terms of the mortgage, including the interest rate and maximum principal amount). The underlying terms of the GNMA or FNMA MBS purchase, including the price for the MBS security (which is dependent upon the interest rates associated with the underlying mortgages) are also fixed at loan reservation. Upon acquisition of the MBS security, RJ&A typically sells such security in open market transactions as part of its fixed income operations.

RJ Capital Services, Inc. ("RJCS"), a subsidiary of RJF, participates in the interest rate swaps market as a principal, either to economically hedge RJ&A fixed income inventory, for transactions with clients, or to a limited extent for its own account. RJCS also purchases pools of interest-only SBA loan strips ("I/O Strips") that result from RJ Bank's SBA loan purchase and securitization process, and sells these I/O Strips as part of our fixed income operations.

Trading equity securities involves the purchase and sale of securities from and to our clients or other dealers. Trading profits and losses are derived from the spreads between bid and asked prices, as well as the change in market prices for the individual securities during the period we hold them. Similar to the equity research department described in the following section, this

Index

operation serves to support both our institutional equity capital markets and Private Client Group sales efforts. RJ&A also offers an options trading platform that is operated primarily on an agency basis. The RJ Ltd. trading desks not only support client activity, but also take proprietary positions that are closely monitored within well-defined limits. RJ Ltd. also provides specialist services in approximately 160 TSX listed common stocks.

Equity Research

The more than 50 analysts in RJ&A's domestic research department support our institutional and retail sales efforts and publish research on more than 1,000 companies. This research primarily focuses on U.S. and Canadian companies in specific industries including consumer, energy, financial services, healthcare, industrial, mining and natural resources, real estate, technology, and communication and transportation. Proprietary industry studies and company-specific research reports are made available to both institutional and individual clients. RJ Ltd. has 16 analysts who publish research on approximately 230 primarily Canadian companies focused in the energy, energy services, mining, forest products, agricultural, technology, clean technology, consumer and industrial products, and real estate sectors. Additionally, we provide coverage of a limited number of European companies through RJES, as well as Latin American companies through a joint venture in which we hold an interest.

Investment Banking

The more than 150 professionals of RJ&A's equity capital markets investment banking group reside in various locations within the U.S. and are involved in a variety of activities including public and private equity financing for corporate clients, and merger and acquisition advisory services. RJ Ltd.'s investment banking group consists of approximately 30 professionals who reside in various locations within Canada and provide equity financing and financial advisory services to corporate clients. Our investment banking activities provide a comprehensive range of strategic and financial advisory services tailored to our clients' business life cycles and backed by our strategic industry focus.

RJ&A's fixed income investment banking services include public finance and debt underwriting activities. More than 180 professionals in the RJ&A public finance group operate out of various offices located throughout the U.S., and serve as a financial advisor, placement agent or underwriter to various issuers who include municipal agencies (including political subdivisions), housing developers and non-profit health care institutions.

RJ&A acts as a consultant, underwriter or selling group member for corporate bonds, MBS, whole loans, agency bonds, preferred stock and unit investment trusts. When underwriting new issue securities, RJ&A agrees to purchase the issue through a negotiated sale or submits a competitive bid.

Raymond James Financial Products, Inc. or Morgan Keegan Capital Services, LLC, both being non-broker-dealer subsidiaries (collectively referred to as the Raymond James matched book swap subsidiaries or "RJSS"), enter into derivative transactions, including interest rate swaps, options, and combinations of those instruments, primarily with government entities and not-for-profit counterparties. For every derivative transaction RJSS enters into with a client, RJSS enters into an offsetting derivative transaction with a credit support provider who is a third party financial institution. Thus, we refer to RJSS's operations as our "matched book" derivatives business.

Syndicate

The syndicate department consists of professionals who coordinate the marketing, distribution, pricing and stabilization of lead and co-managed equity underwritings. In addition to lead and co-managed offerings, this department coordinates the firm's syndicate and selling group activities in transactions managed by other investment banking firms.

Raymond James Tax Credit Funds, Inc.

Raymond James Tax Credit Funds, Inc. ("RJTCF") is the general partner or managing member in a number of limited partnerships and limited liability companies. These partnerships and limited liability companies invest in real estate project entities that qualify for tax credits under Section 42 of the Internal Revenue Code. RJTCF has been an active participant in the tax credit program since its inception in 1986 and currently focuses on tax credit funds for institutional investors that invest in a portfolio of tax credit-eligible multi-family apartments. The investors' expected returns on their investments in these funds are primarily derived from tax credits and tax losses that investors can use to reduce their federal tax liability. During fiscal year 2014, RJTCF invested nearly \$665 million for large institutional investors in more than 80 real estate transactions for properties located throughout the U.S. Since inception, RJTCF has sold, inclusive of unfunded commitments, over \$5.4 billion of tax credit fund partnership interests and has sponsored nearly 100 tax credit funds, with investments in over 1,650 tax credit apartment properties in nearly all 50 states and one U.S. Territory.

Index

Emerging Markets

Raymond James International Holdings, Inc. (“RJIH”), through its subsidiaries, currently has interests in operations in Latin American countries including Argentina and Uruguay. Through these entities we operate securities brokerage, investment banking, asset management and equity research businesses.

ASSET MANAGEMENT

Our Asset Management segment includes the operations of Eagle, the Eagle Family of Funds (“Eagle Funds”), the asset management operations of RJ&A (“AMS”), Raymond James Trust, National Association (“RJ Trust”), a wholly owned subsidiary of RJF, and other fee-based programs. Revenues for this segment are primarily generated by the investment advisory fees related to asset management services provided for individual and institutional investment portfolios, along with mutual funds. Investment advisory fees are earned on assets held in managed or non-discretionary asset-based programs. These fees are computed based on balances either at the beginning of the quarter, the end of the quarter, or average daily assets. Consistent with industry practice, fees from private client investment portfolios are typically based on asset values at the beginning of the period while institutional fees are typically based on asset values at the end of the period. Asset balances are impacted by both the performance of the market and sales and redemptions of client accounts/funds. Rising markets have historically had a positive impact on investment advisory fee revenues as existing accounts increase in value, and individuals and institutions may commit incremental funds in rising markets. No single client accounts for a material percentage of this segment’s total business.

Eagle Asset Management, Inc.

Eagle is a registered investment advisor that offers a variety of equity and fixed income objectives managed by a number of portfolio management teams and subsidiary investment advisors, including Eagle Boston Investment Management, Inc. (“EBIM”) and ClariVest Asset Management, LLC (“ClariVest”). Eagle and its subsidiaries have approximately \$28.8 billion in assets under management and approximately \$2.4 billion in assets under advisement (non-discretionary advised assets) as of September 30, 2014. Eagle’s clients include institutions, corporations, pension and profit sharing plans, foundations, endowments, issuers of variable annuities, individuals and mutual funds. Eagle also serves as investment advisor to the Eagle Funds. Most clients are charged fees based upon asset levels including fees on non-discretionary assets for providing Eagle account models to professional advisors at other firms, however in some cases performance fees may be earned for outperforming respective benchmarks.

Eagle Fund Distributors, Inc. (“EFD”), a wholly owned subsidiary of Eagle, is a registered broker-dealer engaged in the distribution of the Eagle Funds.

The Small Cap Growth Fund, Mid Cap Growth Fund, Growth and Income Fund, Small Cap Stock Fund, Mid Cap Stock Fund, and Investment Grade Bond Fund are managed by Eagle. The Capital Appreciation Fund and International Stock Fund utilize ClariVest as a sub-advisor, and the Eagle Smaller Company Fund is managed by EBIM.

Eagle class shares of both a taxable and a tax-exempt money market fund are available to clients of Eagle Funds through an unrelated third party.

AMS

AMS provides a range of offerings to our PCG clients including: managing several investment advisory programs which maintain an approved list of investment managers, provide asset allocation model portfolios, establish custodial

facilities, monitor the performance of client accounts, provide clients with accounting and other administrative services, and assist investment managers with certain trading management activities. One of AMS' programs, "Raymond James Consulting Services" is a managed program in which Raymond James Consulting Services serves as a conduit for AMS clients to access a number of independent investment managers, in addition to Eagle, with initial investment amounts that are below normal program minimums, as well as providing monitoring and due diligence services. AMS earns fees on asset balances, a portion of which are paid to predominately independent investment managers and Eagle and affiliates who direct the investments within clients' accounts. In addition, AMS offers additional accounts managed within fee based asset allocation platforms under our program known as Freedom, and other managed programs. Freedom's investment committee manages portfolios of mutual funds, exchange traded funds and separately managed account models on a discretionary basis. For separately managed account models a portion of the fees earned may be paid to the investment managers who provide the models. At September 30, 2014, these managed programs had approximately \$40.6 billion in assets under management, including approximately \$4.8 billion managed by Eagle and affiliates.

Index

AMS also provides certain services for their non-discretionary asset-based programs (known as Passport, Ambassador or other non-discretionary asset-based programs). AMS provides performance reporting, research, sales, accounting, trading and other administrative services. Advisory services are provided by PCG financial advisors. Client fees are based on the individual account or relationship size and may also be dependent on the type of securities in the accounts. The revenues are predominantly included in securities commissions and fees revenue in the PCG segment, with a lesser share of revenue generated from these activities included in investment advisory fee revenue in this Asset Management segment. As of September 30, 2014, these programs had approximately \$78.9 billion in assets. RJFS and RJFSA offer a similar fee-based program known as IMPAC (“IMPAC”). All revenues for IMPAC are reported in the PCG segment. As of September 30, 2014, IMPAC had approximately \$12.8 billion in assets serviced by RJFS financial advisors and RJFSA registered investment advisors (see the Private Client Group segment discussion in this Item 1 for additional information).

In addition to the foregoing programs, AMS also administers managed fee-based programs for clients who have contracted for portfolio management services from non-affiliated investment advisors that are not part of the Raymond James Consulting Services program.

Raymond James Trust, National Association

RJ Trust is a nationally chartered trust company regulated by the Office of the Comptroller of the Currency (“OCC”), that has been serving the clients of our financial advisors since 1991. With nearly 90 trust associates and six offices across the U.S., RJ Trust administers approximately \$3.4 billion in personal and charitable trust assets as of September 30, 2014, which includes \$247 million in the Raymond James Charitable Endowment Fund. The Raymond James Charitable Endowment Fund is a certified 501(c)(3) public charity where RJ Trust serves as trustee. In addition to acting as a sole-trustee or co-trustee, under its federal charter RJ Trust may also act as custodian, personal representative or agent for trustee in a wide variety of trust and estate situations in all 50 states. RJ Trust also serves as trustee in living trusts, charitable trusts, life insurance trusts, specialty trusts, Individual Retirement Account (“IRA”) rollover trusts and others.

RJ BANK

RJ Bank is a national bank regulated by the OCC that provides corporate, SBL and residential loans, as well as FDIC insured deposit accounts, to clients of our broker-dealer subsidiaries and to the general public. RJ Bank is active in corporate loan syndications and participations. RJ Bank generates net interest revenue principally through the interest income earned on loans and investments, which is offset by the interest expense it pays on client deposits and on its borrowings. See Item 7, “Management’s Discussion and Analysis of Financial Condition and Results of Operations,” in this report for financial information regarding RJ Bank’s net interest earnings.

RJ Bank operates from a single branch location adjacent to RJF’s corporate office complex in St. Petersburg, Florida. Access to RJ Bank’s products and services is available nationwide through the offices of our affiliated broker-dealers as well as through electronic banking services. RJ Bank’s assets include C&I loans, commercial and residential real estate loans, tax-exempt loans, as well as loans fully collateralized by marketable securities. Corporate loans represent approximately 75% of RJ Bank’s loan portfolio of which 95% are U.S. and Canadian syndicated loans. Residential mortgage loans are originated and held for investment or sold in the secondary market. RJ Bank’s liabilities primarily consist of deposits that are cash balances swept from the investment accounts maintained at RJ&A.

RJ Bank does not have any significant concentrations with any one industry or customer (see table of industry concentration in Item 7A, “Credit Risk” in this report).

OTHER

This segment includes our principal capital and private equity activities as well as various corporate overhead costs of RJF including the interest cost on our public debt, and the acquisition and integration costs associated with our acquisitions including, most significantly in fiscal years 2013 and 2012, Morgan Keegan (as hereinafter defined below, see Note 3 of the Notes to Consolidated Financial Statements in this Form 10-K for additional information regarding this acquisition).

Our principal capital and private equity activities include various direct and third party private equity and merchant banking investments; employee investment funds (the "Employee Funds"); and various private equity funds which we sponsor.

9

Index

We participate in profits or losses from various investments through both general and limited partnership interests. Additionally, we realize profits or incur losses as a result of direct merchant banking investments. The Employee Funds are limited partnerships, some of which we are the general partner, that invest in our merchant banking and private equity activities and other unaffiliated venture capital limited partnerships. The Employee Funds were established as compensation and retention vehicles for certain of our qualified key employees. As of September 30, 2014, certain of our merchant banking investments include investments in a manufacturer of crime investigation and forensic supplies, an event photography business, and a company pursuing a new concept in the salon services market.

On April 2, 2012 (the “Closing Date”), RJF completed its acquisition of all of the issued and outstanding shares of Morgan Keegan & Company, Inc. (“MK & Co.”), and MK Holding, Inc. and certain of its affiliates (collectively referred to hereinafter as “Morgan Keegan”) from Regions Financial Corporation (“Regions”). In mid-February 2013, we completed the transfer of all of the active businesses of MK & Co. to RJ&A. At the time of its acquisition, MK & Co. was a clearing broker-dealer, headquartered in Memphis, Tennessee. After the transfers of its businesses to RJ&A and effective September 2013, MK & Co. became a special purpose broker-dealer. In July 2013, MK & Co. formally changed its legal form from a corporation to a limited liability company, and is now known as Morgan Keegan & Company, LLC. MK & Co. has had no operations throughout fiscal year 2014.

COMPETITION

We are engaged in intensely competitive businesses. We compete with many larger, better capitalized providers of financial services, including other securities firms, most of which are affiliated with major financial services companies, insurance companies, banking institutions and other organizations. We also compete with a number of firms offering on-line financial services and discount brokerage services, usually with lower levels of service, to individual clients. We compete principally on the basis of the quality of our associates, service, product selection, location and reputation in local markets.

In the financial services industry, there is significant competition for qualified associates. Our ability to compete effectively in these businesses is substantially dependent on our continuing ability to attract, retain and motivate qualified associates, including successful financial advisors, investment bankers, trading professionals, portfolio managers and other revenue producing or specialized personnel.

REGULATION

The following discussion sets forth some of the material elements of the regulatory framework applicable to the financial services industry and provides some specific information relevant to us. The regulatory framework is intended primarily for the protection of our clients, customers, the securities markets, our depositors and the Federal Deposit Insurance Fund and not for the protection of our creditors or shareholders. Under certain circumstances, these rules may limit our ability to make capital withdrawals from RJ Bank or our broker-dealer subsidiaries.

To the extent that the following information describes statutory and regulatory provisions, it is qualified in its entirety by reference to the particular statutory and regulatory provisions. A change in applicable statutes, regulations or regulatory policy may have a material effect on our business.

The financial services industry in the U.S. is subject to extensive regulation under federal and state laws.

New rules and regulations resulting from the Dodd-Frank Act

In July 2010, the U. S. government enacted financial services reform legislation known as the Dodd-Frank Wall Street Reform & Consumer Protection Act (“Dodd-Frank Act”). The Dodd-Frank Act enacted sweeping changes in the supervision and regulation of the financial industry designed to provide for greater oversight of financial industry participants, reduce risk in banking practices and in securities and derivatives trading, enhance public company corporate governance practices and executive compensation disclosures, and provide greater protections to individual consumers and investors. Certain elements of the Dodd-Frank Act became effective immediately; however the details of some provisions remain subject to implementing regulations that are yet to be adopted by various applicable regulatory agencies. Furthermore, many provisions of the Dodd-Frank Act are still subject to further rule making procedures and studies and will take effect over several years.

The Dodd-Frank Act instructs U.S. federal banking and other regulatory agencies to conduct hundreds of rule-makings, studies and reports. These regulatory agencies include the Commodity Futures Trading Commission; the SEC; the Fed; the OCC; the FDIC; the Consumer Financial Protection Bureau (the “CFPB”); and the Financial Stability Oversight Council (the “FSOC”). As

Index

a result of Dodd-Frank Act rule-making and other regulatory reforms, we are currently experiencing a period of unprecedented change in regulation and these changes could have a significant impact on how we conduct certain aspects of our business. Given the current status of the regulatory developments, we cannot currently quantify the possible effects on our business and operations of all of the significant changes that are currently underway (see Item 1A, "Risk Factors," within this report for further discussion of the potential future impact on our operations). Certain of the changes enacted under the Dodd-Frank Act thus far, include the following:

Since RJ Bank provides deposits covered by FDIC insurance, generally up to \$250,000 per account ownership type, RJ Bank is subject to the Federal Deposit Insurance Act. In February 2011, under the provisions of the Dodd-Frank Act, the FDIC issued a final rule changing its assessment base in addition to other minor adjustments. For banks with more than \$10 billion in assets, the FDIC's new rule changed the assessment rate calculation, which relies on a scorecard designed to measure financial performance and ability to withstand stress in addition to measuring the FDIC's exposure should the bank fail. This new rule became effective for RJ Bank beginning with the December 2013 assessment period.

In July 2011, pursuant to the Dodd-Frank Act, the CFPB began operations and was given rulemaking authority for a wide range of consumer protection laws that would apply to all banks and provide broad powers to supervise and enforce federal consumer protection laws. The CFPB has supervisory and enforcement powers under such laws as the Equal Credit Opportunity Act, the Truth in Lending Act, Real Estate Settlement Procedures Act, Fair Credit Reporting Act, Fair Debt Collection Act, the Consumer Financial Privacy provisions of the Gramm-Leach-Bliley Act and certain other statutes. At the beginning of fiscal year 2014, the CFPB assumed regulatory authority over RJ Bank for its compliance with various federal consumer protection laws. The CFPB has proposed and finalized many rules since its establishment; the majority of those became effective in early fiscal year 2014. The CFPB has authority to promulgate regulations and issue orders, policy statements, conduct examinations, and bring enforcement actions. The creation of the CFPB has led to enhanced enforcement of consumer protection laws. The ultimate impact of this heightened scrutiny is uncertain but could result in changes to pricing, practices, products and procedures. It could also result in increased costs related to regulatory oversight, supervision and examination, remediation efforts and possible penalties.

In October 2012, under the provisions of the Dodd-Frank Act, regulators issued final rules requiring banking organizations with total assets of more than \$10 billion but less than \$50 billion to conduct annual company-prepared stress tests, report the results to their primary regulator and the Fed and publish a summary of the results. Under the rules, stress tests must be conducted using certain scenarios (baseline, adverse, and severely adverse), which the Fed provides each year. These new rules required RJF to conduct its first stress test by March 31, 2014. We submitted our initial stress testing results, utilizing data as of September 30, 2013, to the Federal Reserve Board ("FRB") on March 31, 2014. In addition, RJF will be required to begin publicly disclosing a summary of certain stress test results no later than June 30, 2015 for the stress test cycle beginning on October 1, 2014.

¶The Volcker Rule:

Under the provisions of the Dodd-Frank Act, Congress adopted a ban on proprietary trading and restricted investment in hedge funds and private equity funds by commercial banks and their affiliates (the "Regulated Entities"), the so-called "Volcker Rule." In December 2013, the CFTC, the OCC, the Fed, the FDIC, and the SEC adopted a final version of the Volcker Rule. We continue to review the details contained in the final Volcker Rule to assess its impact on our operations. Based upon our latest analysis and understandings of these regulations, we do not anticipate that it will have a material impact on our results of operations.

The final Volcker Rule prohibits Regulated Entities from engaging in "proprietary trading" and imposes limitations on the extent to which Regulated Entities are permitted to invest in certain "covered funds" (i.e. hedge funds and private

equity funds) and requires that such investments be fully deducted from Tier 1 Capital. It limits a Regulated Entity's aggregate ownership in hedge funds and private equity funds to three percent of Tier I capital, although the impact of such limit to RJF's investment portfolio is subject to further analysis. Additionally, Regulated Entities are prohibited from owning three percent or more of any single fund. Congress provided an exemption for certain permitted activities of Regulated Entities, such as underwriting, market making, hedging, and risk management.

The final Volcker Rules became effective as of April 1, 2014 and conformance is required by July 21, 2015. However, the conformance period may be subject to two additional one-year extensions by the Fed. Furthermore, Regulated Entities can apply for an additional five-year extension for certain qualifying investments. We currently maintain investments in selected private equity and merchant banking entities, some of which may meet the definition of "covered funds" and therefore be subject to certain limitations. The amount of future investments of this nature that we may make may be

Index

limited in order to maintain compliance levels specified by the regulation. Further, subsequent interpretations of what constitutes “covered funds” under the final Volcker Rule may adversely impact our operations.

In July 2013, the OCC, the FRB, and the FDIC released final United States Basel III regulatory capital rules implementing the global regulatory capital reforms of Basel III and certain changes required by the Dodd-Frank Act. The rule increases the quantity and quality of regulatory capital, establishes a capital conservation buffer, and makes selected changes to the calculation of risk-weighted assets. The rule becomes effective for us on January 1, 2015, subject to a transition period for several aspects of the rule, including the new minimum capital ratio requirements, the capital conservation buffer, and the regulatory capital adjustments and deductions. We are currently evaluating the impact of these rules on both RJF and RJ Bank; however, based on our current analyses, we believe that RJF and RJ Bank would meet all capital adequacy requirements under the final rules. However, the increased capital requirements could restrict our ability to grow during favorable market conditions or require us to raise additional capital. As a result, our business, results of operations, financial condition or prospects could be adversely affected. See Item 1A, “Risk Factors,” within this report for more information.

In July 2014, the SEC adopted amendments to the rules that govern money market mutual funds. The amendments make structural and operational reforms to address risks of excessive withdrawals over relatively short time frames by investors from money market funds, while preserving the benefits of the funds. We do not sponsor any money market funds. We utilize such funds to a small extent for our own investment purposes, and offer to our clients money market funds that are sponsored by third parties as one of several cash sweep alternatives.

Effective July 1, 2014, certain final rules issued by the SEC regarding the mandatory registration of municipal advisors became effective. These rules specify which activities will be covered by the Dodd-Frank Act imposed fiduciary duty of a municipal advisor to its government client, may result in the need for new written representations by issuers, and may limit the manner in which we, in our capacity as an underwriter or in our other professional roles, interact with municipal issuers. We registered as a municipal advisor and by virtue of such registration are now subject to additional regulation and oversight in respect of our municipal finance business. The SEC recently announced that it will undertake a two-year review of municipal advisors. Additionally, forthcoming rulemaking by the Municipal Securities Rulemaking Board may cause further changes to the manner in which state and local government are able to interact with the outside finance professionals. Although these new rules impact the nature of our interactions with public finance clients, and may have a negative short-term impact on the volume of public finance financing transactions while the industry adapts to the new rules, we do not expect these new rules to have a materially adverse impact on our public finance results of operations (which are included in our Capital Markets segment).

Other regulations applicable to our operations

The SEC is the federal agency charged with administration of the federal securities laws. Financial services firms are also subject to regulation by state securities commissions in those states in which they conduct business. RJ&A and RJFS are currently registered as broker-dealers in all 50 states. The SEC recently adopted amendments, most of which were effective October 2013, to its financial responsibility rules, including changes to the net capital rule, the customer protection rule, the record-keeping rules and the notification rules applicable to our broker-dealer subsidiaries. We are currently evaluating the impact of these amendments on our broker-dealer subsidiaries; however, based on our current analyses, we do not believe they will have a material adverse effect on any of our broker-dealer subsidiaries. Pursuant to the Dodd-Frank Act, the SEC was charged with considering whether broker-dealers should be subject to a standard of care similar to the fiduciary standard applicable to registered investment advisors. It is not clear whether the SEC will determine that a heightened standard of conduct should be applicable to broker-dealers. Financial services firms are subject to regulation by various foreign governments, securities exchanges, central banks and regulatory bodies, particularly in those countries where they have established offices. We have offices in Europe,

Canada and Latin America.

Much of the regulation of broker-dealers in the U.S. and Canada, however, has been delegated to self-regulatory organizations (“SROs”), principally FINRA, the IIROC and securities exchanges. These SROs adopt and amend rules (which are subject to approval by government agencies) for regulating the industry and conduct periodic examinations of member broker-dealers.

The SEC, SROs and state securities commissions may conduct administrative proceedings that can result in censure, fine, suspension or expulsion of a broker-dealer, its officers or employees. Such administrative proceedings, whether or not resulting in adverse findings, can require substantial expenditures and can have an adverse impact on the reputation of a broker-dealer.

Our U.S. broker-dealer subsidiaries are required by federal law to be members of SIPC. The SIPC fund provides protection for cash and securities held in client accounts up to \$500,000 per client, with a limitation of \$250,000 on claims for cash balances. We have purchased excess SIPC coverage through various syndicates of Lloyd’s, a London-based firm that holds an “A+” rating

12

Index

from Standard and Poor's and Fitch Ratings. Excess SIPC is fully protected by the Lloyd's trust funds and Lloyd's Central Fund ("Excess SIPC Insurer"). For RJ&A, the additional protection currently provided has an aggregate firm limit of \$750 million for cash and securities, including a sub-limit of \$1.9 million per client for cash above basic SIPC. Account protection applies when a SIPC member fails financially and is unable to meet obligations to clients. This coverage does not protect against market fluctuations. RJF has provided an indemnity to the Excess SIPC Insurer against any and all losses they may incur associated with the excess SIPC policies.

RJ Ltd. is currently registered in all provinces and territories in Canada. The financial services industry in Canada is subject to comprehensive regulation under both federal and provincial laws. Securities commissions have been established in all provinces and territorial jurisdictions which are charged with the administration of securities laws. Investment dealers in Canada are also subject to regulation by SROs, which are responsible for the enforcement of, and conformity with, securities legislation for their members and have been granted the powers to prescribe their own rules of conduct and financial requirements of members. RJ Ltd. is regulated by the securities commissions in the jurisdictions of registration as well as by the SROs and the IIROC.

RJ Ltd. is required by the IIROC to belong to the Canadian Investors Protection Fund ("CIPF"), whose primary role is investor protection. The CIPF Board of Directors determines the fund size required to meet its coverage obligations and sets a quarterly assessment rate. Dealer members are assessed the lesser of 1.0% of revenue or a risk-based assessment. The CIPF provides protection for securities and cash held in client accounts up to \$1 million Canadian currency ("CDN") per client with separate coverage of CDN \$1 million for certain types of accounts. This coverage does not protect against market fluctuations.

See Note 26 of the Notes to Consolidated Financial Statements in this Form 10-K for further information on SEC, FINRA and IIROC regulations pertaining to broker-dealer regulatory minimum net capital requirements.

Our investment advisory operations, including the mutual funds that we sponsor, are also subject to extensive regulation. Our U.S. asset managers are registered as investment advisors with the SEC and are also required to make notice filings in certain states. Virtually all aspects of the asset management business are subject to various federal and state laws and regulations. These laws and regulations are primarily intended to benefit the asset management clients.

RJF is under the supervision of, and subject to the rules, regulations, and periodic examination by the Fed. Additionally, RJ Bank is subject to the rules and regulations of the OCC, the Fed, the FDIC and the CFPB. Collectively, these rules and regulations cover all aspects of the banking business including lending practices, safeguarding deposits, capital structure, transactions with affiliates and conduct and qualifications of personnel.

RJ Bank is subject to the Community Reinvestment Act ("CRA"). The CRA is intended to encourage banks to help meet the credit needs of their service areas, including low and moderate income neighborhoods, consistent with safe and sound bank operations. The regulators examine and assign each bank a public CRA rating. These facts are also considered in evaluating mergers, acquisitions, and applications to open a branch or facility. Failure to adequately meet these criteria could impose additional requirements and limitations on RJ Bank.

RJF as a financial holding company, and RJ Bank, are subject to various capital requirements. Failure to meet minimum capital requirements can initiate certain mandatory, and possibly additional discretionary, actions by regulators that, if undertaken, could have a direct material effect on our and RJ Bank's financial results. Under capital adequacy guidelines and the regulatory framework for prompt corrective action, RJF and RJ Bank must meet specific capital guidelines that involve quantitative measures of assets, liabilities and certain off-balance sheet items as calculated under regulatory accounting practices. RJF's and RJ Bank's capital amounts and classification are also subject to qualitative judgments by the regulators about components of capital, risk-weightings of assets, off-balance sheet transactions, and other factors. Quantitative measures established by regulation to ensure capital adequacy

require RJF, as a financial holding company, and RJ Bank, to maintain minimum amounts and ratios of Total and Tier I capital to risk-weighted assets and Tier I capital to adjusted assets (as defined in the regulations). See Item 7, “Regulatory” in this report and Note 26 of the Notes to Consolidated Financial Statements in this Form 10-K, for further information.

Index

EXECUTIVE OFFICERS OF THE REGISTRANT

Executive officers of the registrant (which includes officers of certain significant subsidiaries) who are not Directors of the registrant are as follows:

Jennifer C. Ackart	50	Senior Vice President since August, 2009 and Controller since February, 1995
Bella Loykhter Allaire	61	Executive Vice President - Technology and Operations - Raymond James & Associates, Inc. since June, 2011; Managing Director and Chief Information Officer, UBS Wealth Management Americas, November, 2006 - January, 2011
Paul D. Allison	58	Chairman, President and CEO - Raymond James Ltd. since January, 2009; Co-President and Co-CEO - Raymond James Ltd., August, 2008 - January, 2009
John C. Carson, Jr.	58	President since April, 2012; President - Morgan Keegan & Company, LLC, formerly known as Morgan Keegan & Company, Inc., since July, 2013; Chief Executive Officer and Executive Managing Director - Morgan Keegan & Company, Inc., March, 2008 - July, 2013
George Catanese	55	Senior Vice President since October, 2005 and Chief Risk Officer since February, 2006
Scott A. Curtis	52	President - Raymond James Financial Services, Inc., since January, 2012; Senior Vice President - Private Client Group - Raymond James & Associates, Inc., July, 2005 - December 2011
Jeffrey A. Dowdle	50	Executive Vice President - Asset Management Group, since February, 2014; President - Asset Management Services - Raymond James & Associates, Inc., January, 2005 - February 2014; Senior Vice President - Raymond James & Associates, Inc., January, 2005 - February, 2014
Tashtego S. Elwyn	43	President - Private Client Group - Raymond James & Associates, Inc., since January, 2012; Regional Director - Raymond James & Associates, Inc., October, 2006 - December, 2011
Jeffrey P. Julien	58	Executive Vice President - Finance since August, 2009, Chief Financial Officer since April, 1987 and Treasurer since February, 2011; Director and/or officer of several RJF subsidiaries
Paul L. Matecki	58	Senior Vice President since February, 2000, General Counsel since February, 2005 and Secretary since February, 2006
Steven M. Raney	49	President and CEO - Raymond James Bank, N.A. since January, 2006
Jeffrey E. Trocin	55	President - Global Equities and Investment Banking - Raymond James & Associates, Inc. since July, 2013; Executive Vice President - Equity Capital Markets - Raymond James & Associates, Inc., February 2001 - July, 2013

Dennis W. Zank	60	Chief Operating Officer since January, 2012; Chief Executive Officer - Raymond James & Associates, Inc. since January, 2012; President - Raymond James & Associates, Inc., December, 2002 - December, 2011
----------------	----	--

Except where otherwise indicated, the executive officer has held his or her current position for more than five years.

Index

EMPLOYEES AND INDEPENDENT CONTRACTORS

Our employees and independent contractors (collectively referred to hereinafter as “associates”), are vital to our success in the financial services industry. As of September 30, 2014, we had approximately 10,300 employees. As of September 30, 2014, we had more than 3,600 independent contractor financial advisors with whom we are affiliated.

OTHER INFORMATION

Our Internet address is www.raymondjames.com. We make available on our website, free of charge, our Annual Reports on Form 10-K, Quarterly Reports on Form 10-Q, Current Reports on Form 8-K and amendments to those reports filed or furnished pursuant to Section 13(a) or 15(d) of the Securities Exchange Act of 1934, as soon as reasonably practicable after we electronically file such material with, or furnish it to, the SEC.

Factors affecting “forward-looking statements”

Certain statements made in this report on Form 10-K may constitute “forward-looking statements” under the Private Securities Litigation Reform Act of 1995. Forward-looking statements include information concerning future strategic objectives, business prospects, anticipated savings, financial results (including expenses, earnings, liquidity, cash flow and capital expenditures), industry or market conditions, demand for and pricing of our products, acquisitions and divestitures, anticipated results of litigation and regulatory developments or general economic conditions. In addition, words such as “believes,” “expects,” “anticipates,” “intends,” “plans,” “estimates,” “projects,” “forecasts,” and future or conditional verbs such as “will,” “may,” “could,” “should,” and “would,” as well as any other statement that necessarily depends on future events, are intended to identify forward-looking statements. Forward-looking statements are not guarantees, and they involve risks, uncertainties and assumptions. Although we make such statements based on assumptions that we believe to be reasonable, there can be no assurance that actual results will not differ materially from those expressed in the forward-looking statements. We caution investors not to rely unduly on any forward-looking statements and urge you to carefully consider the risks described in Item 1A, “Risk Factors,” in this report. We expressly disclaim any obligation to update any forward-looking statement in the event it later turns out to be inaccurate, whether as a result of new information, future events or otherwise.

Item 1A. RISK FACTORS

Our operations and financial results are subject to various risks and uncertainties, including those described below, that could adversely affect our business, financial condition, results of operations, liquidity and the trading price of our common stock or our senior notes which are listed on the NYSE.

RISKS RELATED TO OUR BUSINESS AND INDUSTRY

Damage to our reputation could damage our businesses.

Maintaining our reputation is critical to attracting and maintaining clients, customers, investors and associates. If we fail to deal with, or appear to fail to deal with, issues that may give rise to reputational risk, we could significantly harm our business prospects. These issues include, but are not limited to, any of the risks discussed in this Item 1A, appropriately dealing with potential conflicts of interest, legal and regulatory requirements, ethical issues, money-laundering, privacy, record keeping, sales and trading practices, failure to sell securities we have underwritten at the anticipated price levels, and the proper identification of the legal, reputational, credit, liquidity, and market risks inherent in our products. A failure to maintain appropriate standards of service and quality, or a failure or perceived failure to treat customers and clients fairly, can result in client dissatisfaction, litigation and heightened regulatory scrutiny, all of which can lead to lost revenue, higher operating costs and harm to our reputation. Further, negative

publicity regarding us, whether or not true, may also harm our future business prospects.

We are affected by domestic and international macroeconomic conditions that impact the global financial markets.

We are engaged in various financial services businesses. As such, we are generally affected by domestic and international macroeconomic and political conditions, including levels of economic output, interest and inflation rates, employment levels, consumer confidence levels, and fiscal and monetary policy. These conditions may directly and indirectly impact a number of factors in the global financial markets that may be detrimental to our operating results, including trading levels, investing, and origination activity in the securities markets, security valuations, the absolute and relative level and volatility of interest and currency rates, real estate values, the actual and perceived quality of issuers and borrowers, and the supply of and demand for loans and deposits.

Index

At times over the last several years we have experienced operating cycles during weak and uncertain U.S. and global economic conditions, including low levels of economic output, artificially maintained levels of historically low interest rates, relatively high rates of unemployment, and significant uncertainty with regards to fiscal and monetary policy both domestically and abroad. These conditions led to several factors in the global financial markets that from time to time negatively impacted our net revenue and profitability. While select factors indicate signs of improvement, uncertainty remains. A period of sustained downturns and/or volatility in the securities markets, prolonged continuation of the artificially low level of short term interest rates, a return to increased dislocations in the credit markets, reductions in the value of real estate, and other negative market factors could significantly impair our revenues and profitability. We could experience a decline in commission revenue from a lower volume of trades we execute for our clients, a decline in fees from reduced portfolio values of securities managed on behalf of our clients, a reduction in revenue from the number and size of transactions in which we provide underwriting, financial advisory and other services, increased credit provisions and charge-offs, losses sustained from our customers' and market participants' failure to fulfill their settlement obligations, reduced net interest earnings, and other losses. These periods of reduced revenue and other losses could be accompanied by periods of reduced profitability because certain of our expenses including but not limited to our interest expense on debt, rent, facilities and salary expenses are fixed and, our ability to reduce them over short periods of time is limited.

U.S. markets may also be impacted by political and civil unrest occurring in the Middle East and in Eastern Europe and Russia. Concerns about the European Union's ("EU") sovereign debt in recent years has caused uncertainty and disruption for financial markets globally. Continued uncertainties loom over the outcome of the EU's financial support programs and the possibility exists that other EU member states may experience similar financial troubles in the future. Any negative impact on economic conditions and global markets from these matters could adversely affect our business, financial condition and liquidity.

Our businesses and earnings are affected by the fiscal and other policies adopted by various regulatory authorities of the United States, foreign governments, and domestic and international agencies. The Fed regulates the supply of money and credit in the United States. Fed policies determine in large part the cost of funds for lending and investing and the return earned on those loans and investments. The market impact from such policies can also materially decrease the value of certain of our financial assets, most notably debt securities. Changes in Fed policies are beyond our control and, consequently, the impact of these changes on our activities and results of our operations are difficult to predict. We may also be indirectly impacted by fiscal and monetary policy enacted in various global markets.

U.S. state and local governments also continue to struggle with budget pressures caused by the ongoing less than optimal economic environment, and ongoing concerns regarding municipal issuer credit quality. If these trends continue or worsen, investor concerns could potentially reduce the number and size of transactions in which we participate and in turn reduce investment banking revenues. In addition such factors could adversely affect the value of the municipal securities we hold in our trading securities portfolio.

RJ Bank is particularly affected by economic conditions in North America. United States and/or Canadian factors which are indicative of market conditions include: interest rates, the rate of unemployment, real estate prices, the level of consumer confidence, changes in consumer spending and the number of personal bankruptcies, among others. The deterioration of these factors can diminish loan demand, lead to an increase in mortgage and other loan delinquencies, affect loan repayment performance and result in higher reserves and net charge-offs, which can adversely affect our earnings.

Lack of liquidity or access to capital could impair our business and financial condition.

Maintaining an appropriate level of liquidity, or the amount of capital that is readily available for investment, spending, or to meet our contractual obligations is essential to our business. Our inability to maintain adequate levels

of capital in the form of cash and readily available access to the credit and capital markets could have a significant negative effect on our financial condition. If liquidity from our brokerage or banking operations is inadequate or unavailable, we may be required to scale back or curtail our operations, including limiting our efforts to recruit additional financial advisors, selling assets at prices that may be less favorable to us, and cutting or eliminating the dividends we pay to our shareholders. Some potential conditions that could negatively affect our liquidity include the inability of our subsidiaries to generate cash in the form of dividends from earnings, changes imposed by regulators to our liquidity or capital requirements in our subsidiaries that may prevent the upstream of dividends in the form of cash to the parent company, limited or no accessibility to credit markets for secured and unsecured borrowings by our subsidiaries, diminished access to the capital markets for our company, and other commitments or restrictions on capital as a result of adverse legal settlements, judgments, or regulatory sanctions.

The availability of outside financing, including access to the credit and capital markets, depends on a variety of factors, such as conditions in the debt and equity markets, the general availability of credit, the volume of securities trading activity, the overall availability of credit to the financial services sector, and our credit ratings. Our cost and availability of funding may be adversely

Index

affected by illiquid credit markets and wider credit spreads. Additionally, lenders may from time to time curtail, or even cease, to provide funding to borrowers as a result of any future concerns about the stability of the markets generally, and the strength of counterparties specifically.

If RJF's credit ratings were downgraded, or if rating agencies indicate that a downgrade may occur, our business, financial position, and results of operations could be adversely affected, perceptions of our financial strength could be damaged, and as a result, adversely affect our relationships with clients. Such a reduction in our credit ratings could also adversely affect our liquidity and competitive position, increase our incremental borrowing costs, limit our access to the capital markets, trigger obligations under certain financial agreements, or decrease the number of investors, clients and counterparties willing or permitted to do business with or lend to us, thereby curtailing our business operations and reducing profitability.

We may not be able to successfully obtain additional outside financing to fund our operations on favorable terms, or at all. The impact of a credit rating downgrade to a level below investment grade would result in our breaching provisions in one of our credit agreements and certain of our derivative instruments, and may result in a request for immediate payment and/or ongoing overnight collateralization on our derivative instruments in liability positions (see Note 18 of the Notes to Consolidated Financial Statements in this Form 10-K for such information as of September 30, 2014).

Furthermore, as a bank holding company, we may become subject to a prohibition or to limitations on our ability to pay dividends or repurchase our stock. The OCC, the Fed, the FDIC, and the SEC (through FINRA) have the authority, and under certain circumstances the duty, to prohibit or to limit the payment of dividends by the subsidiaries to their parent, for the subsidiaries they supervise.

See Item 7, "Management's Discussion and Analysis of Financial Condition and Results of Operations - Liquidity and Capital Resources," in this report for additional information on liquidity and how we manage our liquidity risk.

We are exposed to market risk.

We are, directly and indirectly, affected by changes in market conditions. Market risk generally represents the risk that values of assets and liabilities or revenues will be adversely affected by changes in market conditions. For example, changes in interest rates could adversely affect our net interest spread, the difference between the yield we earn on our assets and the interest rate we pay for deposits and other sources of funding, which in turn impacts our net interest income and earnings. Changes in interest rates could affect the interest earned on assets differently than interest paid on liabilities. In our brokerage operations, a rising interest rate environment generally results in our earning a larger net interest spread. Conversely in those operations, a falling interest rate environment generally results in our earning a smaller net interest spread. If we are unable to effectively manage our interest rate risk, changes in interest rates could have a material adverse effect on our profitability.

Market risk is inherent in the financial instruments associated with our operations and activities including loans, deposits, securities, short-term borrowings, long-term debt, trading account assets and liabilities, derivatives, and venture capital and merchant banking investments. Market conditions that change from time to time, thereby exposing us to market risk, include fluctuations in interest rates, equity prices, relative exchange rates, and price deterioration or changes in value due to changes in market perception or actual credit quality of an issuer.

In addition, disruptions in the liquidity or transparency of the financial markets may result in our inability to sell, syndicate or realize the value of security positions, thereby leading to increased concentrations. The inability to reduce our positions in specific securities may not only increase the market and credit risks associated with such positions, but also increase the level of risk-weighted assets on our balance sheet, thereby increasing capital requirements which

could have an adverse effect on our business results, financial condition and liquidity.

Our venture capital and merchant banking investments are carried at fair value with unrealized gains and losses reflected in earnings. The value of our private equity portfolios can fluctuate and earnings from our venture capital investments can be volatile and difficult to predict. When, and if, we recognize gains can depend on a number of factors, including general economic conditions, the prospects of the companies in which we invest, when these companies go public, the size of our position relative to the public float and whether we are subject to any resale restrictions. Further, our investments could incur significant mark-to-market losses, especially if they have been written up in prior periods because of higher market prices.

See Item 7A, “Quantitative and Qualitative Disclosures about Market Risk,” in this report for additional information regarding our exposure to and approaches to managing market risk.

Index

We are exposed to credit risk.

We are generally exposed to the risk that third parties that owe us money, securities or other assets do not meet their performance obligations due to bankruptcy, lack of liquidity, operational failure or other reasons.

We actively buy and sell securities from and to clients and counterparties in the normal course of our broker-dealers market making and underwriting businesses exposing us to credit risk. Although generally collateralized by the underlying security to the transaction, we still face the risk associated with changes in the market value of collateral through settlement date. We also hold certain securities, loans and derivatives in our trading accounts. Deterioration in the actual or perceived credit quality of the underlying issuers of securities or loans, or the non-performance of issuers and counterparties to certain derivative contracts could result in trading losses.

We borrow securities from, and lend securities to, other broker-dealers, and may also enter into agreements to repurchase and agreements to resell securities as part of investing and financing activities. A sharp change in the security market values utilized in these transactions may result in losses if counterparties to these transactions fail to honor their commitments.

We manage the risk associated with these transactions by establishing and monitoring credit limits and by monitoring collateral and transaction levels daily. A significant deterioration in the credit quality of one of our counterparties could lead to concerns in the market about the credit quality of other counterparties in the same industry, thereby exacerbating our credit risk exposure. We may require counterparties to deposit additional collateral or substitute collateral pledged. In the case of aged securities failed to receive, we may, under industry regulations, purchase the underlying securities in the market and seek reimbursement for any losses from the counterparty.

Also, we permit our clients to purchase securities on margin. During periods of steep declines in securities prices, the value of the collateral securing client margin loans may fall below the amount of the purchaser's indebtedness. If the clients are unable to provide additional collateral for these margin loans, we may incur losses on those margin transactions. This may cause us to incur additional expenses defending or pursuing claims or litigation related to counterparty or client defaults.

We deposit our cash in depository institutions as a means of maintaining the liquidity necessary to meet our operating needs, and we also facilitate the deposit of cash awaiting investment in depository institutions on behalf of our clients. A failure of a depository institution to return these deposits could severely impact our operating liquidity, could result in significant reputational damage, and adversely impact our financial performance.

We also incur credit risk by lending to businesses and individuals including, but not limited to, C&I loans, commercial and residential mortgage loans, tax-exempt loans, home equity lines of credit, and margin and non-purpose loans collateralized by securities. We incur credit risk through our investments which include MBS, collateralized mortgage obligations, auction rate securities, and other municipal securities.

Our credit risk and credit losses can increase if our loans or investments are concentrated among borrowers or issuers engaged in the same or similar activities, industries, geographies, or to borrowers or issuers who as a group may be uniquely or disproportionately affected by economic or market conditions. The deterioration of an individually large exposure, for example due to a natural disaster, act of terrorism, severe weather event, or economic event, could lead to additional loan loss provisions and/or charges-offs, or credit impairment of our investments, and subsequently have a material impact on our net income and regulatory capital.

Declines in the real estate market or sustained economic downturns may cause us to write down the value of some of the loans in RJ Bank's portfolio, foreclose on certain real estate properties or write down the value of some of our

available for sale securities portfolio. Credit quality generally may also be affected by adverse changes in the financial performance or condition of our debtors or deterioration in the strength of the U.S. economy. Our policies also can adversely affect borrowers, potentially increasing the risk that they may fail to repay their loans or satisfy their obligations to us.

See Item 7A, “Quantitative and Qualitative Disclosures about Market Risk,” in this report for additional information regarding our exposure to and approaches to managing credit risk.

Our business depends on fees generated from the distribution of financial products, fees earned from the management of client accounts by our asset management subsidiaries and on advisory fees.

A large portion of our revenues are derived from fees generated from the distribution of financial products, such as mutual funds and variable annuities. Changes in the structure or amount of the fees paid by the sponsors of these products could directly

Index

affect our revenues, business and financial condition. In addition, if these products experience losses or increased investor redemptions, we may receive lower fee revenue from the investment management and distribution services we provide on behalf of the mutual funds and annuities. The investment management fees we are paid may also decline over time due to factors such as increased competition, renegotiation of contracts and the introduction of new, lower-priced investment products and services. Changes in market values or in the fee structure of asset management accounts would affect our revenues, business and financial condition. Asset management fees often are primarily comprised of base management and incentive fees. Management fees are primarily based on assets under management. Assets under management balances are impacted by net inflow/outflow of client assets and market values. Below-market investment performance by our funds and portfolio managers could result in a loss of managed accounts and could result in reputational damage that might make it more difficult to attract new investors and thus further impacting our business and financial condition. If we were to experience the loss of managed accounts, our fee revenue would decline. In addition, in periods of declining market values, our asset values under management may resultantly decline, which would negatively impact our fee revenues.

Our underwriting, market making, trading, and other business activities place our capital at risk.

We may incur losses and be subject to reputational harm to the extent that, for any reason, we are unable to sell securities which we have underwritten at the anticipated price levels. As an underwriter, we also are subject to heightened standards regarding liability for material misstatements or omissions in prospectuses and other offering documents relating to offerings we underwrite. As a market maker, we may own positions in specific securities, and these undiversified holdings concentrate the risk of market fluctuations and may result in greater losses than would be the case if our holdings were more diversified. In addition, we may incur losses as a result of proprietary positions we hold primarily in connection with our market making or underwriting activities.

From time to time and as part of our underwriting processes, we may carry significant positions in securities of a single issuer or issuers engaged in a specific industry. Sudden changes in the value of these positions could impact our financial results.

We have made and may continue to make principal investments in private equity funds and other illiquid investments, which are typically private limited partnership interests and securities that are not publicly traded. There is risk that we may be unable to realize our investment objectives by sale or other disposition at attractive prices or that we may otherwise be unable to complete a desirable exit strategy. In particular, these risks could arise from changes in the financial condition or prospects of the portfolio companies in which investments are made, changes in economic conditions or changes in laws, regulations, fiscal policies or political conditions. It could take a substantial period of time to identify attractive investment opportunities and then to realize the cash value of such investments through resale. Even if a private equity investment proves to be profitable, it may be several years or longer before any profits can be realized in cash.

The soundness of other financial institutions and intermediaries affects us.

We face the risk of operational failure, termination or capacity constraints of any of the clearing agents, exchanges, clearing houses or other financial intermediaries that we use to facilitate our securities transactions. As a result of the consolidation over the years among clearing agents, exchanges and clearing houses, our exposure to certain financial intermediaries has increased and could affect our ability to find adequate and cost-effective alternatives should the need arise. Any failure, termination or constraint of these intermediaries could adversely affect our ability to execute transactions, service our clients and manage our exposure to risk.

Our ability to engage in routine trading and funding transactions could be adversely affected by the actions and commercial soundness of other financial institutions. Financial services institutions are interrelated as a result of

trading, clearing, funding, counterparty or other relationships. We have exposure to many different industries and counterparties, and we routinely execute transactions with counterparties in the financial industry, including brokers and dealers, commercial banks, investment banks, mutual and hedge funds and other institutional clients. Furthermore, although we do not hold any EU sovereign debt, we may do business with and be exposed to financial institutions that have been affected by the EU sovereign debt circumstances. Defaults by, or even rumors or questions about the financial condition of, one or more financial services institutions, or the financial services industry generally, have historically led to market-wide liquidity problems and could lead to losses or defaults by us or by other institutions. Many of these transactions expose us to credit risk in the event of default of our counterparty or client. In addition, our credit risk may be exacerbated when the collateral held by us cannot be realized or is liquidated at prices not sufficient to recover the full amount of the loan or derivative exposure due us. Although we have not suffered any material or significant losses as a result of the failure of any financial counterparty, any such losses in the future may have a material adverse effect on our results of operations.

Index

We have experienced increased pricing pressures in areas of our business which may impair our future revenue and profitability.

Our business continues to experience increased pricing pressures on trading margins and commissions in fixed income and equity trading. In the fixed income market, regulatory requirements have resulted in greater price transparency, leading to increased price competition and decreased trading margins. In the equity market, we have experienced increased pricing pressure from institutional clients to reduce commissions, and this pressure has been augmented by the increased use of electronic and direct market access trading, which has created additional competitive downward pressure on trading margins. We believe that price competition and pricing pressures in these and other areas will continue as institutional investors continue to reduce the amounts they are willing to pay, including by reducing the number of brokerage firms they use, and some of our competitors seek to obtain market share by reducing fees, commissions or margins.

Regions may fail to honor its indemnification obligations associated with Morgan Keegan matters.

Under the definitive stock purchase agreement dated January 11, 2012 entered into by RJF and Regions governing our acquisition of Morgan Keegan (the "SPA"), Regions has ongoing obligations to continue to indemnify RJF with respect to certain litigation as well as other matters. RJF is relying on Regions to continue fulfilling its indemnification obligations under the SPA with respect to such matters. Our inability to enforce these indemnification provisions, or our failure to recover losses for which we are entitled to be indemnified, could result in our incurring significant costs for defense, settlement and any adverse judgments and resultantly have an adverse effect on our results of operations, financial condition, and our regulatory capital levels.

See Note 3 of the Notes to Consolidated Financial Statements in this Form 10-K for further information regarding these indemnification agreements.

Growth of our business could increase costs and regulatory and integration risks.

Integrating acquired businesses, providing a platform for new businesses and partnering with other firms involve a number of risks and present financial, managerial and operational challenges. We may incur significant expenses in connection with further expansion of our existing businesses, or recruitment of financial advisors, or in connection with strategic acquisitions or investments, if and to the extent they arise from time to time. Our overall profitability would be negatively affected if investments and expenses associated with such growth are not matched or exceeded by the revenues that are derived from such investment or growth.

Expansion may also create a need for additional compliance, documentation, risk management and internal control procedures, and often involves the hiring of additional personnel to monitor such procedures. To the extent such procedures are not adequate to appropriately monitor any new or expanded business, we could be exposed to a material loss or regulatory sanction.

Moreover, to the extent we pursue strategic acquisitions, we may be unable to complete such acquisitions on acceptable terms, or be unable to successfully integrate the operations of any acquired business into our existing business. Such acquisitions could be of significant size and/or complexity. This effort, together with difficulties we may encounter in integrating an acquired business, could have an adverse effect on our business, financial condition, and results of operations. In addition, we may need to raise equity capital or borrow to finance such acquisitions, which could dilute our shareholders or increase our leverage. Any such borrowings might not be available on terms as favorable to us as our current borrowings, or perhaps at all.

We face intense competition.

We are engaged in intensely competitive businesses. We compete on the basis of a number of factors, including the quality of our financial advisors and associates, our products and services, pricing (such as execution pricing and fee levels), location and reputation in relevant markets. Over time there has been substantial consolidation and convergence among companies in the financial services industry which has significantly increased the capital base and geographic reach of our competitors. See the section entitled "Competition" of Item 1 of this report for additional information about our competitors.

We compete directly with national full service broker-dealers, investment banking firms, and commercial banks, and to a lesser extent, with discount brokers and dealers and investment advisors. In addition, we face competition from more recent entrants into the market and increased use of alternative sales channels by other firms. We also compete indirectly for investment assets with insurance companies, real estate firms, hedge funds, and others. This competition could cause our business to suffer.

To remain competitive, our future success also depends in part on our ability to develop and enhance our products and services. In addition, the continued development of internet, networking or telecommunication technologies or other technological changes

Index

could require us to incur substantial expenditures to enhance or adapt our services or infrastructure. An inability to develop new products and services, or enhance existing offerings, could have a material adverse effect on our profitability.

Our ability to attract and retain senior professionals, qualified financial advisors and other associates is critical to the continued success of our business.

Our ability to develop and retain our client base depends on the reputation, judgment, business generation capabilities and skills of our senior professionals, particularly our managing directors, and the members of our executive committees, as well as employees and financial advisors. To compete effectively we must attract, retain and motivate qualified professionals, including successful financial advisors, investment bankers, trading professionals, portfolio managers and other revenue producing or specialized personnel. The reputations and relationships of our senior professionals with our clients are a critical element in obtaining and executing client engagement. Competitive pressures we experience could have an adverse effect on our business, results of operations, financial condition and liquidity.

Turnover in the financial services industry is high. The cost of retaining skilled professionals in the financial services industry has escalated considerably. Employers in the industry are increasingly offering guaranteed contracts, upfront payments, and increased compensation. These can be important factors in a current employee's decision to leave us as well as a prospective employee's decision to join us. As competition for skilled professionals in the industry remains intense, we may have to devote significant resources to attracting and retaining qualified personnel. To the extent we have compensation targets, we may not be able to retain our employees which could result in increased recruiting expense or result in our recruiting additional employees at compensation levels that are not within our target range. In particular, our financial results may be adversely affected by the costs we incur in connection with any upfront loans or other incentives we may offer to newly recruited financial advisors and other key personnel. If we were to lose the services of any of our investment bankers, senior equity research, sales and trading professionals, asset managers, or executive officers to a new or existing competitor or otherwise, we may not be able to retain valuable relationships and some of our clients could choose to use the services of a competitor instead of our services. If we are unable to retain our senior professionals or recruit additional professionals, our reputation, business, results of operations and financial condition will be adversely affected. Further, new business initiatives and efforts to expand existing businesses generally require that we incur compensation and benefits expense before generating additional revenues.

Moreover, companies in our industry whose employees accept positions with competitors frequently claim that those competitors have engaged in unfair hiring practices. We have been subject to several such claims in the past and may be subject to additional claims in the future as we seek to hire qualified personnel, some of whom may currently be working for our competitors. Some of these claims may result in material litigation. We could incur substantial costs in defending ourselves against these claims, regardless of their merits. Such claims could also discourage potential employees who currently work for our competitors from joining us.

We are exposed to operational risk.

Our diverse operations expose us to risk of loss resulting from inadequate or failed internal processes, people and systems, external events, including technological or connectivity failures either at the exchanges in which we do business or between our data center, operations processing sites or our branches. Our businesses depend on our ability to process and monitor, on a daily basis, a large number of complex transactions across numerous and diverse markets. The inability of our systems to accommodate an increasing volume of transactions could also constrain our ability to expand our businesses. Our financial, accounting, data processing or other operating systems and facilities may fail to operate properly or become disabled as a result of events that are wholly or partially beyond our control, adversely affecting our ability to process these transactions or provide these services. Operational risk exists in every activity, function or unit of our business, and can take the form of internal or external fraud, employment and hiring

practices, an error in meeting a professional obligation, or failure to meet corporate fiduciary standards. It is not always possible to deter employee misconduct, and the precautions we take to detect and prevent this activity may not be effective in all cases. If our employees engage in misconduct, our businesses would be adversely affected. Operational risk also exists in the event of business disruption, system failures or failed transaction processing. Third parties with which we do business could also be a source of operational risk, including with respect to breakdowns or failures of the systems or misconduct by the employees of such parties. In addition as we change processes or introduce new products and services, we may not fully appreciate or identify new operational risks that may arise from such changes. Increasing use of automated technology has the potential to amplify risks from manual or system processing errors, including outsourced operations.

Our business contingency plan in place is intended to ensure we have the ability to recover our critical business functions and supporting assets, including staff and technology, in the event of a business interruption. Despite the diligence we have applied to the development and testing of our plans, due to unforeseen factors, our ability to conduct business may in any case be adversely affected by a disruption involving physical site access, catastrophic events including weather related events, events involving

Index

electrical, environmental or communications malfunctions, as well as events impacting services provided by others that we rely upon which could impact our employees or third parties with whom we conduct business.

See Item 7A, “Quantitative and Qualitative Disclosures about Market Risk,” in this report for additional information regarding our exposure to and approaches to managing operational risk.

Associate misconduct, which is difficult to detect and deter, could harm us by impairing our ability to attract and retain clients and subjecting us to significant legal liability and reputational harm.

There have been a number of highly-publicized cases involving fraud or other misconduct by associates in the financial services industry, and there is a risk that our associates could engage in misconduct that adversely affects our business. For example, our banking business often requires that we deal with confidential matters of great significance to our clients. If our associates were to improperly use or disclose confidential information provided by our clients, we could be subject to regulatory sanctions and suffer serious harm to our reputation, financial position, current client relationships and ability to attract future clients. We are also subject to a number of obligations and standards arising from our asset management business and our authority over the assets managed by our asset management business. In addition our financial advisors may act in a fiduciary capacity, providing financial planning, investment advice and discretionary asset management. The violation of these obligations and standards by any of our associates would adversely affect our clients and us. It is not always possible to deter associate misconduct, and the precautions we take to detect and prevent this activity may not be effective in all cases. If our associates engage in misconduct, our business would be adversely affected.

Our businesses depend on technology.

Our businesses rely extensively on electronic data processing and communications systems. In addition to better serving clients, the effective use of technology increases efficiency and enables us to reduce costs. Adapting or developing our technology systems to meet new regulatory requirements, client needs, and competitive demands is critical for our business. Introduction of new technology presents challenges on a regular basis. There are significant technical and financial costs and risks in the development of new or enhanced applications, including the risk that we might be unable to effectively use new technologies or adapt our applications to emerging industry standards.

Our continued success depends, in part, upon our ability to successfully maintain and upgrade the capability of our systems, our ability to address the needs of our clients by using technology to provide products and services that satisfy their demands, and our ability to retain skilled information technology employees. Failure of our systems, which could result from events beyond our control, or an inability to effectively upgrade those systems or implement new technology-driven products or services, could result in financial losses, liability to clients, violations of applicable privacy and other laws, and regulatory sanctions.

Client and customer, public, and regulatory expectations regarding operational and information security have increased. Thus, our operational systems and infrastructure must continue to be safeguarded and monitored for potential failures, disruptions and breakdowns. Our operations rely on the secure processing, storage and transmission of confidential and other information in our computer systems and networks. Although cyber security incidents among financial services firms are on the rise, to-date we have not experienced any material losses relating to cyber attacks or other information security breaches, however, there can be no assurance that we will not suffer such losses in the future. Notwithstanding that we take protective measures and endeavor to modify them as circumstances warrant, our computer systems, software and networks may be vulnerable to human error, natural disasters, power loss, spam attacks, unauthorized access, distributed denial of service attacks, computer viruses and other malicious code and other events that could have a security impact. If one or more of these events occur, this could jeopardize our, or our clients' or counterparties', confidential and other information processed, stored in, and transmitted through our

computer systems and networks, or otherwise cause interruptions or malfunctions in our, our clients', our counterparties' or third parties' operations. We may be required to expend significant additional resources to modify our protective measures, to investigate and remediate vulnerabilities or other exposures or to make required notifications, and we may be subject to litigation and financial losses that are either not insured or are not fully covered through any insurance we maintain. A technological breakdown could also interfere with our ability to comply with financial reporting and other regulatory requirements, exposing us to potential disciplinary action by regulators.

Extraordinary trading volumes beyond reasonably foreseeable spikes in volumes could cause our computer systems to operate at an unacceptably slow speed or even fail. While we have made investments to maintain the reliability and scalability of our systems and maintain hardware to address extraordinary volumes, there can be no assurance that our systems will be sufficient to handle truly extraordinary and unforeseen circumstances. Systems failures and delays could occur and could cause, among other things, unanticipated disruptions in service to our clients or slower system response time resulting in transactions not being processed as quickly as our clients desire, resulting in client dissatisfaction.

Index

In providing services to clients, we may manage, utilize and store sensitive or confidential client or employee data, including personal data. As a result, we may be subject to numerous laws and regulations designed to protect this information, such as the U.S. federal and state laws governing the protection of personally identifiable information and international laws. These laws and regulations are increasing in complexity and number. If any person, including any of our associates, negligently disregards or intentionally breaches our established controls with respect to client or employee data, or otherwise mismanages or misappropriates that data, we could be subject to significant monetary damages, regulatory enforcement actions, fines and/or criminal prosecution. In addition, unauthorized disclosure of sensitive or confidential client or employee data, whether through systems failure, employee negligence, fraud or misappropriation, could damage our reputation and cause us to lose clients and their related revenue in the future. Potential liability in the event of a security breach of client data could be significant and depending on the circumstances giving rise to the breach, this liability may not be subject to a contractual limit of liability or an exclusion of consequential or indirect damages.

See Item 7A, “Quantitative and Qualitative Disclosures about Market Risk,” in this report for additional information regarding our exposure to and approaches to managing these types of operational risk.

Our operations could be adversely affected by serious weather conditions.

Certain of our principal operations are located in St. Petersburg, Florida. While we have a business continuity plan that permits significant operations to be conducted from our Southfield, Michigan and Memphis, Tennessee locations and our information systems processing is conducted out of our new information technology data center in the Denver, Colorado area (see Item 2, “Properties” in this report for further discussion), our operations could be adversely affected by hurricanes or other serious weather conditions that could affect the processing of transactions, communications, and the ability of our associates to get to our offices, or work from home. Refer to the “we are exposed to credit risk” risk factor in this Item 1A for a discussion of how events, including weather events, could adversely impact RJ Bank’s loan portfolio and the “we are exposed to operational risk” risk factor in this Item 1A, for a discussion of how weather related events could impact our ability to conduct business.

We are exposed to litigation risks.

Many aspects of our business involve substantial risks of liability, arising in the normal course of business. We have been named as a defendant or co-defendant in lawsuits and arbitrations involving primarily claims for damages. The risks associated with potential litigation often may be difficult to assess or quantify and the existence and magnitude of potential claims often remain unknown for substantial periods of time. Unauthorized or illegal acts of our associates could result in substantial liability for us. Advisors may not understand investor needs or risk tolerances. Such failures may result in the recommendation or purchase of a portfolio of assets that may not be suitable for the investor. To the extent we fail to know our clients or improperly advise them, we could be found liable for losses suffered by such clients, which could harm our business. Our Private Client Group business segment has historically had more risk of litigation than our institutional businesses.

In highly volatile markets, the volume of claims and amount of damages sought in litigation and regulatory proceedings against financial institutions has historically increased. These risks include potential liability under securities or other laws for alleged materially false or misleading statements made in connection with securities offerings and other transactions, issues related to the suitability of our investment advice based on our clients’ investment objectives, the inability to sell or redeem securities in a timely manner during adverse market conditions, contractual issues, employment claims and potential liability for other advice we provide to participants in strategic transactions. Substantial legal liability could have a material adverse financial effect or cause us significant reputational harm, which in turn could seriously harm our business and our prospects.

In addition to the foregoing financial costs and risks associated with potential liability, the costs of defending individual litigation and claims continue to increase over time. The amount of outside attorneys' fees incurred in connection with the defense of litigation and claims could be substantial and might materially and adversely affect our results of operations.

As it pertains to Morgan Keegan, a number of the types of claims and matters described above arising prior to our acquisition are subject to indemnification from Regions. Refer to the separate risk factor in this section entitled, "Regions may fail to honor its indemnification obligations associated with Morgan Keegan matters" for a discussion of the risks associated with these indemnifications.

See Item 3, "Legal Proceedings" in this report for a discussion of our legal matters and Item 7A, "Quantitative and Qualitative Disclosures about Market Risk," in this report for discussion regarding our approach to managing legal risk.

Index

The preparation of the consolidated financial statements requires the use of estimates that may vary from actual results and new accounting standards could adversely affect future reported results.

The preparation of the consolidated financial statements in conformity with U.S. generally accepted accounting principles (“GAAP”) requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities, disclosure of contingent assets and liabilities at the date of the consolidated financial statements and the reported amounts of revenues and expenses during the reporting period. Such estimates and assumptions may require management to make difficult, subjective and complex judgments about matters that are inherently uncertain. One of our most critical estimates is RJ Bank’s allowance for loan losses. At any given point in time, conditions in the real estate and credit markets may influence the complexity and increase the uncertainty involved in estimating the losses inherent in RJ Bank’s loan portfolio. If management’s underlying assumptions and judgments prove to be inaccurate, one outcome could be that the allowance for loan losses could be insufficient to cover actual losses. Our financial condition, including our liquidity and capital, and results of operations could be materially and adversely impacted. See Item 7, “Management’s Discussion and Analysis of Financial Condition and Results of Operations-Critical Accounting Estimates,” in this report for additional information on the nature of these estimates.

Our financial instruments, including certain trading assets and liabilities, available for sale securities including Auction Rate Securities (“ARS”), certain loans, intangible assets and private equity investments, among other items, require management to make a determination of their fair value in order to prepare our consolidated financial statements. Where quoted market prices are not available, we may make fair value determinations based on internally developed models or other means which ultimately rely to some degree on our judgment. Some of these instruments and other assets and liabilities may have no direct observable inputs, making their valuation particularly subjective, being based on significant estimation and judgment. In addition, sudden illiquidity in markets or declines in prices of certain securities may make it more difficult to value certain items, which may lead to the possibility that such valuations will be subject to further change or adjustment and could lead to declines in our earnings in subsequent periods.

Our accounting policies and methods are fundamental to how we record and report our financial condition and results of operations. From time to time the Financial Accounting Standards Board (“FASB”) and the SEC change the financial accounting and reporting standards that govern the preparation of our financial statements. In addition, accounting standard setters and those who interpret the accounting standards may change or even reverse their previous interpretations or positions on how these standards should be applied. These changes can be hard to predict and can materially impact how we record and report our financial condition and results of operations. In some cases, we could be required to apply a new or revised standard retroactively, resulting in our restating prior period financial statements. For a further discussion of some of our significant accounting policies and standards, see the “Critical Accounting Estimates” discussion within Item 7 in this report, and Note 2 of the Notes to Consolidated Financial Statements, in this Form 10-K.

In December, 2012 the FASB issued a proposed standard on accounting for credit losses. The standard would replace multiple existing impairment models, including replacing an “incurred loss” model for loans with an “expected loss” model. The FASB announced it will establish the effective date when it issues the final standard. We cannot predict whether or when a final standard will be issued, when it will be effective, what its final provisions will be, or the potential impact its eventual adoption may have on our retained earnings.

Our risk management and conflicts of interest policies and procedures may leave us exposed to unidentified or unanticipated risk.

We seek to manage, monitor and control our operational, legal and regulatory risk through operational and compliance reporting systems, internal controls, management review processes and other mechanisms; however, there can be no

assurance that our procedures will be fully effective. Our banking and trading processes seek to balance our ability to profit from banking and trading positions with our exposure to potential losses. While we employ limits and other risk mitigation techniques, those techniques and the judgments that accompany their application cannot anticipate economic and financial outcomes or the specifics and timing of such outcomes.

Further, our risk management methods may not effectively predict future risk exposures, which could be significantly greater than the historical measures indicate. In addition, some of our risk management methods are based on an evaluation of information regarding markets, clients and other matters that are based on assumptions that may no longer be accurate. A failure to adequately manage our growth, or to effectively manage our risk, could materially and adversely affect our business and financial condition. Our risk management processes include addressing potential conflicts of interest that arise in our business. We have procedures and controls in place to address conflicts of interest. Management of potential conflicts of interest has become increasingly complex as we expand our business activities through more numerous transactions, obligations and interests with and among our clients. The failure to adequately address or the perceived failure to adequately address, conflicts of interest could affect our reputation,

Index

the willingness of clients to transact business with us or give rise to litigation or regulatory actions. Therefore, there can be no assurance that conflicts of interest will not arise in the future that could cause material harm to us.

For more information on how we monitor and manage market and certain other risks, see Item 7A, “Quantitative and Qualitative Disclosures about Market Risk,” in this report.

We are exposed to risk from international markets.

We do business in other parts of the world, including a few developing regions of the world commonly known as emerging markets and, as a result, are exposed to a number of risks, including economic, market, litigation and regulatory risks, in non-U.S. markets. Our businesses and revenues derived from non-U.S. operations are subject to risk of loss from currency fluctuations, social or political instability, changes in governmental policies or policies of central banks, downgrades in the credit ratings of sovereign countries, expropriation, nationalization, confiscation of assets and unfavorable legislative and political developments. Action or inaction in any of these operations, including failure to follow proper practices with respect to regulatory compliance and/or corporate governance, could harm our operations and/or our reputation. We also invest or trade in the securities of corporations located in non-U.S. jurisdictions. Revenues from the trading of non-U.S. securities also may be subject to negative fluctuations as a result of the above factors. The impact of these fluctuations could be magnified because generally non-U.S. trading markets, particularly in emerging market countries, are smaller, less liquid and more volatile than U.S. trading markets. Additionally, a political, economic or financial disruption in a country or region could adversely impact our business and increase volatility in financial markets generally.

We have risks related to our insurance programs.

Our operations and financial results are subject to risks and uncertainties related to our use of a combination of insurance, self-insured retention and self-insurance for a number of risks, including most significantly: property and casualty, workers’ compensation, errors and omissions liability, general liability and the portion of employee-related health care benefits plans we fund, among others.

While we endeavor to purchase insurance coverage that is appropriate to our assessment of risk, we are unable to predict with certainty the frequency, nature or magnitude of claims for direct or consequential damages. Our business may be negatively affected if in the future our insurance proves to be inadequate or unavailable. In addition, insurance claims may divert management resources away from operating our business.

RISKS RELATED TO OUR REGULATORY ENVIRONMENT

Financial services firms have been subject to increased scrutiny over the last several years, increasing the risk of financial liability and reputational harm resulting from adverse regulatory actions.

Firms in the financial services industry have been operating in a difficult regulatory environment which we expect will become even more stringent in light of recent well-publicized failures of regulators to detect and prevent fraud. The industry has experienced increased scrutiny from a variety of regulators, including the SEC, the NYSE, FINRA, the OCC, the CFPB, the Fed, and state attorneys general. Penalties and fines sought by regulatory authorities have increased substantially over the last several years. We may be adversely affected by changes in the interpretation or enforcement of existing laws and rules by these governmental authorities and self-regulatory organizations. Each of the regulatory bodies with jurisdiction over us has regulatory powers dealing with many aspects of financial services, including, but not limited to, the authority to fine us and to grant, cancel, restrict or otherwise impose conditions on the right to carry on particular businesses. For example, a failure to comply with the obligations imposed by the

Exchange Act on broker-dealers and the Investment Advisers Act on investment advisers, including record-keeping, advertising and operating requirements, disclosure obligations and prohibitions on fraudulent activities, or by the Investment Company Act of 1940, could result in investigations, sanctions and reputational damage. We also may be adversely affected as a result of new or revised legislation or regulations imposed by the SEC, other U.S. or foreign governmental regulatory authorities or FINRA or other self-regulatory organizations that supervise the financial markets. Substantial legal liability or significant regulatory action against us could have adverse financial effects on us or cause reputational harm to us, which could harm our business prospects.

Changes in regulations resulting from either the Dodd-Frank Act or any new regulations may affect our businesses.

The market and economic conditions over the past several years have led to legislation and numerous and continuing proposals for changes in the regulation of the financial services industry, including significant additional legislation and regulation in the

Index

U.S. and abroad. The Dodd-Frank Act enacted sweeping changes in the supervision and regulation of the financial industry (see Item 1, Regulation, in this report for a discussion of such changes including the Volcker Rule). The ultimate impact that the Dodd-Frank Act will have on us, the financial industry and the economy cannot be known until all of the implementing regulations called for under the legislation have been finalized and implemented. These legislative and regulatory changes could affect our revenue, limit our ability to pursue business opportunities, impact the value of assets that we hold, require us to change certain of our business practices, impose additional costs on us, or otherwise adversely affect our businesses.

The Dodd-Frank Act impacts the manner in which we market our products and services, manage our business and operations and interact with regulators, all of which while not currently anticipated to, could materially impact our results of operations, financial condition and liquidity. Certain provisions of the Dodd-Frank Act that have or may impact our business include, but are not limited to: the establishment of a fiduciary standard for broker-dealers, regulatory oversight of incentive compensation, the imposition of capital requirements on financial holding companies and to a lesser extent, greater oversight over derivatives trading and restrictions on proprietary trading. There is also increased regulatory scrutiny (and related compliance costs) as we continue to grow and surpass certain thresholds outlined in the Dodd-Frank Act. These include but are not limited to RJ Bank's oversight by the CFPB. The CFPB has been active in investigating products, services and operations of credit providers, including banks, for compliance with various laws such as the Truth in Lending Act, the Equal Credit Opportunity Act, the Fair Credit Reporting Act, and the Real Estate Settlement Procedures Act. Any actions taken by the CFPB could result in requirements to alter or cease offering affected products and services, make them less attractive, restrict our ability to offer them, or increase our regulatory and compliance costs. To the extent the Dodd-Frank Act impacts the operations, financial condition, liquidity and capital requirements of unaffiliated financial institutions with whom we transact business, those institutions may seek to pass on increased costs, reduce their capacity to transact, or otherwise present inefficiencies in their interactions with us.

In December, 2013, the final version of the Volcker Rule was adopted (see Item 1, Regulation, in this report for discussion of the Volcker Rule). Although we have not historically engaged in significant levels of trading for our own account, due to our underwriting and market making activities, the Volcker Rule will likely increase our operational and compliance costs, and may reduce our trading revenues, require a change in our principal capital private equity investments, and as a result adversely affect our results of operations.

The SEC recently adopted amendments, most of which were effective October, 2013, to its financial responsibility rules, including changes to the net capital rule, the customer protection rule, the record-keeping rules, and the notification rules applicable to our broker-dealer subsidiaries. We are currently evaluating the impact of these amendments on our broker-dealer subsidiaries. Such impact could have an adverse effect on certain of our broker-dealer subsidiaries.

The Basel III capital standards will impose additional capital and other requirements on us that could decrease our competitiveness and profitability.

In July 2013, the OCC, the FRB and the FDIC released final U.S. Basel III regulatory capital rules implementing the global regulatory capital reforms of Basel III and certain changes required by the Dodd-Frank Act. The rule increases the quantity and quality of regulatory capital, establishes a capital conservation buffer, and makes selected changes to the calculation of risk-weighted assets. The rule becomes effective for us January 1, 2015, subject to a transition period for several aspects of the rule, including the new minimum capital ratio requirements, the capital conservation buffer, and the regulatory capital adjustments and deductions. We are currently evaluating the impact of these rules on both RJ Bank and RJF. The increased capital requirements could restrict our ability to grow during favorable market conditions or require us to raise additional capital. As a result, our business, results of operations, financial condition or prospects could be adversely affected.

Failure to comply with regulatory capital requirements primarily applicable to RJF, RJ Bank or our broker-dealer subsidiaries would significantly harm our business.

RJF and RJ Bank are subject to various regulatory and capital requirements administered by various federal regulators. Under capital adequacy guidelines and the regulatory framework for prompt corrective action, RJF and RJ Bank must meet specific capital guidelines that involve quantitative measures of RJF and RJ Bank's assets, liabilities, and certain off-balance sheet items as calculated under regulatory accounting practices. RJF's and RJ Bank's capital amounts and classification are also subject to qualitative judgments by the regulators about components of our capital, risk-weightings of assets, off-balance sheet transactions, and other factors. Quantitative measures established by regulation to ensure capital adequacy require RJF and RJ Bank to maintain minimum amounts and ratios of Total and Tier I Capital to risk-weighted assets and Tier I Capital to adjusted assets (as defined in the regulations). Failure to meet minimum capital requirements can trigger certain mandatory and possibly additional discretionary, actions by regulators that, if undertaken, could harm either RJF or RJ Bank's operations and our financial condition.

Index

As more fully discussed in Item 1, Regulation, in this report, RJF is required to perform annual stress tests using certain scenarios provided by the Fed. While we believe that both the quality and magnitude of our capital base is sufficient to support our current operations given our risk profile, the results of the stress testing process may affect our approach to managing and deploying capital.

Additionally, as RJF is a holding company, it depends on dividends, distributions and other payments from its subsidiaries to fund payments of its obligations including, among others, debt service. We are subject to the SEC's uniform net capital rule (Rule 15c3-1) and the net capital rule of FINRA, which may limit our ability to make withdrawals of capital from our broker-dealer subsidiaries. The uniform net capital rule sets the minimum level of net capital a broker-dealer must maintain and also requires that a portion of its assets be relatively liquid. FINRA may prohibit a member firm from expanding its business or paying cash dividends if resulting net capital falls below its requirements. In addition, our Canada based broker-dealer subsidiary is subject to similar limitations under applicable regulation in that jurisdiction. Regulatory capital requirements applicable to some of our significant subsidiaries may impede access to funds the holding company needs to make payments on any such obligations.

See Note 26 of the Notes to Consolidated Financial Statements in this Form 10-K for further information on regulations and capital requirements.

We operate in a highly regulated industry in which future developments could adversely affect our business and financial condition.

The securities industry is subject to extensive regulation, and broker-dealers and investment advisors are subject to regulations covering all aspects of the securities business including, but not limited to, sales and trading methods, trade practices among broker-dealers, use and safekeeping of clients' funds and securities, capital structure of securities firms, anti-money laundering efforts, record keeping and the conduct of directors, officers and employees. If laws or regulations are violated, we could be subject to one or more of the following: civil liability, criminal liability, sanctions which could include the revocation of our subsidiaries' registrations as investment advisors or broker-dealers, the revocation of the licenses of our financial advisors, censures, fines or a temporary suspension or permanent bar from conducting business. Any of those events could have a material adverse effect on our business, financial condition and prospects.

The majority of our affiliated financial advisors are independent contractors. Legislative or regulatory action that redefines the criteria for determining whether a person is an employee or an independent contractor could materially impact our relationships with our advisors and our business, resulting in an adverse effect on our results of operations.

We are subject to financial holding company regulatory reporting requirements including the maintenance of certain risk-based regulatory capital levels that could impact various capital allocation decisions of one or more of our businesses. However, due to our strong current capital position, we do not anticipate that these capital level requirements will have any negative impact on our future business activities. See the section entitled "Business - Regulation" of Item 1 in this report for additional information.

As a financial holding company, we are regulated by the Fed. RJ Bank is regulated by the OCC, the Fed, the CFPB, and the FDIC. This oversight includes, but is not limited to, scrutiny with respect to affiliate transactions and compliance with consumer regulations. The economic and political environment over the past several years has caused increased focus on the regulation of the financial services industry, including many proposals for new rules. Any new rules issued by our regulators could affect us in substantial and unpredictable ways and could have an adverse effect on our business, financial condition, and results of operations. We also may be adversely affected as a result of changes in federal, state, or foreign tax laws, or by changes in the interpretation or enforcement of existing laws and regulations.

The SEC has proposed certain measures that would establish a new framework to replace the requirements of Rule 12b-1 under the Investment Company Act of 1940, with respect to how mutual funds pay fees to cover the costs of selling and marketing their shares. The staff of the Office of Compliance, Inspections and Examinations has indicated that it is reviewing use of fund assets to pay for fees to sub-transfer agents and sub-administrators for services that may be deemed to be distribution-related. Any adoption of such measures would be phased in over a number of years. As these measures are neither final nor undergoing implementation throughout the financial services industry, the impact of changes such as those currently proposed cannot be predicted at this time. As this regulatory trend continues, it could adversely affect our operations and, in turn, our financial results.

Asset management businesses have experienced a number of highly publicized regulatory inquiries which have resulted in increased scrutiny within the industry and new rules and regulations for mutual funds, investment advisors and broker-dealers. Some of our wholly owned subsidiaries are registered as an investment advisor with the SEC and the regulatory scrutiny and rulemaking initiatives may result in an increase in operational and compliance costs or the assessment of significant fines or penalties against our asset management business, and may otherwise limit our ability to engage in certain activities. It is impossible

Index

to determine the extent of the impact of any new laws, regulations or initiatives that may be proposed, or whether any of the proposals will become law. Compliance with any new laws or regulations could make compliance more difficult and expensive and affect the manner in which we conduct business. Pursuant to the Dodd-Frank Act, the SEC was charged with considering whether broker-dealers should be subject to a standard of care similar to the fiduciary standard applicable to registered investment advisors. It is not clear whether the SEC will determine that a heightened standard of conduct should be applicable to broker-dealers; however, any such standard, if mandated, would likely require us to review our product and service offerings and result in changes to these, and require that we incur additional regulatory costs in order to ensure compliance.

In addition, in recent years, the U.S. and other governments have taken actions, and may continue to take further actions, including expanding current or enacting new standards, requirements and rules that may be applicable to us and our subsidiaries and in particular our investment management business. For example, several states and municipalities in the United States have recently adopted “pay-to-play” rules, which could limit our ability to charge advisory fees, and could therefore affect the profitability of that portion of our business. In addition, the use of “soft dollars,” where a portion of commissions paid to broker-dealers in connection with the execution of trades also pays for research and other services provided to advisors, is periodically reexamined and may in the future be limited or modified. Although a substantial portion of the research relied on by our investment management business in the investment decision making process is generated internally by our investment analysts, external research, including external research paid for with soft dollars, is important to the process. This external research generally is used for information gathering or verification purposes, and includes broker-provided research, as well as third party provided databases and research services. If the use of soft dollars is limited, we may have to bear some of these costs. Furthermore, new regulations regarding the management of hedge funds and the use of certain investment products may impact our investment management business and result in increased costs. For example, many regulators around the world adopted disclosure and reporting requirements relating to the hedge fund businesses or other businesses, and changes to the laws, rules and regulations in the U.S. related to the over-the-counter swaps and derivatives markets require additional registration, recordkeeping and reporting obligations.

See the section entitled “Business - Regulation” within Item 1 in this report for additional information regarding our regulatory environment and Item 7A, “Quantitative and Qualitative Disclosures about Market Risk,” in this report regarding our approaches to managing regulatory risk. Regulatory actions brought against us may result in judgments, settlements, fines, penalties or other results adverse to us, which could have a material adverse effect on our business, financial condition or results of operations.

RJ Bank is subject to the CRA and fair lending laws, and failure to comply with these laws could lead to penalties.

The CRA, the Equal Credit Opportunity Act, the Fair Housing Act, and other fair lending laws and regulations impose nondiscriminatory lending requirements on financial institutions. The U.S. Department of Justice and other federal agencies, including the CFPB, are responsible for enforcing these laws and regulations. A successful challenge to an institution’s performance under the CRA or fair lending laws and regulations could result in a wide variety of sanctions, including the required payment of damages and civil money penalties, injunctive relief, imposition of restrictions on mergers and acquisitions activity, and restrictions on expansion activity. Private parties may also have the ability to challenge an institution’s performance under fair lending laws in private class action litigation.

Item 1B. UNRESOLVED STAFF COMMENTS

Not applicable.

Item 2. PROPERTIES

The RJF headquarters is located on approximately 55 acres of land within the Carillon Office Park in St. Petersburg, Florida. The RJF headquarters complex currently includes four main buildings which encompass a total of approximately 878,000 square feet of office space, the RJ Bank building which is a 44,000 square foot two-story building, and two five-story parking garages. At this St. Petersburg, Florida location, we also have the rights necessary to add approximately 490,000 square feet of new office space. We also utilize 30,000 square feet of leased warehouse space near the headquarters complex. During fiscal year 2011, we entered into an agreement to purchase approximately 65 acres of land located in Pasco County, Florida. As of September 30, 2014, the completion of this purchase transaction is subject to the satisfactory resolution of certain permitting matters. We conduct certain operations from our 85,000 square-foot office building located on 13 acres of land we own in Southfield, Michigan, and we operate a 40,000 square foot information technology data center on land we own in the Denver, Colorado area. We also conduct certain operations in approximately 237,000 square feet of leased office space in the 21-story Raymond James Tower located in downtown Memphis, Tennessee.

RJ Ltd. leases premises for its main offices in Vancouver, Calgary and Toronto and for branch offices throughout Canada. These leases have various expiration dates through 2026. RJ Ltd. does not own any land or buildings.

Index

We conduct branch office operations in various locations throughout the U.S. and in certain foreign countries. With the exception of a company-owned RJ&A branch office building in Crystal River, Florida, and certain interests in real estate holdings held under Morgan Properties, LLC which are insignificant in the aggregate, RJ&A branches are leased from third parties under leases that contain various expiration dates through 2024.

See Note 21 of the Notes to Consolidated Financial Statements in this Form 10-K for further information on our lease commitments.

Leases for branch offices of RJFS, the independent contractors of RJ Ltd., and RJIS, are the responsibility of the respective independent contractor financial advisors.

Item 3. LEGAL PROCEEDINGS

Pre-Closing Date Morgan Keegan matters (all of which are subject to indemnification by Regions)

In July 2006, MK & Co. and a former MK & Co. analyst were named as defendants in a lawsuit filed by a Canadian insurance and financial services company, Fairfax Financial Holdings, and its American subsidiary in the Circuit Court of Morris County, New Jersey. Plaintiffs made claims under a civil Racketeer Influenced and Corrupt Organizations (“RICO”) statute, for commercial disparagement, tortious interference with contractual relationships, tortious interference with prospective economic advantage and common law conspiracy. Plaintiffs alleged that defendants engaged in a multi-year conspiracy to publish and disseminate false and defamatory information about plaintiffs to improperly drive down plaintiff’s stock price, so that others could profit from short positions. Plaintiffs alleged that defendants’ actions damaged their reputations and harmed their business relationships. Plaintiffs alleged a number of categories of damages they sustained, including lost insurance business, lost financings and increased financing costs, increased audit fees and directors and officers insurance premiums and lost acquisitions, and have requested monetary damages. On May 11, 2012, the trial court ruled that New York law applied to plaintiff’s RICO claims, therefore the claims were not subject to treble damages. On June 27, 2012, the trial court dismissed plaintiffs’ tortious interference with prospective relations claim, but allowed other claims to go forward. A jury trial was set to begin on September 10, 2012. Prior to its commencement the court dismissed the remaining claims with prejudice. Plaintiffs have appealed the court’s rulings.

Certain of the Morgan Keegan entities, along with Regions, have been named in class-action lawsuits filed in federal and state courts on behalf of shareholders of Regions and investors who purchased shares of certain mutual funds in the Regions Morgan Keegan Fund complex (the “Regions Funds”). The Regions Funds were formerly managed by Morgan Asset Management (“MAM”), an entity which was at one time a subsidiary of one of the Morgan Keegan affiliates, but an entity which was not part of our Morgan Keegan acquisition (see information regarding the Morgan Keegan acquisition in Note 3 of the Notes to Consolidated Financial Statements in this Form 10-K). The complaints contain various allegations, including claims that the Regions Funds and the defendants misrepresented or failed to disclose material facts relating to the activities of the funds. In August 2013, the United States District Court for the Western District of Tennessee approved the settlement of the class action and the derivative action regarding the closed end funds for \$62 million and \$6 million, respectively. No class has been certified. Certain of the shareholders in the funds and other interested parties have entered into arbitration proceedings and individual civil claims, in lieu of participating in the class action lawsuits.

The states of Missouri and Texas are investigating alleged securities law violations by MK & Co. in the underwriting and sale of certain municipal bonds. An enforcement action was brought by the Missouri Secretary of State in April 2013, seeking monetary penalties and other relief. In November 2013, the state dismissed this enforcement action and refiled the same claims as a civil action in the Circuit Court for Boone County, Missouri. Civil actions were brought

by certain investors of the bonds beginning in March 2012, seeking a return of their investment and unspecified compensatory and punitive damages. A punitive class action was brought on behalf of purchasers of the bonds on September 4, 2012, seeking unspecified compensatory and punitive damages. This action was certified as a class action representing all purchasers of the bonds between July 23, 2010 and September 30, 2011. These actions are in various stages of litigation.

Prior to the Closing Date, Morgan Keegan was involved in other litigation arising in the normal course of its business. On all such matters, RJF is subject to indemnification from Regions pursuant to the terms of the stock purchase agreement.

Index

Indemnification from Regions

As more fully described in Note 3 of the Notes to Consolidated Financial Statements in this Form 10-K, the SPA provides that Regions will indemnify RJF for losses incurred in connection with any legal proceedings pending as of the closing date or commenced after the closing date related to pre-closing matters. All of the pre-Closing Date Morgan Keegan matters described above are subject to such indemnification provisions. See Note 21 of the Notes to Consolidated Financial Statements in this Form 10-K for additional information regarding Morgan Keegan's pre-Closing Date legal matter contingencies.

Other matters unrelated to Morgan Keegan

We are a defendant or co-defendant in various lawsuits and arbitrations incidental to our securities business, matters which are unrelated to the pre-Closing Date activities of Morgan Keegan. We are contesting the allegations in these cases and believe that there are meritorious defenses in each of these lawsuits and arbitrations. In view of the number and diversity of claims against us, the number of jurisdictions in which litigation is pending and the inherent difficulty of predicting the outcome of litigation and other claims, we cannot state with certainty what the eventual outcome of pending litigation or other claims will be. In the opinion of management, based on current available information, review with outside legal counsel, and consideration of amounts provided for in the accompanying consolidated financial statements with respect to these matters, ultimate resolution of these matters will not have a material adverse impact on our financial position or cumulative results of operations. However, resolution of one or more of these matters may have a material effect on the results of operations in any future period, depending upon the ultimate resolution of those matters and upon the level of income for such period.

See Note 21 of the Notes to Consolidated Financial Statements in this Form 10-K for additional information regarding legal matter contingencies.

PART II

Item MARKET FOR REGISTRANT'S COMMON EQUITY, RELATED SHAREHOLDER MATTERS AND
5. ISSUER PURCHASES OF EQUITY SECURITIES

Our common stock is traded on the NYSE under the symbol "RJF." At November 19, 2014, there were approximately 21,000 holders of our common stock. Our transfer agent is Computershare Inc. whose address is P.O. Box 30170, College Station, TX 77842-3170.

The following table sets forth for the periods indicated the high and low trades for our common stock:

	Fiscal year			
	2014		2013	
	High	Low	High	Low
First quarter	\$52.47	\$40.01	\$39.99	\$36.26
Second quarter	\$56.31	\$48.13	\$48.22	\$39.23
Third quarter	\$56.32	\$47.49	\$46.73	\$39.31
Fourth quarter	\$56.61	\$48.91	\$45.55	\$41.11

Cash dividends per share of common stock paid during the quarter are reflected below. The dividends were declared during the quarter preceding their payment.

	Fiscal year	
	2014	2013
First quarter	\$0.14	\$0.13

Second quarter	\$0.16	\$0.14
Third quarter	\$0.16	\$0.14
Fourth quarter	\$0.16	\$0.14

On August 20, 2014, our Board of Directors declared a quarterly dividend of \$0.16 in cash per share of common stock which was paid on October 15, 2014. Additionally, on November 20, 2014, our Board of Directors declared a quarterly dividend of \$0.18 in cash per share of common stock, to be paid January 15, 2015 to shareholders of record on January 2, 2015.

See Note 26 of the Notes to Consolidated Financial Statements in this Form 10-K for information regarding our intentions for paying cash dividends and the related capital restrictions.

Index

The following table presents information on our purchases of our own stock, on a monthly basis, for the twelve month period ended September 30, 2014:

	Number of shares purchased ⁽¹⁾	Average price per share
October 1, 2013 – October 31, 2013	11,890	\$43.16
November 1, 2013 – November 30, 2013	68,503	48.38
December 1, 2013 – December 31, 2013	24,774	48.48
First quarter	105,167	\$47.82
January 1, 2014 – January 31, 2014	1,427	\$52.18
February 1, 2014 – February 28, 2014	16,423	52.06
March 1, 2014 – March 31, 2014	2,631	51.39
Second quarter	20,481	\$51.98
April 1, 2014 – April 30, 2014	8,602	\$55.31
May 1, 2014 – May 31, 2014	22,160	49.32
June 1, 2014 – June 30, 2014	277	49.71
Third quarter	31,039	\$50.98
July 1, 2014 – July 31, 2014	273	\$50.54
August 1, 2014 – August 31, 2014	8,505	54.60
September 1, 2014 – September 30, 2014	4,150	54.82
Fourth quarter	12,928	\$54.58
Fiscal year total	169,615	\$49.41

(1) We purchase our own stock in conjunction with a number of activities, each of which are described below.

We do not have a formal stock repurchase plan. As of September 30, 2014, there is \$49.4 million remaining on the current authorization of our Board of Directors for open market share repurchases (the “Share Repurchase Authorization”). Under the Share Repurchase Authorization, our Board of Directors has authorized specific dollar amounts for repurchases of our own stock at the discretion of our Board’s Securities Repurchase Committee. The decision to repurchase securities is subject to cash availability and other factors. Historically we have considered such purchases when the price of our stock approaches 1.5 times book value. We did not purchase any shares under the Share Repurchase Authorization during the year ended September 30, 2014.

Share purchases for the trust fund that was established and funded to acquire our common stock in the open market and used to settle restricted stock units granted as a retention vehicle for certain employees of our wholly owned Canadian subsidiaries (see Note 2 and Note 11 of the Notes to Consolidated Financial Statements in this Form 10-K for more information on this trust fund) amounted to 17,668 shares for a total of \$850 thousand, for the fiscal year ended September 30, 2014. These share purchases are not subject to the Share Repurchase Authorization.

We also repurchase shares when employees surrender shares as payment for option exercises or withholding taxes. During the fiscal year ended September 30, 2014, there were 151,947 shares surrendered to us by employees for a total of \$7.5 million as payment for option exercises or withholding taxes. These share purchases are not subject to the Share Repurchase Authorization.

Index

Item 6. SELECTED FINANCIAL DATA

	Year ended September 30,				
	2014	2013	2012	2011	2010
	(in thousands, except per share data)				
Operating results:					
Total revenues	\$4,965,460	\$4,595,798	\$3,897,900	\$3,399,886	\$2,979,516
Net revenues	\$4,861,369	\$4,485,427	\$3,806,531	\$3,334,056	\$2,916,665
Net income attributable to RJF	\$480,248	\$367,154	\$295,869	\$278,353	\$228,283
Net income per share - basic	\$3.41	\$2.64	\$2.22	\$2.20	\$1.83
Net income per share - diluted	\$3.32	\$2.58	\$2.20	\$2.19	\$1.83
Weighted-average common shares outstanding - basic	139,935	137,732	130,806	122,448	119,335
Weighted-average common and common equivalent shares outstanding - diluted	143,589	140,541	131,791	122,836	119,592
Cash dividends per common share - declared	\$0.64	\$0.56	\$0.52	\$0.52	\$0.44
Financial condition:					
Total assets	\$23,325,652	\$23,186,122	\$21,160,265	\$18,006,995	\$17,883,081 ⁽¹⁾
Long-term obligations:					
Non-current portion of other borrowings ⁽²⁾	\$500,216	\$5,000	\$—	\$—	\$—
Non-current portion of loans payable of consolidated variable interest entities ⁽³⁾	\$25,928	\$43,877	\$62,938	\$78,650	\$63,660
Non-current portion of corporate debt	\$1,186,750	\$1,190,978	\$1,322,576	\$602,127	\$352,709
Total long-term debt	\$1,712,894	\$1,239,855	\$1,385,514	\$680,777	\$416,369
Equity attributable to Raymond James Financial, Inc.	\$4,141,236	\$3,662,924	\$3,268,940	\$2,587,619	\$2,302,816
Shares outstanding ⁽⁴⁾	140,836	138,750	136,076	123,273	121,041
Book value per share at end of year	\$29.40	\$26.40	\$24.02	\$20.99	\$19.03
Tangible book value per share at end of year (a non-GAAP measure) ⁽⁵⁾	\$26.98	\$23.86	\$21.42	\$20.45	\$18.49

Total assets at September 30, 2010 include \$3.1 billion in qualifying assets, offset by \$2.4 billion in overnight (1) borrowings and \$700 million in additional RJBDEP deposits to meet point-in-time regulatory balance sheet composition requirements related to RJ Bank's qualifying as a thrift institution at such time.

(2) At September 30, 2014, the outstanding balance is primarily comprised of RJ Bank's borrowings from the Federal Home Loan Bank ("FHLB").

(3) Loans payable of consolidated variable interest entities ("VIE") are non-recourse to us.

(4) Excludes non-vested shares.

(5) This non-GAAP measure is computed by dividing shareholders' equity, less goodwill and other identifiable intangible assets, net of their related deferred tax balances (which are \$13 million, \$9 million, \$8 million and \$6 million as of September 30, 2014, 2013, 2012 and 2011 respectively), by the number of shares outstanding. Management believes tangible book value per share is a measure that is useful to assess capital strength and that

the GAAP and non-GAAP measures should be considered together.

Item 7. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

The following Management's Discussion and Analysis ("MD&A") is intended to help the reader understand the results of our operations and financial condition. The MD&A is provided as a supplement to, and should be read in conjunction with, our consolidated financial statements and accompanying notes to consolidated financial statements. Where "NM" is used in various percentage change computations, the computed percentage change has been determined not to be meaningful.

Executive overview

We operate as a financial services and bank holding company. Results in the businesses in which we operate are highly correlated to the general overall strength of economic conditions and, more specifically, to the direction of the U.S. equity and fixed income markets, the corporate and mortgage lending markets and commercial and residential credit trends. Overall market conditions, interest rates, economic, political and regulatory trends, and industry competition are among the factors which could affect us and which are unpredictable and beyond our control. These factors affect the financial decisions made by market participants which include investors, borrowers, and competitors, impacting their level of participation in the financial markets. These factors also impact the level of public offerings, trading profits, interest rate volatility and asset valuations, or a combination thereof. In turn, these decisions and factors affect our business results.

Year ended September 30, 2014 compared with the year ended September 30, 2013

For the fifth consecutive year, we achieved record net revenues of \$4.9 billion, a \$376 million or 8%, increase compared to the prior year. The increase generated by our on-going operations is even greater than that amount after factoring in the \$74 million of revenue reflected in the prior year that was associated with a private equity investment we sold last year. All four operating segments achieved record levels of net revenues, the fifth straight year for our Private Client Group and Capital Markets segments. Total client assets under administration increased to \$475 billion at September 30, 2014, a 12% increase over the prior year level.

We also achieved a record level of net income, to \$480 million, an increase of \$113 million, or 31%, compared to the prior year. Three of our four operating segments achieved record levels of profitability. Fully diluted earnings per share of \$3.32, increased \$0.74, or 29%, over the prior year amount. After excluding the acquisition related and other one-time expenses we incurred in the prior year, our adjusted net income increased \$61 million, or 15%, compared to the prior year period (a non-GAAP measure).⁽¹⁾ The increase in net income over the prior year level is even more significant given that the prior year net income included \$14 million (after the attribution to noncontrolling interests) arising from our indirect investment in Albion Medical Holdings, Inc. ("Albion"), a private equity holding which was sold during the prior year.

Non-interest expenses increased \$254 million, or 7%, compared to the prior year. The increase is primarily due to the increase in compensation, commissions and benefits expenses which were partially offset by the decrease in acquisition related expenses. Acquisition and integration related expenses in fiscal year 2014 are no longer material for separate reporting since our integration of Morgan Keegan was substantially complete as of September 30, 2013. The combination of increasing net revenues and overall expense control in fiscal year 2014 helped us achieve a 15.4% pre-tax margin on net revenues.

A summary of the most significant items impacting our financial results as compared to the prior year are as follows:

Our Private Client Group segment generated record net revenues of \$3.3 billion, a 12% increase, while pre-tax income increased \$100 million, or 43%, to a record \$330 million. The increase in revenues is primarily attributable to increased securities commissions and fee revenues, predominately arising from fee-based accounts, as well as an increase in mutual fund and annuity service fee revenues. Commission expenses increased in proportion to the increase in corresponding commission revenues while all other components of non-interest expense increased by only 1%. Client assets under administration of the Private Client Group increased 12% over the prior year level, to \$450.6 billion at September 30, 2014. Net inflows of client assets have been positively impacted by successful recruiting of financial advisors, among other favorable factors.

(1) Refer to the discussion and reconciliation of the GAAP results to the non-GAAP results in the “Reconciliation of the GAAP results to the non-GAAP measures” section of this MD&A.

Index

The Capital Markets segment generated record net revenues of \$966 million, a 3% increase, while pre-tax income increased \$28 million, or 28%, to a record \$131 million. Increases in trading profits, merger and acquisition fee revenues, equity underwriting fee revenues and institutional sales commissions on equity products more than offset a decline in institutional sales commissions on fixed income products. The decline in institutional fixed income commission revenues results from challenging fixed income market conditions during the fiscal year due to economic uncertainty, historically low interest rates, relatively low volatility of benchmark interest rates, and decreased customer trading volumes.

Our Asset Management segment generated record net revenues of \$370 million, a 26% increase, while pre-tax income increased \$32 million, or 33%, to a record \$128 million. Financial assets under management increased 15% from the prior year, to \$64.6 billion as of September 30, 2014. Both strong net inflows of client assets and market appreciation contributed to the increase. We also earned nearly \$10 million in performance fees in the current year (compared to nearly \$2 million in the prior year) as a result of positive net performance from certain of our managed funds (a portion of which are attributable to noncontrolling interests), which contributed to the increase in revenues and pre-tax income.

RJ Bank generated record net revenues of \$352 million, a 1% increase, while pre-tax income decreased \$25 million, or 9%, to \$243 million. Net interest income increased due to growth in average loans outstanding, offset in large part by a lower net interest margin. The provision for loan losses increased primarily as the result of significant loan portfolio growth, partially offset by decreases resulting from improved credit characteristics of the loan portfolio reflecting the positive impact from improved economic conditions. Non-interest expenses (excluding the provision for loan losses) increased \$19 million.

Activities in our Other segment resulted in a pre-tax loss that is \$48 million less than the prior year. Our non-interest expenses decreased substantially as we are no longer incurring acquisition and integration related costs since our integration of Morgan Keegan was substantially complete as of September 30, 2013. In addition, the prior year included significant revenues and pre-tax income associated with our indirect investment in Albion, which was sold in April 2013, thus having a significant impact on comparisons to the prior year.

Our fiscal year 2014 effective tax rate is 35.8%, up from the 34.9% in fiscal year 2013. Our fiscal year 2013 effective tax rate included a nonrecurring tax benefit resulting from a change in management's repatriation strategy of certain foreign earnings. Both years included significant non-taxable gains in the value of our company-owned life insurance portfolio.

The regulatory environment in which we operate our businesses continues to produce changes that result from new rules and additional regulations that could impact our businesses in the future. That being the case, our current view of the potential impact to us of future regulations remains substantially unchanged by the regulatory activities that occurred during the year. Based on our continuing review of the Dodd-Frank Act, and because of the nature of our businesses and our business practices, we presently do not expect the legislation to have a significant direct impact on our operations as a whole. However, because some of the implementing regulations either have yet to be adopted, have yet to become effective, or are under further analysis by various regulatory agencies, the specific impact on some of our businesses remains uncertain.

Index

Year ended September 30, 2013 compared with the year ended September 30, 2012

We achieved record net revenues of \$4.5 billion in fiscal year 2013, a \$679 million, or 18%, increase compared to the prior year. All four operating segments achieved record net revenues and pre-tax earnings. Revenues were higher in fiscal year 2013 in part because the results include twelve months of Morgan Keegan operations as compared to six months in fiscal year 2012. In addition, fiscal year 2013 net revenues include a \$65 million gain on a proprietary capital investment (a \$22.7 million impact to RJF net revenues after noncontrolling interests), which further elevated our revenues.

Our pre-tax income increased \$93 million in fiscal year 2013, or 20%, compared to the prior year, to \$564 million. Excluding the acquisition related expenses primarily resulting from the Morgan Keegan acquisition, in fiscal year 2013 we generated adjusted pre-tax income of \$644 million (a non-GAAP measure)⁽¹⁾, a 21% increase over the prior year. Earnings per share in fiscal year 2013 increased 17% over the prior year, to \$2.58 per share. Excluding the acquisition related expenses mentioned above, fiscal year 2013 adjusted earnings per share (a non-GAAP measure)⁽¹⁾ increased 18%, to \$2.95 per share.

All of our operating segments performed well during fiscal year 2013, as each achieved record levels of pre-tax income. Total client assets under administration were a record \$425.4 billion at September 30, 2013, a 10% increase over the prior year level. Non-interest expenses in fiscal year 2013 increased \$553 million, or 17%, primarily as a result of the inclusion of a full year of expenses from legacy Morgan Keegan businesses. Increases in compensation related expenses, information technology expenses, and acquisition related expenses were partially offset by a decrease in the bank loan loss provision.

Significant milestones achieved in fiscal year 2013 include the mid-February 2013 transfer of all of the Morgan Keegan financial advisors and client accounts from the Morgan Keegan platform to the RJ&A platform. Following that conversion and allowing time for the former Morgan Keegan financial advisors to become proficient in the use of the RJ&A platform, in the June 2013 quarter we implemented staff reductions. These reductions occurred mainly within our information technology groups where there was significant overlap in historic Morgan Keegan and RJ&A support staffing that we had elected to maintain through the platform conversion date in order to ensure the continued high levels of service to financial advisors and clients while we operated on two different platforms. Retention levels remain very high for the legacy Morgan Keegan financial advisors. The Morgan Keegan Capital Markets businesses were also integrated (primarily fixed income and public finance investment banking) during fiscal year 2013, and further staff reductions were made. Given these accomplishments, as of September 30, 2013 our various Morgan Keegan integration initiatives have been substantially and successfully completed.

A summary of the most significant items impacting our financial results in fiscal year 2013 compared to the prior year, in addition to the impact of twelve months of Morgan Keegan operations in fiscal year 2013 compared to six months in the prior year, are as follows:

Our Private Client Group segment generated net revenues of \$2.9 billion in fiscal year 2013, an 18% increase, while pre-tax income increased 7% to \$230 million. The increase in revenues is primarily attributable to increased securities commissions and fee revenues, predominately arising from fee-based accounts. Pre-tax income in fiscal year 2013 was negatively impacted by an increase in commission expenses (driven primarily by the increase in corresponding commission revenues) as well as an increase in communication and information processing expense. Client assets under administration of the Private Client Group increased 9% over the prior year, to \$402.6 billion at September 30, 2013.

¶The Capital Markets segment generated net revenues of \$938 million in fiscal year 2013, a 15% increase, while pre-tax income increased 35% to \$102 million. We experienced significant increases in institutional fixed income

commission revenues, merger and acquisition fees, and fixed income investment banking revenues. Equity capital markets commission levels increased as a result of improved equity market conditions. Results from our equity capital markets investment banking business were uneven throughout fiscal year 2013, characterized by intermittent periods of significant activity, and ending the year with strong results. Our fixed income operations improved overall, but were negatively impacted during times of adverse fixed income market conditions. These adverse conditions resulted from medium and longer term interest rate volatility, which negatively impacted our trading results.

Our Asset Management segment generated revenues of \$293 million in fiscal year 2013, a 23% increase, while pre-tax income increased 43% to \$96 million. Assets under management in managed programs increased 31% to a record \$56 billion as of September 30, 2013. Strong net inflows of client assets in managed programs, including from legacy MK & Co. branches, market appreciation, and our acquisition of an interest in ClariVest, contributed to the increase.

(1) Refer to the discussion and reconciliation of the GAAP results to the non-GAAP results in the “Reconciliation of the GAAP results to the non-GAAP measures” section of this MD&A.

Index

RJ Bank generated \$268 million in pre-tax income in fiscal year 2013, an 11% increase over the prior year. The increase resulted primarily from the significant decrease in the loan loss provision expense and an increase in net interest income. The decrease in the loan loss provision expense resulted from an improved credit environment, the favorable resolution of certain problem loans, and a significant reduction in residential mortgage delinquent loans. The increase in net interest income was primarily the result of an increase in average loans outstanding.

In our non-operating Other segment, our fiscal year 2013 results reflect a \$6 million increase in our pre-tax loss. This segment includes certain corporate expenses, our principal capital and our private equity activities. Our results were favorably impacted by the sale of our indirect investment in Albion in April, 2013. The Albion investment generated an increase of \$18 million in pre-tax income (net of noncontrolling interests). We also experienced other less significant increases on other investments in our private equity portfolio. Those increases were more than offset by additional acquisition and integration related costs incurred from the Morgan Keegan acquisition, and a full year's interest expense associated with debt financings executed in March 2012 to finance a portion of the acquisition.

Our earnings benefited from a favorable effective tax rate in fiscal year 2013. Our effective tax rate in fiscal year 2013 decreased to 34.9% from 37.3% in fiscal year 2012. The tax rate decrease primarily resulted from a nonrecurring tax benefit resulting from a change in management's repatriation strategy of certain foreign earnings as well as a significant increase in nontaxable income associated with the change in market value of company-owned life insurance.

Reconciliation of the GAAP results to the non-GAAP measures

We believe that the non-GAAP measures provide useful information by excluding material items that may not be indicative of our core operating results and that the GAAP and the non-GAAP measures should be considered together. There are no non-GAAP adjustments in the year ended September 30, 2014, as we no longer separately

report acquisition and integration related costs since our integration of Morgan Keegan was substantially complete as of September 30, 2013. The non-GAAP adjustments for the prior year periods presented are comprised of the one-time acquisition and integration costs incurred (primarily associated with the Morgan Keegan acquisition) and other non-recurring expenses, net of applicable taxes. Refer to the footnotes to the following table for further explanation of each non-recurring item.

Index

The following table provides a reconciliation of the GAAP basis to the non-GAAP measures:

	Year ended September 30,	
	2013	2012
	(\$ in thousands, except per share amounts)	
Net income attributable to RJF, Inc. - GAAP basis	\$367,154	\$295,869
Non-GAAP adjustments:		
Acquisition related expenses ⁽¹⁾	73,454	59,284
RJF's share of RJES goodwill impairment expense ⁽²⁾	4,564	—
RJES restructuring expense ⁽³⁾	1,902	—
Interest expense ⁽⁴⁾	—	1,738
Pre-tax non-GAAP adjustments	79,920	61,022
Tax effect of non-GAAP adjustments ⁽⁵⁾	(27,908) (22,731
Adjusted net income attributable to RJF, Inc. - Non-GAAP basis	\$419,166	\$334,160
Non-GAAP adjustments to common shares outstanding:		
Effect of the February 2012 share issuance on weighted average common shares outstanding ⁽⁶⁾	—	(1,396
Non-GAAP earnings per common share:		
Non-GAAP basic	\$3.01	\$2.53
Non-GAAP diluted	\$2.95	\$2.51
Average equity - GAAP basis ⁽⁷⁾	\$3,465,323	\$3,037,789
Average equity - non-GAAP basis ⁽⁸⁾	\$3,483,531	\$3,027,259
Return on equity	10.6	% 9.7
Return on equity - non-GAAP basis ⁽⁹⁾	12.0	% 11.0

(1) The non-GAAP adjustment adds back to pre-tax income one-time acquisition and integration expenses associated with acquisitions that were incurred during each respective fiscal year.

(2) The non-GAAP adjustment adds back to pre-tax income RJF's share of the total goodwill impairment expense associated with our RJES reporting unit.

(3) The non-GAAP adjustment adds back to pre-tax income restructuring expenses associated with our RJES operations.

(4) The non-GAAP adjustment adds back to pre-tax income the incremental interest expense incurred during the March 31, 2012 quarter on debt financings that occurred in March 2012, prior to and in anticipation of, the closing of the Morgan Keegan acquisition.

(5) The non-GAAP adjustment reduces net income for the income tax effect of all the pre-tax non-GAAP adjustments, utilizing the effective tax rate applicable to the respective year.

(6) The non-GAAP adjustment to the weighted average common shares outstanding in the basic and diluted non-GAAP earnings per share computation reduces the actual shares outstanding for the effect of the 11,075,000 common shares issued by RJF in February 2012 as a component of our financing of the Morgan Keegan acquisition.

(7) Computed by adding the total equity attributable to RJF, Inc. as of each quarter-end date during the indicated fiscal year, plus the beginning of the year total, divided by five.

(8) The calculation of non-GAAP average equity includes the impact on equity of the non-GAAP adjustments described in the table above, as applicable for each respective year.

Computed by utilizing the adjusted net income attributable to RJF, Inc.-non-GAAP basis and the average (9) equity-non-GAAP basis, for each respective year. See footnotes (7) and (8) above for the calculation of average equity-non-GAAP basis.

Index

Net interest analysis

We have certain assets and liabilities, not only held in our RJ Bank segment but also held in our PCG, Capital Markets and Other segments, which are subject to changes in interest rates; these changes in interest rates have an impact on our overall financial performance. Given the relationship of our interest sensitive assets to liabilities held in each of these segments, an increase in short-term interest rates would result in an overall increase in our net earnings (we currently have more assets than liabilities with a yield that would be affected by a change in short-term interest rates). A gradual increase in short-term interest rates would have the most significant favorable impact on our PCG and RJ Bank segments (refer to the table in Item 7a - Interest Rate Risk in this report, which presents an analysis of RJ Bank's estimated net interest income over a 12 month period based on instantaneous shifts in interest rates using the asset/liability model applied by RJ Bank).

Based upon our latest analysis performed as of September 30, 2014, we estimate that a 100 basis point instantaneous rise in short-term interest rates would result in an increase in our pre-tax income of approximately \$150 million over a twelve month period. Approximately half of such an increase would be reflected in account and service fee revenues (resulting from an increase in the fees generated in lieu of interest income from our multi-bank sweep program with unaffiliated banks and the discontinuance of money market fee waivers) which are reported in the PCG segment, and the remaining portion of the increase would be reflected in net interest income reported primarily in our PCG and RJ Bank segments. This estimate is based on static balances as of September 30, 2014 and a conservative assumption related to interest credited to our clients on their cash balances in such an interest rate environment. The actual amount of any increase we would realize in the future will ultimately be based on a number of factors including, but not limited to, the actual change in balances, the rapidity and magnitude of the increase in interest rates, the competitive landscape at such time, and the returns on comparable investments which will factor into the interest rates we pay on client cash balances. The vast majority of any incremental benefit to pre-tax income from a rise in short-term interest rates would be expected to arise from the first 100 basis point increase, as we presume that a significant portion of any further incremental increase in short-term interest rates would be passed along to clients, and thus such additional interest revenues and interest sensitive fees would be offset by increases of similar amounts in our interest expense.

Index

Year ended September 30, 2014 compared with the year ended September 30, 2013 – Net Interest Analysis

Net interest income increased \$14 million, or 4%, compared to the prior year. Net interest income is earned primarily by our PCG and RJ Bank segments, which are discussed separately below.

Net interest income in the PCG segment increased \$4 million, or 5%, primarily resulting from the increase in margin interest rates we implemented as of October 1, 2013, offset by a slight decrease in average client margin balances outstanding.

The RJ Bank segment's net interest income increased \$8 million, or 2%, primarily as a result of an increase in loans outstanding offset by a decrease in net interest margin. Refer to the discussion of the specific components of RJ Bank's net interest income in the RJ Bank section of this MD&A.

Interest income earned on the available for sale securities portfolio decreased \$1 million, or 18%, from the prior year due to lower investment balances primarily resulting from sales and redemptions within the portfolio, and a slight decrease in yields (see Note 7 of our Notes to Consolidated Financial Statements in this Form 10-K for additional information on our available for sale securities).

Interest income earned on our trading instruments decreased \$2 million, or 11%, compared to the prior year due to lower average trading security inventory levels (see Note 6 of our Notes to Consolidated Financial Statements in this Form 10-K for additional information on our trading instruments).

Year ended September 30, 2013 compared with the year ended September 30, 2012 – Net Interest Analysis

Net interest income was relatively unchanged in fiscal year 2013 as compared to the prior year level. Net interest income is earned primarily by our PCG and RJ Bank segments, which are discussed separately below.

Net interest income in the PCG segment was also relatively unchanged in fiscal year 2013 as compared to the prior year. In the historically low rate interest environment that existed during fiscal year 2013, we earned a historically low interest spread on client cash balances, thus we experienced only a nominal favorable impact on our net interest revenues despite increases in client balances outstanding.

RJ Bank's net interest income in fiscal year 2013 increased \$17 million, or 5%, primarily as a result of an increase in average loans outstanding, partially offset by a decrease in net interest margin. Refer to the discussion of the specific components of RJ Bank's net interest income in the RJ Bank section of this MD&A.

Interest income earned on our available for sale securities portfolio in fiscal year 2013 decreased from the prior year due to significantly lower yields on the portfolio which more than offset the increase resulting from higher investment balances. The average balance of the portfolio increased primarily as a result of the ARS we acquired halfway through the prior year as a part of the Morgan Keegan acquisition. Given the significantly lower yields from these securities, the weighted-average yield on the total available for sale securities portfolio declined.

Interest expense on our senior notes in fiscal year 2013 increased approximately \$18 million over the prior year. The increase primarily results from our March 2012 issuances of \$350 million 6.9% senior notes and \$250 million 5.625% senior notes. Both of the March 2012 debt offerings were part of our acquisition financing activities and other transactions associated with the Morgan Keegan acquisition.

Revenues of the PCG segment are correlated with total PCG client assets under administration, which include assets in fee-based accounts, and the overall U.S. equities markets. PCG client asset balances are as follows as of the dates indicated:

	As of September 30,					
	2014	% change	2013	% change	2012	
	(\$ in billions)					
Total PCG assets under administration	\$450.6	12	% \$402.6	9	%	\$367.7

Edgar Filing: RAYMOND JAMES FINANCIAL INC - Form 10-K

PCG assets in fee-based accounts	\$167.7	20	%	\$139.9	21	%	\$115.7
----------------------------------	---------	----	---	---------	----	---	---------

Total PCG assets under administration increased 12% over September 30, 2013 primarily as a result of favorable equity markets and an increase net client inflows during fiscal year 2014. Total PCG assets in fee-based accounts increased 20% compared

42

Index

to September 30, 2013. Increased client assets under administration typically result in higher fee-based account revenues and mutual fund and annuity service fees. Improved equity markets not only result in increased assets under administration, but also generally lead to more client activity and therefore improved financial advisor productivity. Higher client cash balances generally lead to increased interest income and account fee revenues, depending upon the interest rates realized in our Client Interest Program and RJB DP.

The following table presents a summary of PCG financial advisors and the total number of PCG branch locations as of the periods indicated:

	Employees	Independent contractors	September 30, 2014 total	September 30, 2013 total
RJ&A	2,462	—	2,462	2,443
RJFS	—	3,329	3,329	3,275
RJ Ltd.	172	219	391	406
RJIS	—	83	83	73
Total financial advisors	2,634	3,631	6,265	6,197
Total branch locations			2,569	2,518

Year ended September 30, 2014 compared with the year ended September 30, 2013 – Private Client Group

Net revenues increased \$348 million, or 12%, to a record \$3.3 billion while pre-tax income increased \$100 million, or 43%, to a record \$330 million. PCG's pre-tax margin on net revenues increased to 10.1% as compared to 7.9% in fiscal year 2013.

Securities commissions and fees increased \$303 million, or 12%. The increase results predominately from growth in client assets under administration. The year over year increase in client assets was driven by the equity market conditions in the U.S., which were generally improved as compared to the prior year, and increased financial advisor productivity. The most significant increases in these revenues arose from revenues earned on fee-based accounts, which increased \$245 million, or 24%, and commission revenues on mutual fund products which increased \$57 million, or 9% (primarily due to increases in trailing commissions on mutual fund products), partially offset by a \$21 million, or 21%, decrease in commissions on fixed income products. Commission earnings on fixed income products decreased primarily due to historically low interest rates and a general lack of volatility of benchmark interest rates. Securities commissions and fee revenues generated by our Canadian operations increased 5% over the prior year.

Total account and service fee revenues increased \$44 million, or 13%, over the prior year. Mutual fund and annuity service fees increased \$44 million, or 26%, primarily as a result of an increase in mutual fund omnibus fees and education and marketing support ("EMS") fees (which include no-transaction-fee ("NTF") program revenues), all of which are paid to us by the mutual fund companies whose products we distribute. We continue to implement changes in the data sharing arrangements with many mutual fund companies, converting from a networking to an omnibus arrangement. The fees earned from omnibus arrangements are greater than those under networking arrangements in order to compensate us for the additional reporting requirements performed by the broker-dealer under omnibus arrangements. During fiscal year 2014, we implemented technology changes in our EMS program and standardized tiered service levels provided to many mutual fund companies, resulting in increased fees earned from EMS arrangements. In addition, effective with our mid-February 2013 platform integration, the former Morgan Keegan client mutual fund investments became eligible for our omnibus and EMS programs resulting in an increase in this fee revenue.

PCG net interest increased \$4 million, or 5%, primarily resulting from an increase in margin interest rates despite a slight decrease in average margin balances. Growth in margin loans in fiscal year 2014 has been negatively impacted

by the popularity of our securities based lending product offered by RJ Bank. As a result of the extremely low rate interest environment that existed during fiscal year 2014 and the related low net interest spreads earned, there was only a nominal impact on our net interest revenues resulting from changes in client cash balances. Refer to the discussion of how the pre-tax income of this segment could be favorably impacted by a 100 basis point instantaneous rise in short-term interest rates, in the net interest section of this MD&A.

Total segment revenues increased 12%. The portion of total segment revenues that we consider to be recurring is approximately 72% at September 30, 2014, as contrasted to 68% at September 30, 2013. Recurring commission and fee revenues include asset-based fees, trailing commissions from mutual funds and variable annuities/insurance products, mutual fund service fees, fees earned on funds in our multi-bank sweep program, and interest.

Index

Non-interest expenses increased \$248 million, or 9%, over the prior year. Sales commission expense increased \$237 million, or 13%, consistent with the 12% increase in commission and fee revenues. Business development expenses increased \$15 million, or 23%, due to increases in advertising, recruiting, incoming account transfer fee expenses, and conference costs.

Year ended September 30, 2013 compared with the year ended September 30, 2012 – Private Client Group

Net revenues in fiscal year 2013 increased \$445 million, or 18%, over the prior year, while pre-tax income increased \$15 million, or 7%. PCG's pre-tax margin on net revenues decreased to 7.9% as compared to 8.7% in fiscal year 2012.

A full year of MK & Co. private client group operations are included in the fiscal year 2013 results as compared to six months in fiscal year 2012. Therefore, comparisons of our legacy private client group operations to our fiscal year 2013 operations are not meaningful. As of mid-February 2013, all of the MK & Co. financial advisors and client accounts from the MK & Co. platform were transferred to, and integrated with, the RJ&A platform.

Securities commissions and fees in fiscal year 2013 increased \$399 million, or 19%. A significant portion of this increase resulted from our acquisition of Morgan Keegan on April 2, 2012, which brought over 900 financial advisors into PCG, 863 of whom were retained through the February 2013 integration of the Morgan Keegan operations into those of RJ&A. Securities commissions and fee revenues generated by our Canadian operations increased 6% over the prior year. Despite a small decrease in the total number of PCG financial advisors at September 30, 2013 compared to September 30, 2012, the average productivity per financial advisor for the same comparable period has increased 9%. Client assets under administration of \$402.6 billion in the PCG segment increased \$34.9 billion, or 9%, as compared to September 30, 2012, primarily resulting from equity market appreciation in the U.S.

Client account and service fee revenues in fiscal year 2013 increased \$13 million, or 9%, over the prior year. The increase primarily results from an increase in the fees we receive, in lieu of interest earnings, from our multi-bank sweep program. Balances in this program increased primarily as a result of the transfer of MK & Co. client accounts to the Raymond James program. Additional MK & Co. client accounts also resulted in an increase in service fee income, which increased as a result of the additional client account volume. In addition, we realized an increase in fees resulting from assets invested in alternative investment funds.

Mutual fund and annuity service fees in fiscal year 2013 increased \$32 million, or 23%, primarily as a result of an increase in mutual fund omnibus fees, EMS fees, and NTF program revenues, all of which are paid to us by the mutual fund companies whose products we distribute. In addition to an increase in the mutual fund assets on which these fees are generally paid, during fiscal year 2013 we implemented changes in the data sharing arrangements with many mutual fund companies, converting from a networking to an omnibus arrangement. The fees earned from omnibus arrangements are greater than those under networking arrangements in order to compensate us for the additional reporting requirements performed by the broker-dealer under omnibus arrangements. The offsetting increased costs we have incurred to third parties to provide the additional information is included in communications and information processing expenses discussed below. Effective with our mid-February 2013 platform integration, the former Morgan Keegan client mutual fund investments became eligible for our omnibus and EMS programs, further increasing this revenue.

Partially offsetting the increases in revenues described in the preceding two paragraphs, client transaction fees in fiscal year 2013 decreased \$5 million, or 21%, primarily as a result of certain mutual fund relationships converting during fiscal year 2013 to a NTF program and an April 2012 reduction in transaction fees associated with certain non-discretionary asset-based programs. Under the mutual fund NTF program, we receive increased fees from mutual fund companies which are included within mutual fund and annuity service fee revenue described above, but our clients no longer pay us transaction fees on mutual fund trades within certain of our managed programs.

Other revenues in fiscal year 2013 increased by \$5 million, or 21%, primarily as a result of spreads earned on cross-currency transactions within our Canadian operations.

Total segment revenues in fiscal year 2013 increased 18%. The portion of total segment revenues that we consider to be recurring is approximately 68% at September 30, 2013, as contrasted to the September 30, 2012 level of 64%. Recurring commission and fee revenues include asset-based fees, trailing commissions from mutual funds and variable annuities/insurance products, mutual fund service fees, fees earned on funds in our multi-bank sweep program, and interest. Assets in fee-based accounts as of September 30, 2013 were \$139.9 billion (a majority of which is included in our asset management programs) an increase of 21% as compared to the \$115.7 billion of assets in fee-based accounts at September 30, 2012.

The amount of net interest in the PCG segment in fiscal year 2013 was nearly unchanged from the prior year level. Increases in client margin balances and client cash balances outstanding over the year were nearly completely offset by further decreases

Index

in interest rates. As a result of the extremely low rate interest environment that existed during fiscal year 2013, there was only a nominal impact on our net interest revenues resulting from the client cash balance increase as the interest spread earned on client balances were at historically low levels.

Non-interest expenses in fiscal year 2013 increased \$430 million, or 19%, over the prior year. Sales commission expense increased \$275 million, or 18%, consistent with the 19% increase in commission and fee revenues. Administrative and incentive compensation expenses increased \$61 million, or 14%. This increase resulted primarily from the impact of a full year of salaries and benefits expense associated with the increased support staff and information technology and operations headcount arising from the addition of the Morgan Keegan associates.

Communications and information processing expense in fiscal year 2013 increased \$49 million, or 43%. Computer software development costs and other information technology related costs, which include consulting expenses, increased over \$42 million as compared to the prior year as a result of various information technology enhancements to existing platforms, costs associated with operating two platforms for a portion of the year, additional reporting requirements including regulatory requirements, and expenses associated with omnibus arrangements (refer to the increase in mutual fund and annuity service fee revenue arising from these arrangements discussed above).

Occupancy and equipment expense in fiscal year 2013 increased \$18 million, or 19%, primarily due to a full year's rent and other facility related expenses associated with the increase of approximately 140 branch office locations resulting from the Morgan Keegan acquisition.

Clearance and other expenses in fiscal year 2013 increased \$27 million, or 38%. These expense increases can generally be attributed to clearing and floor brokerage expenses resulting from the additional volume of client accounts and transactions arising from the Morgan Keegan acquisition, growth in our legacy operations, and the application of differing clearing charge allocation methodologies between segments than within the historic MK & Co. operations, which impacts prior year comparisons.

Year ended September 30, 2014 compared with the year ended September 30, 2013 – Capital Markets

Net revenues increased \$28 million, or 3%, while pre-tax income increased \$28 million, or 28%.

Institutional equity sales commissions increased \$14 million, or 6%, resulting from both favorable equity markets throughout the year, and an active new issue market environment at certain times during fiscal year 2014. The active new issue market resulted in a 14% increase in equity underwriting fee revenues to \$100 million. Underwriting fee revenues increased in both our domestic as well as our Canadian equity capital markets operations. The sectors in which we generated the most significant amounts of underwriting fee revenues in fiscal year 2014 were real estate, financial services and energy.

Institutional fixed income sales commissions decreased \$81 million, or 25%, primarily due to the challenging fixed income market conditions throughout fiscal year 2014 resulting from economic uncertainty, the continuation of historically low interest rates, periods of relatively low volatility of benchmark interest rates, and the resulting decreased customer trading volumes. Despite such conditions, trading results were solid and steady during the year, resulting in a \$32 million, or 112%, improvement over the

Index

prior year, which included a quarter (the third quarter of fiscal year 2013) which was particularly negative. These trading profits are generated primarily from fixed income securities. These favorable trading results in fiscal year 2014 were achieved even as we continued to maintain relatively lower average balances of trading securities in response to the market uncertainty (refer to the table of average interest earning asset and liability balances in the net interest section of this MD&A for information on our average levels of trading instruments held during each respective year).

Merger and acquisitions and advisory fee revenues increased \$24 million, or 19%, compared to the prior year. The current year includes increases in revenues in both our domestic and Canadian operations. The sectors in which we generated the most significant amounts of such fee revenues in fiscal year 2014 were technology services, healthcare, energy, financial services, technology, and general industrials.

Tax credit fund syndication fee revenues increased by \$10 million, or 40%, due to a 16% increase in the volume of tax credit fund partnership interests sold during the current year and current year recognition of certain revenues that were associated with partnership interests sold in prior years which had been deferred in those years. Current year recognition of these previously deferred revenues result from the favorable resolution of certain conditions associated with the partnership interests which, once favorably resolved, result in the recognition of previously deferred revenues.

Non-interest expenses increased \$10 million, or 1%, compared to the prior year. Administrative and incentive compensation and benefit expense increased \$25 million, or 6%, compared to the prior year offset by a decrease in sales commission expense of \$30 million, or 13%, which is directly correlated with the 12% decrease in overall institutional sales commission revenues. Incentive compensation expense increases are primarily the result of higher volumes of underwriting, mergers & acquisitions and advisory fees, investment banking and tax credit fund syndication fee revenues, as well as to a lesser extent, annual salary increases applicable to all of our operations. The prior year included goodwill impairment expense of \$7 million related to our RJES operations which did not recur in the current year.

Losses of real estate partnerships held by consolidated VIEs result directly from the consolidation of certain low-income housing tax credit funds, and reflect an increase of \$15 million, or 57%, over the prior year. Since we only hold an insignificant interest in these consolidated funds, nearly all of these losses are attributable to others and are therefore included in the offsetting noncontrolling interests. Refer to Note 11 of the Notes to Consolidated Financial Statements in this Form 10-K for further information on the consolidation of VIEs.

Noncontrolling interests includes the impact of consolidating certain low-income housing tax credit funds, which impacts other revenue, interest expense, and the losses of real estate partnerships held by consolidated VIEs (as described in the preceding paragraph), and RJES for the first six months of the prior year period (thereafter, we acquired the interests previously held by others), and reflects the portion of these consolidated entities which we do not own. Total segment expenses attributable to others increased by \$10 million compared to the prior year. The increase in expenses associated with noncontrolling interests resulting from losses of real estate partnerships held by consolidated VIEs discussed above, are offset by the impact of the prior year consolidation of RJES. As a result of our April 2013 acquisition of the RJES interest previously held by others, there is no comparable noncontrolling interest impact from the consolidation of RJES in the current year.

Year ended September 30, 2013 compared with the year ended September 30, 2012 – Capital Markets

Pre-tax income in fiscal year 2013 in the Capital Markets segment increased \$26 million, or 35%, over the prior year.

Certain of the Capital Markets businesses of Morgan Keegan were immediately integrated into RJ&A's operations on the date of acquisition. Other Morgan Keegan Capital Markets businesses were integrated into RJ&A over time and

were completed by mid-February 2013. A full year of Morgan Keegan equity capital markets and fixed income operations are included in fiscal year 2013 results, as compared to only six months in fiscal year 2012, impacting comparisons of our legacy capital markets results, especially fixed income operations, to fiscal year 2013 results.

Our fixed income revenues in fiscal year 2013 were significantly higher as compared to the prior year primarily due to the inclusion of a full year's Morgan Keegan results. The combination of our former fixed income operations with Morgan Keegan's fixed income operations results in a combined department that is approximately three times the size of our legacy fixed income business.

Net revenues in fiscal year 2013 increased by \$126 million, or 15%. Total institutional sales commissions increased 15% over the prior year. Equity institutional sales commissions increased \$17 million, or 7%, primarily due to improved equity market conditions. The \$60 million, or 22%, increase in fixed income institutional sales commissions over the prior year is primarily due to the increased size of our fixed income operations after the Morgan Keegan acquisition and the inclusion of twelve months of

Index

the combined entities operations in the current year as compared to only six months in the prior year. Our significantly larger public finance fixed income operations as a result of the Morgan Keegan acquisition favorably impacted both our investment banking revenues and our securities commissions and fees.

The number of lead and co-managed equity underwritings, as well as merger & acquisition transactions, during fiscal year 2013 increased significantly in our U.S. operations as compared to the prior year. In the latter part of the first quarter of our fiscal 2013, concerns related to the then pending fiscal cliff crisis had, at least in part, a favorable impact on our equity capital markets business as underwriting and merger and acquisition activity improved significantly as issuers sought to complete certain equity transactions in advance of any anticipated tax law changes. The activity levels experienced in the first quarter of fiscal year 2013 slowed considerably thereafter until a very active fourth quarter. For fiscal year 2013, the sectors in which we generated the most significant amounts of merger and acquisition fees were technology services, energy, technology, financial services, healthcare, and general industrials. Capital markets activities in our Canadian operations have remained sluggish throughout fiscal year 2013, continuing to reflect the adverse market conditions which existed throughout the prior fiscal year, particularly in the businesses in which we focus such as natural resources.

The primary contributor to our fixed income investment banking revenues in fiscal year 2013 is our public finance investment banking operations. The volume of our lead and co-managed public finance underwritings increased significantly over the prior year. This favorable comparison is in part due to the positive impact of the inclusion of the public finance operations we acquired from Morgan Keegan in our results for an entire year.

The decrease in tax credit syndication fee revenues in fiscal year 2013 results from an increase in the amount of fee revenues that have been deferred, to be recognized at later dates upon completion of certain revenue recognition criteria. The volume of tax credit fund partnership interests sold during fiscal year 2013 is slightly higher than in the prior year.

Despite our increase in fixed income trading capacity resulting from the Morgan Keegan acquisition, our trading profit results for fiscal year 2013, while positive overall, were unfavorably impacted by adverse conditions in the municipal fixed income market. This market was impacted during fiscal year 2013 by a number of factors. Municipal fixed income markets were negatively impacted during the first quarter by discussions and rumors regarding potential changes in the tax laws pertaining to limits, or caps, on the tax-exempt advantages of municipal fixed income instruments (the "fiscal cliff"). In response to these uncertainties, interest rates on municipal securities increased during December 2012, which negatively impacted our trading results. During the third quarter, the 10-year benchmark interest rate increased over 60 basis points in a very short period of time (May through June 30, 2013), resulting in very little demand for municipal fixed income securities in the market and valuation losses on municipal securities held in inventory, which negatively impacted our third quarter trading results. During the fourth quarter interest rates retreated somewhat back to their early May 2013 levels, and our trading results were strong, especially in municipal products, during that period. All of these factors, considered in conjunction with what were strong municipal fixed income trading results in the prior year, resulted in unfavorable trading profits in year-over-year comparisons.

Non-interest expenses in fiscal year 2013 increased \$101 million, or 13%, over the prior year primarily driven by the inclusion of twelve months of the Morgan Keegan fixed income operations. Sales commission expense increased \$41 million, or 22%, which is correlated with the increase in overall institutional sales commission revenues of 15%, and includes the impact of the shift to a higher proportion of commissions being fixed income sales which are paid higher commissions including certain retention-related expenses implemented as part of the Morgan Keegan acquisition. Administrative and incentive compensation and benefit expense increased \$39 million, or 10%, primarily driven by the significant increase in personnel from the Morgan Keegan acquisition. Communications and information processing expense increased \$7 million, or 13%, as a result of new technology initiatives and a full year of Morgan Keegan expenses. Goodwill impairment expense associated with RJES of \$7 million (see discussion below) and a \$6

million increase in losses of real estate partnerships held by consolidated variable interest entities (discussed below) contributed to the increase in other expense. These increases are partially offset by a decrease in clearance and other expense of \$5 million, or 9%. The decrease results primarily from the application of differing clearing charge allocation methodologies between the Capital Markets and the PCG segments within RJ&A as compared to the historic MK & Co. operations which favorably impact prior year comparisons (refer to the PCG results of operations herein for a discussion of an offsetting unfavorable prior year comparison within that segment).

During the second quarter of fiscal year 2013, we incurred impairment expense associated with the RJES operations of \$6.9 million. However, since we did not own 100% of RJES as of March 31, 2013, \$2.3 million of this expense is attributable to others and is included in the offsetting noncontrolling interests amount attributable to others. Therefore the net impact of this goodwill impairment on the pre-tax results after consideration of amounts attributable to noncontrolling interests is \$4.6 million. Refer to the goodwill section of this Item 7 and Note 13 of the Notes to Consolidated Financial Statements in this Form 10-K for further information on this goodwill impairment expense.

Index

Losses of real estate partnerships held by consolidated VIEs result directly from the consolidation of certain low-income housing tax credit funds. Since we only hold an insignificant interest in these consolidated funds, nearly all of these losses are attributable to others and are therefore included in the offsetting noncontrolling interests. Refer to Note 11 of the Notes to Consolidated Financial Statements in this Form 10-K for further information on the consolidation of VIEs.

Noncontrolling interests include the consolidation of RJES (for periods prior to April 2013, the period in which we acquired the interests previously held by others) as well as the impact of consolidating certain low-income housing tax credit funds, which impacts other revenue, interest expense, and losses of real estate partnerships held by consolidated VIEs (as described in the previous paragraph) by including the portion of these consolidated entities which we do not own. Total segment expenses attributable to noncontrolling interests in fiscal year 2013 increased by \$2 million as compared to the prior year in part as a result of the portions of the RJES goodwill impairment expense attributable to others as well as the increase in losses of real estate partnerships held by VIEs.

Results of Operations – Asset Management

The following table presents consolidated financial information for our Asset Management segment for the years indicated:

	Year ended September 30,					
	2014	% change	2013	% change	2012	
	(\$ in thousands)					
Revenues:

Managed Programs

As of September 30, 2014, approximately 81% of investment advisory fees recorded in this segment are earned from assets held in managed programs. Of these revenues, approximately 60% of our investment advisory fees recorded each quarter are determined based on balances at the beginning of a quarter, approximately 25% are based on balances at the end of the quarter and the remaining 15% are computed based on average assets throughout the quarter.

On December 24, 2012, Eagle acquired a 45% interest in ClariVest, an acquisition that bolstered our platform in the large-cap investment objective. See Note 3 of the Notes to Consolidated Financial Statements in this Form 10-K for additional information regarding the ClariVest acquisition.

Index

The following table reflects fee-billable financial assets under management in managed programs at the dates indicated:

	September 30, 2014 (in millions)	2013	2012
Assets under management:			
Eagle Asset Management, Inc. ⁽¹⁾	\$28,752	\$27,886	\$19,986
Raymond James Consulting Services	13,085	11,385	9,443
Unified Managed Accounts (“UMA”)	7,587	4,962	2,855

Sub-total assets under management	69,368	60,788	44,168
Less: Assets managed for affiliated entities	(4,811) (4,799) (4,185
Sub-total net assets under management	64,557	55,989	39,983
MK & Co. managed fee-based assets ⁽²⁾	—	—	2,801
Total financial assets under management	\$64,557	\$55,989	\$42,784

(1) September 30, 2014 and 2013 amounts include the assets under management of ClariVest, which Eagle acquired on December 24, 2012.

(2) Revenues generated from the Closing Date of the Morgan Keegan acquisition through mid-February 2013 (the platform conversion date to RJ&A) arising from assets in what were during such time MK & Co. managed fee-based programs, were included in the PCG segment. These assets were managed by unaffiliated portfolio managers.

The following table summarizes the activity impacting the total financial assets under management in managed programs (excluding activity in assets managed for affiliated entities and MK & Co. managed fee-based assets for the periods prior to the conversion of MK & Co. accounts to the RJ&A platform) for the periods indicated:

	Year ended September 30,		
	2014	2013	2012
	(in millions)		
Assets under management at beginning of year	\$60,788	\$44,168	\$35,648
Net inflows of client assets	4,688	4,873	2,999
Net market appreciation in asset values	3,892	6,233	5,521
Inflow resulting from the ClariVest acquisition ⁽¹⁾	—	3,113	—
Inflows resulting from the conversion of MK & Co. accounts to the RJ&A platform ⁽²⁾	—	2,401	—
Assets under management at end of year	\$69,368	\$60,788	\$44,168

(1) Eagle acquired a 45% interest in ClariVest on December 24, 2012.

(2) In mid-February 2013, the client accounts of MK & Co. were converted onto the RJ&A platform.

Non-discretionary asset-based programs

As of September 30, 2014, approximately 19% of investment advisory fees revenue recorded in this segment are earned for administrative services on assets held in non-discretionary asset-based programs. Such assets totaled \$81.3 billion and \$64.7 billion as of September 30, 2014 and 2013, respectively. Including the MK & Co. assets held in non-discretionary asset-based programs prior to the fiscal year 2013 conversion of MK & Co. accounts to the RJ&A platform, assets held in these programs as of September 30, 2012 totaled \$55.1 billion. All investment advisory fees

associated with these programs are determined based on balances at the beginning of the quarter.

Index

The following table summarizes the activity impacting the fee-billable financial assets in non-discretionary asset-based programs (excluding activity in MK & Co. non-discretionary asset-based programs for the periods prior to the conversion of MK & Co. accounts to the RJ&A platform) for the periods indicated:

	Year ended September 30,		
	2014	2013	2012 ⁽¹⁾
	(in millions)		
Assets in non-discretionary asset-based programs at beginning of year	\$64,681	\$48,368	\$37,601
Net inflows of client assets	10,442	6,421	6,264
Net market appreciation in asset values	6,178	3,265	4,503
Inflows resulting from the conversion of MK & Co. accounts to the RJ&A platform ⁽²⁾	—	6,627	—
Assets in non-discretionary asset-based programs at end of year	\$81,301	\$64,681	\$48,368

(1) Excludes the activity of MK & Co. non-discretionary asset-based programs. Such programs held \$6.8 billion of assets as of September 30, 2012.

(2) In mid-February 2013, the client accounts of MK & Co. were converted onto the RJ&A platform.

Year ended September 30, 2014 compared with the year ended September 30, 2013 – Asset Management

Pre-tax income in the Asset Management segment increased \$32 million, or 33%, over the prior year.

Investment advisory fee revenue increased by \$71 million, or 29%, primarily generated by an increase in assets under management and increased performance fees from certain managed funds. Performance fees, which are earned by managed funds for exceeding certain performance targets, increased \$8 million over the amount earned in the prior year. Assets in both managed and non-discretionary asset-based programs have increased substantially since the prior year. Refer to the tables above for information regarding the increases in the balances of assets held in our programs.

Other revenue increased by \$6 million, or 13%, primarily resulting from an increase in fee income generated by our RJ Trust subsidiary reflecting a 16% increase in RJ Trust client assets compared to the prior year, to \$3.38 billion as of September 30, 2014.

Expenses increased by approximately \$40 million, or 21%, primarily resulting from a \$13 million, or 41%, increase in investment sub-advisory fees, a \$12 million, or 33%, increase in other expenses, and an \$11 million, or 12%, increase in administrative and performance based incentive compensation. The increase in investment sub-advisory fee expense is directly related to the increase in assets in programs managed by external managers. Such assets are included within the UMA and Raymond James Consulting Services program asset under management balances. The increase in other expense is primarily due to increases in the costs incurred so that certain funds sponsored by Eagle are available as investment choices on the platforms of other broker-dealers and increases in expenses of RJ Trust resulting from the increase in client assets. The increase in administrative and performance based incentive compensation is a result of: the combination of increases in performance compensation which is directly related to the increase in investment advisory fee revenues and the performance fees earned during the year; increases in salary and related expenses resulting from the addition of ClariVest on December 24, 2012; and annual salary increases and certain additions to staff associated with our operations.

Noncontrolling interests includes the impact of the consolidation of certain subsidiary investment advisors and other subsidiaries (including ClariVest). Total segment net income attributable to others increased by \$5 million as compared to the prior year since certain of the current year performance fees were earned by certain of these subsidiaries, and therefore a portion is attributable to others.

Year ended September 30, 2013 compared to the year ended September 30, 2012 – Asset Management

Pre-tax income in the Asset Management segment in fiscal year 2013 increased \$29 million, or 43%, over the prior year. Investment advisory fee revenue increased by \$49 million, or 25%, generated by an increase in assets under management.

Assets under management in managed programs at September 30, 2013 increased \$13.2 billion, or 31%, over the prior year. The increase results from a combination of net inflows, inflows resulting from our acquisition of an interest in ClariVest, inflows resulting from the conversion of MK & Co. accounts to the RJ&A platform, and market appreciation in asset values.

Index

Assets in non-discretionary asset-based programs at September 30, 2013 increased \$9.6 billion, or 17%, over the prior year. The increase results from a combination of net inflows, inflows resulting from the conversion of MK & Co. accounts to the RJ&A platform, and market appreciation in asset values.

Other revenue in fiscal year 2013 increased by \$7 million, or 18%, primarily resulting from an increase in fee income generated by RJ Trust reflecting a 19% increase in RJ Trust client assets as compared to the prior year, to \$2.92 billion as of September 30, 2013.

Expenses in fiscal year 2013 increased by approximately \$25 million, or 15%, resulting from a \$11 million, or 13%, increase in administrative and incentive compensation and benefits costs, a \$7 million, or 25%, increase in investment sub-advisory fees, a \$4 million, or 12%, increase in other expenses and a \$3 million, or 16%, increase in communications and information processing expense. The increase in administrative and incentive compensation expense is a result of the combination of increases in salary expenses resulting from the addition of ClariVest, annual increases and additions to staff associated with our legacy operations, as well as an increase in performance compensation which is directly related to the increase in investment advisory fee revenues. The increase in investment sub-advisory fee expense is directly related to the increase in advisory fees paid to the external managers associated with certain assets included within the UMA and Raymond James Consulting Services programs. The increase in other expense is primarily due to increases in the costs incurred so that certain funds sponsored by Eagle are available as investment choices on the platforms of other broker-dealers and increases in the expenses of RJ Trust resulting from the increase in client assets. The increase in communication and information processing expense is primarily a result of the addition of ClariVest operations and costs associated with the implementation of a new back-office system supporting this segment.

Year ended September 30, 2014 compared with the year ended September 30, 2013 – RJ Bank

Pre-tax income in the RJ Bank segment decreased \$25 million, or 9%, compared to the prior year. The decrease in pre-tax income was primarily attributable to a \$19 million, or 24%, increase in non-interest expenses (excluding the provision for loan losses) and an increase of \$11 million, or 429%, in the provision for loan losses, offset by a \$5 million increase in net revenues. The increase in net revenues was attributable to an \$8 million increase in net interest income offset by a \$3 million decrease in other income.

Net interest income increased \$8 million as a result of a \$1.2 billion increase in average interest-earning banking assets offset by a decrease in the net interest margin. The increase in average interest-earning banking assets was driven by a \$1.4 billion increase in average loans with average corporate loans increasing \$1.1 billion, or 17%, and average SBL increasing \$337 million, or 76%. The net interest margin decreased to 2.98% from 3.25% primarily as a result of the decrease in the yield of the average interest-earning assets. The yield on interest-earning banking assets decreased to 3.04% from 3.34% due to a decline in the loan portfolio yield. The loan portfolio yield decreased primarily due to a reduction in the corporate loan portfolio yield resulting from lower yields on new loans and refinancings as well as lower corporate loan fee income. The residential mortgage loan portfolio yield declined due to adjustable rate loans resetting at lower rates.

Corresponding to the increase in average interest-earning banking assets, average interest-bearing banking liabilities increased \$1.2 billion to \$10.5 billion.

The decrease in other income as compared to the prior year was primarily due to a \$3 million decline in gains from the sale of held for sale loans due to lower residential mortgage loan originations, and a \$2 million increase in foreign currency losses, which were partially offset by a \$2 million increase in bank-owned life insurance valuation gains.

The increase in provision for loan losses resulted from significant loan portfolio growth, which was partially offset by a decrease in corporate criticized loans, the favorable resolution of corporate problem loans, lower loan-to-value

(“LTV”) ratios in the residential mortgage loan portfolio, and a reduction in delinquent residential mortgage loans. These credit characteristics reflected the positive impact from improved economic conditions, which have resulted in a decline in the criticized loan balance and nonperforming assets as a percentage of total assets. In addition, net loan charge-offs decreased \$12 million, or 87%, to \$2 million, which was primarily attributable to improved credit characteristics within both the CRE and residential mortgage loan portfolios.

The \$19 million increase in non-interest expenses (excluding the provision for loan losses) as compared to the prior year was primarily attributable to a \$4 million, or 14%, increase in affiliate deposit account servicing fees related to increased deposit balances, a \$4 million or 75% increase in FDIC insurance premiums due to higher deposit balances and assessment rates, a \$4 million, or 16%, increase in compensation and benefits related to staff additions, a \$2 million increase in SBL affiliate fees, and a \$1 million, or 39%, increase in communications and information processing expense.

Index

Year ended September 30, 2013 compared to the year ended September 30, 2012 – RJ Bank

Pre-tax income generated by the RJ Bank segment in fiscal year 2013 increased \$28 million, or 11%. The improvement in pre-tax income was primarily attributable to an increase of \$11 million, or 3%, in net revenues and a \$23 million, or 90%, decrease in the provision for loan losses, offset by a \$7 million, or 9%, increase in non-interest expenses (excluding the provision for loan losses). The \$11 million increase in net revenues was attributable to a \$17 million increase in net interest income, partially offset by a \$6 million decrease in other income.

Net interest income in fiscal year 2013 increased \$17 million, or 5%, primarily as a result of a \$1.3 billion increase in average interest-earning banking assets. This increase in average interest-earning banking assets was driven by a \$1.1 billion increase in average loans as well as increases in both average investments and cash. The significant increase in average loans resulted from a strong corporate lending market, including our Canadian lending operation (which began in late February 2012), and growth in the recently introduced securities based lending product. The yield on interest-earning banking assets decreased to 3.34% from 3.61% due to declines in both the loan and investment yields. The loan portfolio yield decreased to 3.86% from 4.20% due to a reduction in the corporate loan portfolio yield resulting from tightened credit spreads and the repricing of existing loans at lower rates. In addition, the yield of the residential mortgage loan portfolio declined as a result of adjustable rate loans resetting at lower rates as well as lower rates on new production. Primarily as a result of the decrease in the yield of the average interest-earning assets, the net interest margin decreased to 3.25% from 3.50%.

Corresponding to the increase in interest-earning banking assets in fiscal year 2013, average interest-bearing banking liabilities increased \$1.2 billion to \$9.3 billion.

The decrease in other income in fiscal year 2013 was primarily due to a \$7 million decrease in foreign currency gains/losses from prior year levels, a \$2 million loss in the valuation of RJ Bank's bank-owned life insurance, and a prior year gain of \$2 million resulting from a settlement with a residential mortgage loan servicer. These were partially offset by a \$3 million reduction in other-than-temporary impairment ("OTTI") losses on our available for sale securities portfolio and a \$2 million increase in income from the sale of held for sale loans.

The significant reduction in the provision for loan losses in fiscal year 2013 resulted from improved credit quality in the loan portfolio including a decrease in corporate criticized loans, the favorable resolution of corporate problem loans, lower LTV ratios in the residential mortgage loan portfolio, and a significant reduction in residential mortgage delinquent loans. These credit characteristics reflected the positive impact from improved economic conditions. Net loan charge-offs decreased \$11 million, or 45%, to \$13 million.

The \$7 million increase in non-interest expenses in fiscal year 2013 (excluding the provision for loan losses) was primarily attributable to a \$3 million, or 18%, increase in compensation and benefits expenses related to staff additions to support increased loan activity, a \$3 million increase in affiliate deposit account servicing fee expenses resulting from increased deposit balances, and a \$1 million increase in affiliate fee expenses related to our securities based lending business.

(1) Nonaccrual loans are included in the average loan balances. Payment or income received on impaired nonaccrual loans are applied to principal. Income on other nonaccrual loans is recognized on a cash basis. Fee income on loans included in interest income for the years ended September 30, 2014, 2013 and 2012 was \$34 million, \$48 million, and \$51 million, respectively.

(2) The yield is presented on a tax-equivalent basis utilizing the federal statutory tax rate of 35%.

(3) The CRE Construction yield was positively impacted by a loan payoff with a significant unearned discount.

(4) The CRE yield for the year ended September 30, 2014 as compared to prior years was negatively impacted by lower fee income.

(5) Negotiable Order of Withdrawal ("NOW") account.

Index

Increases and decreases in interest income and interest expense result from changes in average balances (volume) of interest-earning banking assets and liabilities, as well as changes in average interest rates. The following table shows the effect that these factors had on the interest earned on RJ Bank's interest-earning assets and the interest incurred on its interest-bearing liabilities. The effect of changes in volume is determined by multiplying the change in volume by the previous period's average yield/cost. Similarly, the effect of rate changes is calculated by multiplying the change in average yield/cost by the previous year's volume. Changes applicable to both volume and rate have been allocated proportionately.

Among the items impacting this segment, as more fully described in Item 1 in this report, the Other segment results include our principal capital and private equity activities.

Year ended September 30, 2014 compared to the year ended September 30, 2013 – Other

The pre-tax loss generated by this segment decreased by approximately \$48 million, or 37%, compared to the prior year.

Net revenues in this segment decreased \$81 million, or 177%. The decrease is primarily attributable to a decrease in revenues in the current year arising from our private equity portfolio investments. Approximately \$74 million of prior year revenues were associated with our indirect investment in Albion, an investment which was sold in April 2013 and therefore such revenues did not recur in the current year. Revenues associated with the remainder of our private equity portfolio have decreased \$6 million compared to the prior year. Offsetting these decreases, we realized a \$6 million increase in the current year from gains on redemptions or sales of ARS, most notably arising from the current year redemption of Jefferson County Alabama Sewer Revenue Refunding Warrants ARS.

Non-interest expenses decreased \$74 million, or 63%. The decrease is primarily a result of a decrease in acquisition related expenses since our integration of Morgan Keegan was substantially complete as of September 30, 2013. The acquisition related expenses incurred in the prior year were primarily comprised of expenses associated with the integration of Morgan Keegan's operations into our own (see Note 3 of our Notes to Consolidated Financial Statements in this Form 10-K for additional information on the components of the prior year expense).

The portion of revenue attributable to noncontrolling interests decreased by nearly \$56 million compared to the prior year. Of the prior year Albion revenues received, approximately \$51 million related to the portion of that investment

which we did not own.

Year ended September 30, 2013 compared to the year ended September 30, 2012 – Other

The pre-tax loss generated by this segment in fiscal year 2013 increased by approximately \$6 million, or 4%.

Total revenues in fiscal year 2013 increased \$68 million, or 116%. The increase primarily resulted from a \$44 million increase in other revenues associated with our indirect investment in Albion, which was sold in April 2013. Fiscal year 2013 includes \$74 million of favorable valuation adjustments and distributions received from Albion (\$65 million of favorable valuation adjustments and \$9 million of dividends received), compared to \$30 million of favorable valuation adjustments and dividends received on

60

Index

Albion in the prior fiscal year. Revenues resulting from either distributions received or valuation adjustments related to certain private equity investments we acquired as part of the Morgan Keegan acquisition increased \$16 million over the prior year.

Interest expense in fiscal year 2013 increased \$18 million, or 29% over the prior year. The increase primarily results from our March 2012 issuances of \$350 million 6.9% senior notes and \$250 million 5.625% senior notes, as well as interest expense associated with borrowings under certain credit agreements with Regions Bank (as more fully described in Note 15 of the Notes to Consolidated Financial Statements in this Form 10-K). Both of the March 2012 debt offerings and the borrowings from Regions Bank were part of our acquisition financing activities and other transactions associated with the Morgan Keegan acquisition.

Acquisition related expenses in fiscal year 2013 increased \$14 million, or 24%, over the prior year. These expenses are almost entirely comprised of expenses associated with our acquisition and integration of Morgan Keegan. These expenses include information systems integration and conversion costs, other integration related costs, occupancy and equipment costs which include costs incurred to abandon certain leased facilities that resulted from our integration activities, and severance related expenses (see Note 3 of the Notes to Consolidated Financial Statements in this Form 10-K for additional information).

Compensation and other expenses in fiscal year 2013 increased \$8 million, or 21%, over the prior year primarily as a result of an increase in incentive compensation expense.

The noncontrolling interest line item captures the pre-tax income generated from investments included in this segment of which we do not own 100%. The income before tax attributable to noncontrolling interests in fiscal year 2013 increased \$34 million over the prior year. This increase primarily resulted from the increase in revenues generated from the Albion investment, which resulted in a \$26 million increase over the prior year in the attribution of pre-tax income to others. The remaining \$8 million increase over the prior year resulted from increases in the pre-tax income generated by the other investments we hold in our private equity portfolio of which we do not own 100%.

Certain statistical disclosures by bank holding companies

As a financial holding company, we are required to provide certain statistical disclosures by bank holding companies pursuant to the SEC's Industry Guide 3. Certain of those disclosures are as follows for the fiscal year indicated:

	Year ended September 30,		
	2014	2013	2012
RJF return on average assets ⁽¹⁾	2.1%	1.7%	1.5%
RJF return on average equity ⁽²⁾	12.3%	10.6%	9.7%
Average equity to average assets ⁽³⁾	18.1%	17.3%	16.8%
Dividend payout ratio ⁽⁴⁾	19.3%	21.7%	23.6%

(1) Computed as net income attributable to RJF, Inc. for the year indicated, divided by average assets (the sum of total assets at the beginning and end of the year, divided by two).

(2) Computed by utilizing the net income attributable to RJF, Inc. and the average equity for each respective fiscal year. Average equity is computed by adding the total equity attributable to RJF, Inc. as of each quarter-end date during the indicated fiscal year, plus the beginning of the year total, divided by five.

(3) Computed as average equity (the sum of total equity at the beginning and end of the fiscal year, divided by two), divided by average assets (the sum of total assets at the beginning and end of the fiscal year, divided by two).

(4) Computed as dividends declared per common share during the fiscal year as a percentage of diluted earnings per common share.

Refer to the RJ Bank section of this MD&A and the Notes to Consolidated Financial Statements in this Form 10-K for the other required disclosures.

Liquidity and Capital Resources

Liquidity is essential to our business. The primary goal of our liquidity management activities is to ensure adequate funding to conduct our business over a range of market environments.

Senior management establishes our liquidity and capital policies. These policies include senior management's review of short- and long-term cash flow forecasts, review of monthly capital expenditures, the monitoring of the availability of alternative sources of financing, and the daily monitoring of liquidity in our significant subsidiaries. Our decisions on the allocation of capital to our

Index

business units consider, among other factors, projected profitability and cash flow, risk and impact on future liquidity needs. Our treasury departments assist in evaluating, monitoring and controlling the impact that our business activities have on our financial condition, liquidity and capital structure as well as maintain our relationships with various lenders. The objectives of these policies are to support the successful execution of our business strategies while ensuring ongoing and sufficient liquidity.

Liquidity is provided primarily through our business operations and financing activities. Financing activities could include bank borrowings, repurchase agreement transactions or additional capital raising activities under our “universal” shelf registration statement.

Cash provided by operating activities during the year ended September 30, 2014 was \$508 million. Cash generated by successful operating results over the period resulted in a \$586 million increase in cash. Significant changes in various other asset and liability balances which impact cash include: a \$1.58 billion decrease in assets segregated pursuant to regulations and other segregated assets, which results in an increase in cash. Brokerage client payables and other accounts payable decreased \$1.8 billion which results in an offsetting decrease in cash. Both of these activities are largely the result of a decrease in client cash deposits, refer to the discussion of the impact of an increase in the capacity to re-deposit client cash with unaffiliated banks who participate in our RJB DP, as described in the statement of financial condition analysis that follows within this Item 7, for more information regarding these activities. Other significant activities that impacted operating cash include: a decrease in securities purchased under agreements to resell, net of securities sold under agreements to repurchase, resulted in a \$207 million increase in operating cash. RJ Ltd. significantly reduced the balances in secured call loans receivable during the fiscal year, and instead invested such balances in depository accounts with third party Canadian financial institutions. Accrued compensation, commissions and benefits balances increased resulting in a \$72 million increase in operating cash. The increased accrual primarily results from the significant increase in both revenues and profits over the prior year. An increase in the stock loaned, net of stock borrowed balances resulted in a \$51 million increase in operating cash. Proceeds from sales of loans held for sale, net of purchases, resulted in a \$46 million increase in operating cash. Partially offsetting these activities which resulted in increases of cash, decreases in cash resulted from the following activities: brokerage client receivables increased \$160 million primarily due to an increase in end of year client margin balances (end of year client margin balances increased, however as noted in the analysis of net interest within this Item 7, average client margin balances outstanding decreased this fiscal year). Trading instruments held increased \$47 million. We used \$34 million in cash to fund loans provided to financial advisors, net of repayments. All other components of operating activities combined to net an \$12 million source of cash.

Investing activities resulted in the use of \$2.10 billion of cash during the year ended September 30, 2014. The primary investing activity was the use of \$2.21 billion in cash to fund an increase in bank loans, net of proceeds from sales of loans held for investment. We received proceeds from the maturation, repayment, redemption or sale of securities in our available for sale security portfolio of \$153 million, net of purchases of additional securities. All other components of investing activities combined to net a \$42 million use of cash.

Financing activities provided \$1.22 billion of cash during the year ended September 30, 2014. Increases in RJ Bank deposits provided \$734 million. Proceeds from borrowed funds, net of repayments, have resulted in a \$567 million increase in cash. RJ Bank’s advances from the FHLB are the primary source of these borrowings (see Note 15 of the Notes to Consolidated Financial Statements in this Form 10-K for additional information regarding these borrowings). We used \$88 million in payment of dividends to our shareholders. All other components of financing activities combined to net an \$11 million source of cash.

We believe our existing assets, most of which are liquid in nature, together with funds generated from operations and committed and uncommitted financing facilities, should provide adequate funds for continuing operations at current levels of activity.

Index

Sources of Liquidity

Approximately \$1.21 billion of our total September 30, 2014 cash and cash equivalents (a portion of which is invested on behalf of the parent company by RJ&A, and a portion of which is maintained in a deposit account at RJ Bank) was available to us without restrictions. The cash and cash equivalents held were as follows:

Cash and cash equivalents:	September 30, 2014 (in thousands)
RJF ⁽¹⁾	\$778,855
RJ&A ⁽²⁾	561,594
RJ Bank ⁽¹⁾	313,364
RJ Ltd.	265,857
Other subsidiaries	279,393
Total cash and cash equivalents	\$2,199,063

RJF maintains a depository account at RJ Bank which has a balance of \$500 million as of September 30, 2014.

(1) This cash balance is reflected in the RJF total, and is excluded from the RJ Bank total, since this balance is available to RJF on-demand and without restriction.

(2) RJF has loaned \$458 million to RJ&A as of September 30, 2014, which RJ&A has invested on behalf of RJF in cash and cash equivalents.

In addition to the liquidity on hand described above, we have other various potential sources of liquidity which are described below.

Liquidity Available from Subsidiaries

Liquidity is principally available to the parent company from RJ&A and RJ Bank.

RJ&A is required to maintain net capital equal to the greater of \$1 million or 2% of aggregate debit items arising from client transactions. Covenants in RJ&A's committed secured financing facilities require its net capital to be a minimum of 10% of aggregate debit items. At September 30, 2014, RJ&A significantly exceeded both the minimum regulatory and its financing covenants net capital requirements. At that date, RJ&A had excess net capital of approximately \$406 million, of which approximately \$168 million is available for dividend while still maintaining the targeted net capital ratio of 15% of aggregate debit items. There are also limitations on the amount of dividends that may be declared by a broker-dealer without FINRA approval.

RJ Bank may pay dividends to the parent company without prior approval by its regulator as long as the dividend does not exceed the sum of RJ Bank's current calendar year and the previous two calendar years' retained net income, and RJ Bank maintains its targeted capital to risk-weighted assets ratios. At September 30, 2014, RJ Bank was operating at its targeted total capital to risk-weighted assets ratio of 12.5%.

Liquidity available to us from our subsidiaries, other than RJ&A and RJ Bank, is relatively insignificant and in certain instances may be subject to regulatory requirements.

Index

Borrowings and Financing Arrangements

The following table presents our financing arrangements with third party lenders that we generally utilize to finance a portion of our fixed income securities trading instruments held, and the outstanding balances related thereto, as of September 30, 2014:

	Committed secured ⁽¹⁾		Uncommitted secured (1)(2)		Uncommitted unsecured (1)(2)		Total	
	Financing amount (\$ in thousands)	Outstanding balance	Financing amount	Outstanding balance	Financing amount	Outstanding balance	Financing amount	Outstanding balance
RJ&A	\$300,000	\$35,000	\$1,750,000	\$201,194	\$375,000	\$—	\$2,425,000	\$236,194
RJ Ltd. ⁽³⁾	—	—	39,714	—	—	—	39,714	—
RJ Securities, Inc. ⁽⁴⁾	92,387	5,000	—	—	—	—	92,387	5,000
RJF	—	—	—	—	100,000	—	100,000	—
Total	\$392,387	\$40,000	\$1,789,714	\$201,194	\$475,000	\$—	\$2,657,101	\$241,194
Total number of agreements	4		7		8		19	

(1) Our ability to borrow is dependent upon compliance with the conditions in the various committed loan agreements and collateral eligibility requirements.

(2) Lenders are under no contractual obligation to lend to us under uncommitted credit facilities.

(3) This financing arrangement is primarily denominated in Canadian currency, amounts presented in the table have been converted to U.S. dollars at the currency exchange rate in effect as of September 30, 2014.

(4) RJ Securities, Inc. is the borrower under the “Regions Credit Facility,” see Note 15 of the Notes to Consolidated Financial Statements in this Form 10-K for discussion of the terms of this committed secured borrowing facility.

The committed domestic financing arrangements are in the form of either tri-party repurchase agreements or a secured line of credit. The uncommitted domestic financing arrangements are in the form of secured lines of credit, secured bilateral or tri-party repurchase agreements, or unsecured lines of credit.

We maintain three unsecured settlement lines of credit available to our Argentine joint venture in the aggregate amount of \$12 million. Of the aggregate amount, one settlement line for \$9 million is guaranteed by RJF. Borrowings outstanding on these lines of credit as of September 30, 2014 amounted to approximately \$310 thousand.

RJ Bank had \$500 million in FHLB advances outstanding at September 30, 2014, comprised of two \$250 million floating-rate advances, both of which are secured by a blanket lien on RJ Bank’s residential loan portfolio (see Note 15 of the Notes to Consolidated Financial Statements in this Form 10-K for additional information regarding these borrowings). The interest rate applicable to the FHLB advances resets on either a monthly or a quarterly basis. RJ Bank has the option to prepay each advance without penalty on each interest reset date. RJ Bank has \$641 million in immediate credit available from the FHLB as of September 30, 2014 and total available credit of 30% of total assets, with the pledge of additional collateral to the FHLB. On October 9, 2013, RJ Bank entered into a forward-starting advance transaction with the FHLB to borrow \$25 million on October 13, 2015. Once funded, this borrowing will bear

interest at the rate of 3.4%, and will mature on October 13, 2020.

RJ Bank is eligible to participate in the Fed's discount-window program; however, RJ Bank does not view borrowings from the Fed as a primary means of funding. The credit available in this program is subject to periodic review, may be terminated or reduced at the discretion of the Fed, and would be secured by pledged C&I loans.

From time to time we purchase short-term securities under agreements to resell ("Reverse Repurchase Agreements") and sell securities under agreements to repurchase ("Repurchase Agreements"). We account for each of these types of transactions as collateralized financings with the outstanding balances on the Repurchase Agreements included in securities sold under agreements to repurchase. At September 30, 2014, collateralized financings outstanding in the amount of \$244 million are included in securities sold under agreements to repurchase on the Consolidated Statements of Financial Condition. Of this total, outstanding balances on the committed and uncommitted Repurchase Agreements (which are reflected in the table of financing arrangements above) were \$35 million and \$51 million, respectively, as of September 30, 2014. Such financings are generally collateralized by non-customer, RJ&A owned securities. The required market value of the collateral associated with the committed secured facilities ranges from 102% to 133% of the amount financed.

Index

The average daily balance outstanding during the five most recent successive quarters, the maximum month-end balance outstanding during the quarter and the period end balances for Repurchase Agreements and Reverse Repurchase Agreements of RJF are as follows:

For the quarter ended:	Repurchase transactions			Reverse repurchase transactions		
	Average daily balance outstanding	Maximum month-end balance outstanding during the quarter	End of period balance outstanding	Average daily balance outstanding	Maximum month-end balance outstanding during the quarter	End of period balance outstanding
	(in thousands)					
September 30, 2014	\$238,841	\$260,323	\$244,495	\$458,158	\$495,286	\$446,016
June 30, 2014	371,573	420,327	286,924	556,806	707,170	508,005
March 31, 2014	316,581	377,677	377,677	685,402	674,694	637,486
December 31, 2013	328,867	363,845	345,701	642,940	658,244	638,893
September 30, 2013	267,984	300,933	300,933	643,422	709,120	709,120

At September 30, 2014, in addition to the financing arrangements described above, we had corporate debt of \$1.2 billion. The balance is comprised of \$350 million outstanding on our 6.90% senior notes due 2042, \$249 million outstanding on our 5.625% senior notes due 2024, \$300 million outstanding on our 8.60% senior notes due August 2019, \$250 million outstanding on our 4.25% senior notes due April 2016, and \$42 million outstanding on a mortgage loan for our home-office complex.

Our current senior long-term debt ratings are:

Rating Agency	Rating	Outlook
Standard & Poor's Ratings Services ("S&P")	BBB	Stable
Moody's Investors Services ("Moody's")	Baa2	Stable

The S&P rating and outlook reflected above are as presented in their December, 2013 report.

The Moody's rating and outlook reflected above are as presented in their July, 2014 report.

Our current long-term debt ratings depend upon a number of factors including industry dynamics, operating and economic environment, operating results, operating margins, earnings trends and volatility, balance sheet composition, liquidity and liquidity management, our capital structure, our overall risk management, business diversification and our market share, and competitive position in the markets in which we operate. Deteriorations in any of these factors could impact our credit ratings. Any rating downgrades could increase our costs in the event we were to pursue obtaining additional financing.

Should our credit rating be downgraded prior to a public debt offering it is probable that we would have to offer a higher rate of interest to bond holders. A downgrade to below investment grade may make a public debt offering difficult to execute on terms we would consider to be favorable. One of our committed secured financing agreements having a maximum borrowing in the amount of \$100 million, includes as an event of default, the failure of RJF as a guarantor of the repayment of the loan, to maintain an investment grade rating on its unsecured senior debt. Otherwise, none of our credit agreements contain a condition or event of default related to our credit ratings. A downgrade below investment grade could also result in the termination of certain derivative contracts and the counterparties to the derivative instruments could request immediate payment or demand immediate and ongoing overnight collateralization on our derivative instruments in liability positions (see Note 18 of our Notes to

Consolidated Financial Statements in this Form 10-K for additional information). A credit downgrade could create a reputational issue and could also result in certain counterparties limiting their business with us, result in negative comments by analysts and potentially impact investor perception of us, and resultantly impact our stock price and/or our clients' perception of us.

Other sources of liquidity

We own life insurance policies which are utilized to fund certain non-qualified deferred compensation plans and other employee benefit plans. The policies which we could readily borrow against have a cash surrender value of approximately \$220 million as of September 30, 2014 and we are able to borrow up to 90%, or \$198 million of the September 30, 2014 total, without restriction. There are no borrowings outstanding against any of these policies as of September 30, 2014.

Index

On May 24, 2012 we filed a “universal” shelf registration statement with the SEC to be in a position to access the capital markets if and when necessary or perceived by us to be opportune.

See the “contractual obligations” section below for information regarding our contractual obligations.

Potential impact of Morgan Keegan matters subject to indemnification by Regions on our liquidity

As more fully described in Note 3 in the Notes to Consolidated Financial Statements in this Form 10-K, the SPA provides that in addition to customary indemnity for breaches of representations and warranties and covenants, Regions will indemnify RJF for losses incurred in connection with any litigation or similar matter related to pre-closing actions. As a result of these indemnifications, we do not anticipate the resolution of any pre-Closing Date Morgan Keegan litigation matters to negatively impact our liquidity (see Notes 3 and 21 of the Notes to Consolidated Financial Statements in this Form 10-K, and Part I Item 3 - Legal Proceedings, in this report for further information regarding the indemnifications and the nature of the pre-Closing Date matters).

Potential impact of on our liquidity from the scheduled maturity of corporate debt

One of our senior note issuances, the 4.25% senior notes with an aggregate principal amount of \$250 million, matures in April, 2016. At the present time, we do not intend to refinance this offering on or prior to its maturity date. Should we ultimately elect not to refinance, the repayment of the principal on the maturity date would reduce our excess liquidity.

Statement of financial condition analysis

The assets on our consolidated statement of financial condition consist primarily of cash and cash equivalents (a large portion of which is segregated for the benefit of clients), receivables including bank loans, financial instruments held for either trading purposes or as investments, and other assets. A significant portion of our assets are liquid in nature, providing us with flexibility in financing our business.

Total assets of \$23.3 billion at September 30, 2014 are approximately \$140 million, or 1% more than our total assets as of September 30, 2013. Net bank loans receivable increased \$2.1 billion due to significant growth of RJ Bank’s net loan portfolio during the year. Offsetting this increase, segregated assets pursuant to federal regulations at September 30, 2014 decreased \$1.58 billion compared to September 30, 2013, resulting from an increase during the current year in the capacity of the unaffiliated banks who participate in our RJBDP to accept client cash balances under the program. With the increase in RJBDP capacity, we increased the client cash balances re-deposited with such unaffiliated banks, which reduces the amount of brokerage client liabilities carried on our financial statements. Securities purchased under agreements to resell and other collateralized financings decreased \$263 million, as RJ Ltd. reduced its amount of secured call loans receivable (which is considered to be an other collateralized financing), and redirected such short-term investments to cash deposits with large Canadian financial institutions (which are included in our cash balance). The investment balance associated with our available for sale securities portfolio decreased \$137 million primarily as a result of redemptions, maturations, or sales of certain securities in the portfolio. Receivables from brokers-dealers and clearing organizations decreased \$136 million as certain receivable balances associated with our broker-dealer subsidiaries in the normal course of their businesses which were outstanding as of September 30, 2013 were settled during the year and did not recur. Cash and cash equivalents decreased \$398 million, refer to the discussion of the various sources and uses of cash during the period in the preceding liquidity and capital resources section of this MD&A.

Our liabilities at September 30, 2014 of \$18.9 billion are \$295 million, or 2% less than our liabilities as of September 30, 2013. The decrease in liabilities at September 30, 2014 compared to September 30, 2013 is primarily due to the

following: a \$1.99 billion decrease in brokerage client payables, which occurred due to the increase in capacity with unaffiliated banks in our RJBDP program and the resultant increase in client cash balances that were re-deposited with unaffiliated banks, which reduces the amount of brokerage client payable balances carried on our financial statements (refer to the related decrease in segregated assets pursuant to federal regulations discussed in the preceding paragraph). Offsetting the decrease, bank deposit liabilities increased \$734 million, reflecting increased deposits at RJ Bank, and our net borrowings increased by \$571 million, primarily resulting from \$500 million in borrowings RJ Bank made from the FHLB during the current year (refer to Note 15 of the Notes to Consolidated Financial Statements in this Form 10-K for information regarding these borrowings).

Index

Contractual obligations

The following table sets forth our contractual obligations:

	Total (in thousands)	Year ended September 30,					
		2015	2016	2017	2018	2019	Thereafter
Long-term debt obligations:							
Corporate debt ⁽¹⁾	\$1,190,836	\$4,086	\$254,171	\$4,578	\$4,846	\$305,105	\$618,050
Loans payable of consolidated variable interest entities ⁽²⁾	43,877	17,949	13,331	8,240	3,668	689	—
Long-term portion of other borrowings ⁽³⁾	505,216	5,000	—	500,000	216	—	—
Committed borrowing by RJ Bank ⁽⁴⁾	—	—	(25,000)	—	—	—	25,000
Sub-total long-term debt obligations	1,739,929	27,035	242,502	512,818	8,730	305,794	643,050
Estimated interest on long-term debt ⁽⁵⁾	973,030	77,929	78,528	67,651	66,391	66,108	616,423
Operating lease obligations ⁽⁶⁾	398,031	77,309	71,073	61,187	49,093	40,176	99,193
Purchase obligations ⁽⁷⁾	134,164	62,015	45,333	21,734	1,023	650	3,409
Long-term liabilities:							
Time deposits ⁽⁸⁾	344,703	77,438	61,088	79,371	46,663	80,143	—
Deferred compensation programs ⁽⁹⁾	315,477	44,282	48,810	62,974	52,308	55,343	51,760
Legal liabilities associated with matters subject to indemnification ⁽¹⁰⁾	154,364	51,455	51,455	51,454	—	—	—
Low income housing tax credit guarantee obligation ⁽¹¹⁾	28,421	3,969	3,910	4,757	5,247	5,388	5,150
Sub-total long-term liabilities	842,965	177,144	165,263	198,556	104,218	140,874	56,910
Total contractual obligations	\$4,088,119	\$421,432	\$602,699	\$861,946	\$229,455	\$553,602	\$1,418,985

(1) See Note 17 of the Notes to Consolidated Financial Statements in this Form 10-K for additional information.

(2) Loans which are non-recourse to us. See further discussion in Note 16 of the Notes to Consolidated Financial Statements in this Form 10-K.

(3) See Note 15 of the Notes to Consolidated Financial Statements in this Form 10-K for additional information.

(4) RJ Bank entered into a forward-starting advance transaction with the FHLB to borrow \$25 million on October 13, 2015.

(5) Interest computation includes scheduled interest on our senior notes, the mortgage note payable, RJ Bank's FHLB advances (assuming no change in the variable interest rate from that as of September 30, 2014), and RJ Bank's committed borrowing from the FHLB, see Note 15 and Note 17 of the Notes to Consolidated Financial Statements in this Form 10-K for information regarding the borrowings.

(6) Primarily comprised of outstanding obligations on long-term leases for office space.

In the normal course of our business, we enter into contractual arrangements whereby we commit to future purchases of products or services from unaffiliated parties. Purchase obligations for purposes of this table, include amounts associated with agreements to purchase goods or services that are enforceable and legally binding and that (7) specify all significant terms including: minimum quantities to be purchased, fixed, minimum or variable price provisions, and the approximate timing of the transaction. Our most significant purchase obligations are vendor contracts for communication services, processing services and software contracts. Most of our contracts have provisions for early termination, for purposes of this table we have assumed we would not pursue early termination of such contracts.

(8) See Note 14 of the Notes to Consolidated Financial Statements in this Form 10-K for additional information.

See the following page for the continuation of the explanations to the footnotes in the above table.

67

Index

Continuation of the footnote explanations pertaining to the table on the previous page:

Includes obligations, presented on a gross basis, of our Long-Term Incentive Plan, our Wealth Accumulation Plan, our Voluntary Deferred Compensation Program, and certain historic deferred compensation plans of MK & Co. See Notes 24 and 25 of the Notes to Consolidated Financial Statements in this Form 10-K for additional information regarding such plans. We own life insurance policies that are not presented in this table which are (9)utilized to fund certain of these obligations. See Note 10 of the Notes to Consolidated Financial Statements in this Form 10-K for information regarding our investments in company-owned life insurance. We also hold other investments that are not presented in this table to fund obligations of the historic deferred compensation plans of MK & Co., see Note 5 of the Notes to Consolidated Financial Statements in this Form 10-K for information regarding the fair value of such investments.

Regions has provided an indemnification to RJF for losses incurred in connection with Morgan Keegan legal proceedings pending as of the closing date of our Morgan Keegan acquisition, or commenced after the closing date and related to pre-closing date matters. See Note 21 of the Notes to Consolidated Financial Statements in this Form 10-K for further discussion. Amounts presented in this table represent the gross liabilities for such matters, (10)and do not reflect the related and offsetting indemnification asset. See Note 10 of the Notes to Consolidated Financial Statements in this Form 10-K for information regarding the indemnification asset. These liabilities do not have defined maturity dates, however since we expect that all such matters will be resolved within three years, we have assigned an equal amount of such liability balance to each of the following three years as our estimate of the timing associated with the resolution of such matters.

RJTCF has provided a guaranteed return on investment to a third party investor in one of its fund offerings, see Note 21 of the Notes to Consolidated Financial Statements in this Form 10-K for further discussion. Amounts (11)presented in this table represent the gross liability associated with this guarantee obligation, and do not reflect the related and offsetting financing asset. See Note 10 of the Notes to Consolidated Financial Statements in this Form 10-K for information regarding the offsetting financing asset.

We have made a number of investment commitments, either as commitments to fund low income housing tax credit (“LIHTC”) project partnerships, or to venture capital or private equity partnerships. We have also made commitments to provide loans to prospective financial advisors who have either accepted our offer, or recently recruited advisors, which have not yet been funded. See Note 21 of the Notes to Consolidated Financial Statements in this Form 10-K for further information on these and other commitments.

RJ Bank has entered into commitments to extend credit such as unfunded loan commitments, standby letters of credit, open end consumer and commercial lines of credit. See Note 27 of the Notes to Consolidated Financial Statements in this Form 10-K for further information on these and other outstanding off-balance credit-related commitments.

We are authorized by the Board of Directors to repurchase our common stock for general corporate purposes. There is no formal stock repurchase plan at this time. From time to time our Board of Directors has authorized specific dollar amounts for repurchases at the discretion of our Board’s Securities Repurchase Committee. As of September 30, 2014 the unused portion of the current authorization was \$49.4 million.

In the normal course of business, certain subsidiaries of ours act as general partner and may be contingently liable for activities of various limited partnerships. These partnerships engage primarily in real estate activities. In our opinion, such liabilities, if any, for the obligations of the partnerships will not in the aggregate have a material adverse effect on our consolidated financial position.

Regulatory

Refer to the discussion of the regulatory environment in which RJF and its subsidiaries operate, and the potential impact on our operations the various new rules and regulations arising from the Dodd-Frank Act, which include the Volcker Rule and the Basel III regulatory capital rules, may have on our business, in the Item 1 Business, Regulation section in this report.

RJ&A, RJFS, Eagle Fund Distributors, Inc. and Raymond James (USA) Ltd. all had net capital in excess of minimum requirements as of September 30, 2014.

RJ Ltd. is subject to the Minimum Capital Rule (Dealer Member Rule No. 17 of IIROC and the Early Warning System (Dealer Member Rule No. 30 of IIROC)). See the discussion in Note 26 where each of these rules is described. RJ Ltd. is not in Early Warning Level 1 or Level 2 at September 30, 2014.

RJF and RJ Bank are subject to various regulatory and capital requirements. Under the regulatory framework for prompt corrective action, RJF and RJ Bank met the requirements to be categorized as “well capitalized” as of September 30, 2014. One of RJ Bank’s U.S. subsidiaries is an agreement corporation and is also subject to regulation by the Fed. As of September 30, 2014, this RJ Bank subsidiary met the capital adequacy guideline requirements.

Index

The maintenance of certain risk-based regulatory capital levels could impact various capital allocation decisions impacting one or more of our businesses. However, due to the strong capital position of RJF and its regulated subsidiaries, we do not anticipate these capital requirements will have any negative impact on our future business activities.

See Note 26 of the Notes to Consolidated Financial Statements in this Form 10-K for further information on regulatory and capital requirements.

Critical accounting estimates

The consolidated financial statements are prepared in accordance with GAAP, which require us to make estimates and assumptions that affect the reported amounts of assets and liabilities and the reported amounts of revenues and expenses during any reporting period in our consolidated financial statements. Management has established detailed policies and control procedures intended to ensure the appropriateness of such estimates and assumptions and their consistent application from period to period. For a description of our significant accounting policies, see Note 2 of the Notes to Consolidated Financial Statements in this Form 10-K.

We believe that of our accounting estimates and assumptions, those described below involve a high degree of judgment and complexity. Due to their nature, estimates involve judgment based upon available information. Actual results or amounts could differ from estimates and the difference could have a material impact on the consolidated financial statements. Therefore, understanding these critical accounting estimates is important in understanding the reported results of our operations and our financial position.

Valuation of certain financial instruments, investments and other assets

The use of fair value to measure financial instruments, with related gains or losses recognized in our Consolidated Statements of Income and Comprehensive Income, is fundamental to our financial statements and our risk management processes.

“Trading instruments” and “available for sale securities” are reflected in the Consolidated Statements of Financial Condition at fair value or amounts that approximate fair value. Unrealized gains and losses related to these financial instruments are reflected in our net income or our total comprehensive income, depending on the underlying purpose of the instrument.

We measure the fair value of our financial instruments in accordance with GAAP, which defines fair value, establishes a framework that we use to measure fair value and provides for certain disclosures we provide about our fair value measurements included in our financial statements. Refer to Notes 5 and 6 in our Notes to Consolidated Financial Statements in this Form 10-K for these disclosures.

Fair value is defined by GAAP as the exchange price that would be received for an asset or paid to transfer a liability (an exit price) in the principal or most advantageous market for the asset or liability in an orderly transaction between willing market participants on the measurement date. We determine the fair values of our financial instruments and any other assets and liabilities required by GAAP to be recognized at fair value in the financial statements as of the close of business of each financial statement reporting period. These fair value determination processes also apply to any of our impairment tests or assessments performed for nonfinancial instruments such as goodwill, identifiable intangible assets, certain real estate owned and other long-lived assets.

In determining the fair value of our financial instruments in accordance with GAAP, we use various valuation approaches, including market and/or income approaches. Fair value is a market-based measure considered from the perspective of a market participant. As such, even when assumptions from market participants are not readily available, our own assumptions reflect those that we believe market participants would use in pricing the asset or liability at the measurement date. GAAP provides for the following three levels to be used to classify our fair value measurements:

Level 1-Financial instruments included in Level 1 are highly liquid instruments with quoted prices in active markets for identical assets or liabilities. These include equity securities traded in active markets and certain U. S. Treasury securities, other governmental obligations, or publicly traded corporate debt securities.

Level 2-Financial instruments reported in Level 2 include those that have pricing inputs that are other than quoted prices in active markets, but which are either directly or indirectly observable as of the reporting date (i.e. prices for similar instruments). Instruments that are generally included in this category are equity securities that are not actively traded, corporate obligations infrequently traded, certain government and municipal obligations, interest rate swaps, certain asset-backed securities (“ABS”),

Index

certain collateralized mortgage obligations (“CMOs”), certain MBS, our derivative instruments, corporate loans and nonrecurring fair value measurements for certain loans held for sale, impaired loans and other real estate owned (“OREO”).

Level 3-Financial instruments reported in Level 3 have little, if any, market activity and are measured using our best estimate of fair value, where the inputs into the determination of fair value are both significant to the fair value measurement and unobservable. These valuations require significant judgment or estimation. Instruments in this category generally include: equity securities with unobservable inputs such as those investments made in our principal capital activities, certain non-agency ABS, I/O Strips, certain municipal and corporate obligations which include ARS, and nonrecurring fair value measurements for certain impaired loans.

GAAP requires that we maximize the use of observable inputs and minimize the use of unobservable inputs when performing our fair value measurements. The availability of observable inputs can vary from instrument to instrument and in certain cases, the inputs used to measure fair value may fall into different levels of the fair value hierarchy. In such cases, an instrument’s level within the fair value hierarchy is based on the lowest level of input that is significant to the fair value measurement. Our assessment of the significance of a particular input to the fair value measurement of an instrument requires judgment and consideration of factors specific to the instrument.

See Notes 5, 6, 7 and 18 of the Notes to Consolidated Financial Statements in this Form 10-K for additional information on our financial instruments.

Level 3 assets and liabilities

As of September 30, 2014, 9% of our total assets and 3% of our total liabilities are instruments measured at fair value on a recurring basis, which are nearly unchanged from such measures as of September 30, 2013.

Financial instruments measured at fair value on a recurring basis categorized as Level 3 amount to \$417 million as of September 30, 2014 and represent 21% of our assets measured at fair value. Of the Level 3 assets as of September 30, 2014, our private equity investments comprise \$212 million, or 51% of the total, and our ARS positions comprise \$201 million, or 48% of the total. Our Level 3 assets decreased \$52 million, or 11% as compared to the September 30, 2013 level, primarily as a result of sales and redemptions of ARS which generated proceeds of \$51.2 million and a gain of \$7.1 million in the year ended September 30, 2014 (see Note 7 of the Notes to Consolidated Financial Statements in this Form 10-K for additional information). Level 3 assets represent 9.4% of total equity as of September 30, 2014, reflecting a decrease from the 11.7% of total equity measure as of September 30, 2013.

Financial instruments which are liabilities categorized as Level 3 amount to \$58 thousand as of September 30, 2014 and represent less than 1% of liabilities measured at fair value, which is unchanged from such measure at September 30, 2013.

Valuation techniques

The fair value for certain of our financial instruments is derived using pricing models and other valuation techniques that involve significant management judgment. The price transparency of financial instruments is a key determinant of the degree of judgment involved in determining the fair value of our financial instruments. Financial instruments for which actively quoted prices or pricing parameters are available will generally have a higher degree of price transparency than financial instruments that are thinly traded or not quoted. In accordance with GAAP, the criteria used to determine whether the market for a financial instrument is active or inactive is based on the particular asset or liability. For equity securities, our definition of actively traded is based on average daily volume and other market trading statistics. We have determined the market for certain other types of financial instruments, including certain

CMOs, ABS, certain collateralized debt obligations and ARS, to be volatile, uncertain or inactive as of both September 30, 2014 and 2013. As a result, the valuation of these financial instruments included significant management judgment in determining the relevance and reliability of market information available. We considered the inactivity of the market to be evidenced by several factors, including a continued decreased price transparency caused by decreased volume of trades relative to historical levels, stale transaction prices and transaction prices that varied significantly either over time or among market makers.

The specific valuation techniques utilized for the categorization of certain financial instruments with the most significant carrying values that are presented in our Consolidated Statements of Financial Condition as of September 30, 2014 are described below.

Index

Trading instruments and trading instruments sold but not yet purchased

Trading securities are comprised primarily of the financial instruments held by our broker-dealer subsidiaries (see Note 6 of the Notes to Consolidated Financial Statements in this Form 10-K for more information). When available, we use quoted prices in active markets to determine the fair value of these securities. Such instruments are classified within Level 1 of the fair value hierarchy. Examples include exchange traded equity securities and liquid government debt securities. As of September 30, 2014, 7% our gross trading security assets and 70% of our gross trading securities sold but not yet purchased, are classified as Level 1 of the fair value hierarchy.

When instruments are traded in secondary markets and quoted market prices do not exist for such securities, we utilize valuation techniques, including matrix pricing, to estimate fair value. Matrix pricing generally utilizes spread-based models periodically re-calibrated to observable inputs such as market trades, or to dealer price bids in similar securities in order to derive the fair value of the instruments. Valuation techniques may also rely on other observable inputs such as yield curves, interest rates and expected principal repayments, and default probabilities. Instruments valued using these inputs are typically classified within Level 2 of the fair value hierarchy. Examples include certain municipal debt securities, corporate debt securities, agency MBS, and restricted equity securities in public companies. We utilize prices from independent services to corroborate our estimate of fair value. Depending upon the type of security, the pricing service may provide a listed price, a matrix price, or use other methods including broker-dealer price quotations. As of September 30, 2014, 93% our gross trading security assets and 30% of our gross trading securities sold but not yet purchased, are classified as Level 2 of the fair value hierarchy.

Positions in illiquid trading securities that do not have readily determinable fair values require significant judgment or estimation. For these securities, we use pricing models, discounted cash flow methodologies, or similar techniques. Assumptions utilized by these techniques include estimates of future delinquencies, loss severities, defaults and prepayments, or redemptions. Securities valued using these techniques are classified within Level 3 of the fair value hierarchy. For certain CMOs, where there has been limited activity or less transparency around significant inputs to the valuation, such as assumptions regarding performance of the underlying mortgages, these securities are currently classified within Level 3 of the fair value hierarchy. As of September 30, 2014, less than 1% of our gross trading security assets, and none of our trading instruments sold but not yet purchased, are classified as Level 3 of the fair value hierarchy.

We enter into derivatives contracts as part of our fixed income operations in either over-the-counter market activities, or through "matched book" activities. See Note 18 of the Notes to Consolidated Financial Statements in this Form 10-K for more information.

Fair values for the interest rate derivative contracts arising from our over-the-counter market activities are obtained from internal pricing models that consider current market trading levels and the contractual prices for the underlying financial instruments, as well as time value, yield curve and other volatility factors underlying the positions. Since our model inputs can be observed in a liquid market and the models do not require significant judgment, such derivative contracts are classified within Level 2 of the fair value hierarchy. We utilize values obtained from third party counterparty derivatives dealers to corroborate the output of our internal pricing models. The fair value of any cash collateral exchanged as part of the interest rate swap contract is netted, by counterparty, against the fair value of the derivative instrument.

Fair value for our matched book derivatives are determined using an internal model which includes inputs from independent pricing sources to project future cash flows under each underlying derivative contract. The cash flows are discounted to determine the present value. Since any changes in fair value are completely offset by an opposite change in the offsetting transaction position, there is no net impact on our Consolidated Statements of Income and Comprehensive Income from changes in the fair value of these derivative instruments. We record the value of each

matched book derivative position held at fair value, as either an asset or an offsetting liability, presented as “derivative instruments associated with offsetting matched book positions” as applicable, on our Consolidated Statements of Financial Condition.

RJ Bank enters into three month forward foreign exchange contracts to hedge the risk related to their investment in their Canadian subsidiary. These derivatives are recorded at fair value on the Consolidated Statements of Financial Condition, the majority of which are designated as net investment hedges. The fair value of RJ Bank’s forward foreign exchange contracts is determined by obtaining valuations from a third party pricing service. These third party valuations are based on observable inputs such as spot rates, foreign exchange rates and both U.S. and Canadian interest rate curves. We validate the observable inputs utilized in the third party valuation model by preparing an independent calculation using a secondary, third party valuation model. These forward foreign exchange contracts are classified within Level 2 of the fair value hierarchy.

Index

Available for sale securities

Available for sale securities are comprised primarily of MBS, CMOs, and other equity securities held predominately by RJ Bank (the “RJ Bank AFS Securities”), and ARS held by a non-broker-dealer subsidiary of RJF (collectively referred to as the “RJF AFS Securities”). Of the RJF AFS Securities, 64% of the portfolio is classified as Level 2 and 36% is classified as Level 3, of the fair value hierarchy.

Debt and equity securities classified as available for sale are reported at fair value with unrealized gains and losses, net of deferred taxes, recorded through other comprehensive (loss) income and thereafter presented in shareholders’ equity as a component of accumulated other comprehensive (loss) income (“AOCI”) unless the loss is considered to be other-than-temporary, in which case the related credit loss portion is recognized as a loss in other revenue. Realized gains and losses on sales of such securities are recognized using the specific identification method and reflected in other revenue in the period they are sold.

The fair value of agency and senior non-agency securities included within the RJ Bank AFS Securities is determined by obtaining third party pricing service bid quotations from two independent pricing services. Third party pricing service bid quotations are based on either current market data, or for any securities traded in markets where the trading activity has slowed such as the CMO market, the most recently available market data. The third party pricing services provide comparable price evaluations utilizing available market data for similar securities. The market data the third party pricing services utilize for these price evaluations includes observable data comprised of benchmark yields, reported trades, broker-dealer quotes, issuer spreads, two-sided markets, benchmark securities, bids, offers, reference data including market research publications, and loan performance experience. In order to validate that the pricing information used by the primary third party pricing service is observable, we request, on a quarterly basis, some of the key market data available for a sample of senior securities and compare this data to that which we observed in our independent accumulation of market information. Securities valued using these valuation techniques are classified within Level 2 of the fair value hierarchy.

For senior non-agency securities within the RJ Bank AFS Securities where a significant difference exists between the primary third party pricing service bid quotation and the secondary third party pricing service, we utilize a discounted cash flow analysis to determine which third party price quote is more representative of fair value under the current market conditions. The fair values for most senior non-agency securities at September 30, 2014 were based on the respective primary third party pricing service bid quotation. Securities measured using these valuation techniques are generally classified within Level 2 of the fair value hierarchy.

ARS are long-term variable rate securities tied to short-term interest rates that were intended to be reset through a “Dutch auction” process, which generally occurs every seven to 35 days. Holders of ARS were previously able to liquidate their holdings to prospective buyers by participating in the auctions. During 2008, the Dutch auction process failed and holders were no longer able to liquidate their holdings through the auction process. The fair value of the ARS holdings is estimated based on internal pricing models. The pricing model takes into consideration the characteristics of the underlying securities, as well as multiple inputs including the issuer and its credit quality, data from any recent trades, the expected timing of redemptions and an estimated yield premium that a market participant would require over otherwise comparable securities to compensate for the illiquidity of the ARS. These inputs require significant management judgment and, accordingly, these securities are classified within Level 3 of the fair value hierarchy.

For any RJF AFS Securities in an unrealized loss position at the reporting period end, we make an assessment whether these securities are impaired on an other-than-temporary basis. In order to evaluate our risk exposure and any potential impairment of these securities, on at least a quarterly basis, we review the characteristics of each security owned such as, where applicable, collateral type, delinquency and foreclosure levels, credit enhancement, projected loan losses,

collateral coverage, the presence of U.S. government or government agency guarantees, and issuer credit rating. The following factors are considered to determine whether an impairment is other-than-temporary: our intention to sell the security, our assessment of whether it is more likely than not that we will be required to sell the security before the recovery of its amortized cost basis, and whether the evidence indicating that we will recover the amortized cost basis of a security in full outweighs evidence to the contrary. Evidence considered in this assessment includes the reasons for the impairment, the severity and duration of the impairment, changes in value subsequent to period end, recent events specific to the issuer or industry, and forecasted performance of the security. Securities on which there is an unrealized loss that is deemed to be other-than-temporary are written-down to fair value with the credit loss portion of the write-down recorded as a realized loss in other revenue and the non-credit portion of the write-down recorded net of deferred taxes in other comprehensive (loss) income and are thereafter presented in equity as a component of AOCI. The credit loss portion of the write-down is the difference between the present value of the cash flows expected to be collected and the amortized cost basis of the security. The previous amortized cost basis of the security less the other-than-temporary impairment recognized in earnings establishes the new cost basis for the security.

Index

For any RJF AFS Securities, we estimate the portion of loss attributable to credit using a discounted cash flow model. For RJ Bank AFS Securities, our discounted cash flow model utilizes relevant assumptions such as prepayment rate, default rate, and loss severity on a loan level basis. These assumptions are subject to change depending on a number of factors such as economic conditions, changes in home prices, and delinquency and foreclosure statistics, among others. Events that may trigger material declines in fair values or additional credit losses for these securities in the future would include, but are not limited to, deterioration of credit metrics, significantly higher levels of default and severity of loss on the underlying collateral, deteriorating credit enhancement and loss coverage ratios, or further illiquidity.

Private equity investments

Private equity investments, held in our Other segment, consist of various direct and third party private equity and merchant banking investments and comprise 51% of all of our Level 3 assets as of September 30, 2014. The valuation of these investments requires significant management judgment due to the absence of quoted market prices, inherent lack of liquidity and long-term nature of these assets. As a result, these values cannot be determined with precision and the calculated fair value estimates may not be realizable in a current sale or immediate settlement of the instrument.

Private equity investments are carried at estimated fair value. They are valued initially at the transaction price until significant transactions or developments indicate that a change in the carrying values of these investments is appropriate. The carrying values of these investments are adjusted based on financial performance, investment-specific events, financing and sales transactions with third parties and/or discounted cash flow models incorporating changes in market outlook. Investments in funds structured as limited partnerships are generally valued based on our proportionate share of the net assets of the partnership as provided by the fund manager. Investments valued using these valuation techniques are classified within Level 3 of the fair value hierarchy.

Goodwill impairment

Goodwill, under GAAP, must be allocated to reporting units and tested for impairment at least annually. The annual goodwill impairment testing involves the application of significant management judgment, especially when estimating the fair value of its reporting units.

We perform goodwill testing on an annual basis or when an event occurs or circumstances change that would more likely than not reduce the fair value of a reporting unit below its carrying value. We have elected December 31 as our annual goodwill impairment evaluation date. During the quarter ended March 31, 2014, we performed a qualitative assessment evaluating the balances as of December 31, 2013 for each reporting unit that includes an allocation of goodwill to determine whether it is more likely than not that the carrying value of such reporting unit, including the recorded goodwill, is in excess of the fair value of the reporting unit. In any instance in which we are unable to qualitatively conclude that it is more likely than not that the fair value of the reporting unit exceeds the reporting unit carrying value including goodwill, a quantitative analysis of the fair value of the reporting unit would be performed. Based upon the outcome of our qualitative assessment, we determined that no quantitative analysis of the fair value of any reporting unit as of December 31, 2013 was required, and we concluded that none of the goodwill allocated to any of our reporting units as of December 31, 2013 was impaired. No events have occurred since December 31, 2013 that would cause us to update our latest annual impairment testing.

Of our total September 30, 2014 goodwill balance of \$295 million: \$230 million arose from our fiscal year 2012 acquisition of Morgan Keegan (now part of RJ&A, see Note 3 of the Notes to Consolidated Financial Statements in this Form 10-K for further information regarding the Morgan Keegan acquisition), \$33 million arose from our fiscal year 2001 acquisition of Goepel McDermid, Inc. (now RJ Ltd.), \$30 million arose from our fiscal year 1999

acquisition of Roney & Co. (now part of RJ&A), and \$2 million arose from our fiscal year 2011 acquisition of Howe Barnes Hofer & Arnett (now a part of RJ&A). This goodwill was allocated to reporting units; \$174.6 million is included in the PCG segment and \$120.9 million is included in the Capital Markets segment.

Deterioration in economic market conditions, especially those impacting revenues reported in our PCG and Capital Markets segments, as well as increased costs arising from the effects of recent regulatory or legislative changes, may result in declines in reporting unit performance beyond management's current expectations. Declines in reporting unit performance, increases in equity capital requirements, or increases in the estimated cost of equity, could cause the estimated fair values of our reporting units or their associated goodwill to decline, which could result in a material impairment charge to earnings in a future period related to some portion of the associated goodwill.

Index

Loss provisions

Loss provisions arising from legal proceedings

The recorded amount of liabilities related to legal proceedings is subject to significant management judgment. For a description of the significant estimates and judgments associated with establishing legal liabilities, see the “Legal liabilities” section of Note 2 of the Notes to Consolidated Financial Statements in this Form 10-K.

Loss provisions arising from operations of our Broker-Dealers

The recorded amount of liabilities associated with brokerage client receivables and loans to financial advisors and certain key revenue producers, is subject to significant management judgment. For a description of the significant estimates and judgments associated with establishing these broker-dealer related liabilities, see the “Brokerage client receivables, loans to financial advisors and allowance for doubtful accounts” section of Note 2 of the Notes to Consolidated Financial Statements in this Form 10-K.

Loan loss provisions arising from operations of RJ Bank

RJ Bank provides an allowance for loan losses which reflects our continuing evaluation of the probable losses inherent in the loan portfolio. Refer to Note 2 of the Notes to Consolidated Financial Statements in this Form 10-K for discussion of RJ Bank’s policies regarding the allowance for loan losses, and refer to Note 9 of the Notes to Consolidated Financial Statements in this Form 10-K for quantitative information regarding the allowance balances as of September 30, 2014.

The provision for loan losses in fiscal year 2014 includes \$1.6 million resulting from the impact of our internal corporate loan classification changes as a result of the banking regulators’ annual Shared National Credit (“SNC”) examination. The SNC exam included a review which represented 83% of the total held for investment corporate portfolio at such time. The impact of the SNC exam results from differences in judgment applicable to a limited number of the credits reviewed in the annual exam. We incorporate all regulatory trends observed during each annual SNC exam into our internal ratings methodology. The limited number of loans with ratings differences, the lengthy period between SNC exams, and the lack of a consistent pattern of credit characteristics leading to the loan ratings differences from year to year will cause the results of any year’s exam to be unpredictable and result in some changes from our internal ratings. Based on these factors, however, we do not believe the SNC exam results to be indicative of current policies resulting in inaccurate loan classifications that need to be changed, rather, are differences in judgment and are not indicative of future trends in the subsequent year. We do not always incorporate loan classification upgrades that result from the SNC exam. Thus, based on this policy, the results of the annual SNC exam on our portfolio may result in an increase to our provision for loan losses for the respective period these results become known. Given the relatively high percentage of SNC loans in our total corporate loan portfolio and the probability that regulators are likely to have a different view on some loans in our portfolio, the impact from each annual SNC exam may be material to any fiscal year’s provision for loan losses should the credit ratings changes resulting from such exam be numerous, significant (meaning more than a one notch classification change), or associated with considerably large loans in our portfolio.

The provision for loan losses in fiscal year 2013 included \$5.6 million resulting from the impact of the respective period’s annual SNC exam. This prior year exam included a review which which represented 80% of the total held for investment corporate loan portfolio at such time.

At September 30, 2014, the amortized cost of all RJ Bank loans was \$11.1 billion and an allowance for loan losses of \$147.6 million was recorded against that balance. The total allowance for loan losses is equal to 1.33% of the amortized cost of the loan portfolio.

The uncertainty of the real estate and credit markets continues to influence the complexity involved in estimating the losses inherent in RJ Bank's loan portfolio. If our underlying assumptions and judgments prove to be inaccurate, the allowance for loan losses could be insufficient to cover actual losses. In such an event, any losses would result in a decrease in our net income as well as a decrease in the level of regulatory capital at RJ Bank.

Index

Income taxes

The objectives of accounting for income taxes are to recognize the amount of taxes payable or refundable for the current year. We utilize the asset and liability method to provide income taxes on all transactions recorded in the consolidated financial statements. This method requires that income taxes reflect the expected future tax consequences of temporary differences between the carrying amounts of assets or liabilities for book and tax purposes. Accordingly, a deferred tax asset or liability for each temporary difference is determined based on the tax rates that we expect to be in effect when the underlying items of income and expense are realized. Judgment is required in assessing the future tax consequences of events that have been recognized in our financial statements or tax returns, including the repatriation of undistributed earnings of foreign subsidiaries. Variations in the actual outcome of these future tax consequences could materially impact our financial position, results of operations, or liquidity. See Note 20 of the Notes to Consolidated Financial Statements in this Form 10-K for further information on our uncertain tax positions.

Effects of recently issued accounting standards, and accounting standards not yet adopted

In March 2013, the FASB issued new guidance intended to clarify the applicable guidance for the release of the cumulative translation adjustment when either an entity ceases to have a controlling financial interest in a subsidiary or involving an equity method investment that is a foreign entity. The new guidance is intended to resolve the diversity in current practice in the accounting for the release of the cumulative translation adjustment into net income for sales or transfers of a controlling financial interest that is in a foreign entity. This new guidance is first effective for our financial report covering the quarter ended December 31, 2014, however early adoption is permitted as long as an entity that adopts the guidance early applies the new guidance as of the beginning of the fiscal year of adoption. Through September 30, 2014, we did not have any transactions with our foreign entities that fell within the scope of this clarifying guidance, therefore we did not adopt this guidance early. Given that this guidance applies to entity specific transactions, we are unable to estimate the financial impact, if any, this clarifying guidance may have on our financial position or results of operations.

In June 2013, the FASB issued new guidance intended to amend the scope, measurement and disclosure requirements for investment companies. The new guidance is intended to change the approach to the investment company assessment, clarify the characteristics of an investment company, require an investment company to measure noncontrolling ownership interests in other investment companies at fair value and requires additional disclosures about the investment company. This new guidance is first effective for our financial report covering the quarter ending December 31, 2014, early adoption is prohibited. We do not anticipate that the adoption of this new guidance will have any material impact on our financial position, results of operations or disclosures.

In January 2014, the FASB issued new guidance which allows investors in Low Income Housing Tax Credit programs that meet specified conditions to present the net tax benefits (net of amortization of the cost of the investment) within income tax expense. The cost of the investments that meet the specified conditions will be amortized in proportion to (and over the same period as) the total expected tax benefits, including tax credits and other tax benefits as they are realized on the tax return. This new guidance is first effective for our financial report covering the quarter ending December 31, 2015, early adoption is permitted. Based upon the nature of our current investments in LIHTC programs, we do not expect to meet the specified conditions which allow for election of this accounting treatment and thus this new guidance is not anticipated to have any impact on our financial position and results of operations.

In January 2014, the FASB issued new guidance which clarifies when banks and similar institutions (creditors) should reclassify mortgage loans collateralized by residential real estate properties from the loan portfolio to OREO. This guidance defines when an in-substance repossession or foreclosure has occurred and when a creditor is considered to have received physical possession of residential real estate property collateralizing a consumer mortgage loan. This new guidance is first effective for our financial report covering the quarter ending December 31, 2015, early adoption

is permitted. We do not anticipate that this new guidance will have any material impact on our financial position and results of operations, however, depending on the materiality upon the adoption of this new guidance, it may impact certain of our OREO disclosures.

In April 2014, the FASB issued new guidance which changes the prior guidance regarding the requirements for reporting discontinued operations. Under the new guidance, a disposal of a component of an entity or a group of components of an entity, are required to be reported in discontinued operations if the disposal represents a strategic shift that has (or will have) a major effect on an entity's operations and financial results when any of the following occurs: 1) the component of an entity or group of components of an entity meets certain criteria to be classified as held for sale. 2) The component of an entity or group of components of an entity is disposed of by sale. 3) The component of an entity or group of components of an entity is disposed of other than by sale (for example by abandonment or in a distribution to owners in a spinoff). The new guidance requires additional disclosures about discontinued operations that meet the above criteria. This new guidance is first effective prospectively, for all disposals of components of an entity that occur commencing with the beginning of our fiscal year 2016, however early adoption is permitted in certain circumstances. To the extent that we have any disposals of an entity or a group of components of an entity that fall

Index

within the scope of this clarifying guidance, we will evaluate the option of adopting this guidance early. Given that this guidance applies to entity specific transactions, we are unable to estimate the impact, if any, this new guidance may have on our financial position or results of operations.

In May 2014, the FASB issued new guidance regarding revenue recognition. The new guidance is a comprehensive new revenue recognition model that requires a company to recognize revenue to depict the transfer of goods or services to a customer at an amount that reflects the consideration it expects to receive in exchange for those goods or services. This new guidance is first effective for our financial report covering the quarter ending December 31, 2017, early adoption is not permitted. Upon adoption, we may use either a full retrospective or a modified retrospective approach with respect to presentation of comparable periods prior to the effective date, we are currently evaluating which transition approach to use. In addition, we are currently evaluating the impact the adoption of this new guidance will have on our financial position and results of operations.

In June 2014, the FASB issued amended guidance regarding “repo-to-maturity” transactions, as well as repurchase agreements and securities lending agreements accounted for as secured borrowings. The new guidance requires a transferor to disclose more information about certain transactions, including those in which it retains substantially all of the exposure to the economic returns of the underlying transferred asset over the transaction’s term. This new guidance is first effective for our interim financial report covering the quarter ending March 31, 2015, early adoption is not permitted. We are currently evaluating the impact the adoption of this new guidance will have on our financial position and results of operations.

In June 2014, the FASB issued amended guidance for the accounting for share-based payments when the terms of an award provide that a performance target could be achieved after the requisite service period. The new guidance requires that a performance target that affects vesting of an award and that could be achieved after the requisite service period be treated as a performance condition. This new guidance is first effective for our interim financial report covering the quarter ending December 31, 2016, early adoption is permitted. We are currently evaluating the impact the adoption of this new guidance will have on our financial position and results of operations.

In August 2014, the FASB issued amended guidance that requires an entity’s management to evaluate whether there are conditions or events, considered in the aggregate, that raise substantial doubt about the entity’s ability to continue as a going concern. The new guidance: (1) provides for a definition of substantial doubt, (2) requires an evaluation every reporting period including interim periods, (3) provides principles for considering the mitigating effect of management’s plans, (4) require certain disclosures when substantial doubt is alleviated as a result of consideration of managements plans, (5) require an express statement and other disclosures when substantial doubt is not alleviated, and (6) require an assessment for a period of one year after the date that the financial statements are issued (or available to be issued). This new guidance is first effective for our interim financial report covering the quarter ending after December 31, 2016, with early adoption permitted. The adoption of this guidance is not anticipated to have any impact on our consolidated financial statements or related disclosures.

In November 2014, the FASB issued amended guidance regarding the accounting for hybrid financial instruments (which in this context would apply to any shares of RJF stock that include embedded derivative features such as conversion rights, redemption rights, voting rights, and liquidation and dividend payment preferences) issued in the form of a share. The new guidance clarifies how current GAAP should be interpreted in evaluating the economic characteristics and risks of a host contract in a hybrid financial instrument that is issued in the form of a share. This new guidance is first effective for our interim financial report covering the quarter ending December 31, 2016, early adoption is permitted. We are currently evaluating the impact the adoption of this new guidance will have on our financial position and results of operations.

In November 2014, the FASB issued guidance that provides an acquired entity with an option to apply pushdown accounting in its separate financial statements in the reporting period in which a change-in-control event occurs. This new guidance is effective on November 18, 2014. After the effective date, an acquired entity can make an election to apply the guidance to future change-in-control events. The adoption of this guidance is not anticipated to have any impact on our consolidated financial statements or related disclosures, but could impact certain separately issued financial statements of our subsidiaries.

Off-Balance Sheet arrangements

Information concerning our off-balance sheet arrangements is included in Note 27 of the Notes to Consolidated Financial Statements in this Form 10-K.

Index

Effects of inflation

Our assets are primarily liquid in nature and are not significantly affected by inflation. However, the rate of inflation affects our expenses, including employee compensation, communications and occupancy, which may not be readily recoverable through charges for services we provide to our clients.

Item 7A. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

RISK MANAGEMENT

Risks are an inherent part of our business and activities. Management of these risks is critical to our fiscal soundness and profitability. Our risk management processes are multi-faceted and require communication, judgment and knowledge of financial products and markets. We have a formal Enterprise Risk Management (“ERM”) program to assess and review aggregate risks across the firm. Our management takes an active role in the ERM process which requires specific administrative and business functions to participate in the identification, assessment, monitoring and control of various risks. The results of this process are extensively documented and reported to executive management and the RJF Audit and Risk Committee of the Board of Directors.

The principal risks involved in our business activities are market, credit, liquidity, operational, and regulatory and legal.

Market risk

Market risk is our risk of loss resulting from changes in interest rates and security prices. We have exposure to market risk primarily through our broker-dealer and banking operations. Our broker-dealer subsidiaries, primarily RJ&A, trade tax-exempt and taxable debt obligations and act as an active market maker in over-the-counter equity securities. In connection with these activities, we maintain inventories in order to ensure availability of securities and to facilitate client transactions. RJ Bank holds investments in MBS, CMOs and other equity securities within its available for sale securities portfolio as well as SBA loan securitizations not yet transferred. We hold certain ARS in a non-broker-dealer subsidiary of RJF. Additionally, primarily within our Canadian broker-dealer subsidiary, we invest in securities for our own proprietary equity investment account.

See Notes 2, 5 and 6 of the Notes to Consolidated Financial Statements in this Form 10-K for information regarding the fair value of trading inventories associated with our broker-dealer client facilitation, market making and proprietary trading activities in addition to RJ Bank’s securitizations. See Note 7 of the Notes to Consolidated Financial Statements in this Form 10-K for information regarding the fair value of available for sale securities.

Changes in value of our trading inventory may result from fluctuations in interest rates, issuers’ perceived or actual ability to meet their repayment obligations, equity prices, conditions impacting the economy as a whole, and the correlation among these factors. We manage our trading inventory by product type and have established trading divisions that have responsibility for each product type. Our primary method of controlling risk in our trading inventory is through the establishment and monitoring of limits on the dollar amount of securities positions that can be entered into and other risk-based limits. Limits are established both for categories of securities (e.g., OTC equities, corporate bonds, municipal bonds) and for individual traders. Position limits in trading inventory accounts are monitored on a daily basis. Consolidated position and exposure reports are prepared and distributed to senior management. Limit violations are carefully monitored. Management also monitors inventory levels and trading results, as well as inventory aging, pricing, concentration and securities ratings. For derivatives, primarily interest rate swaps, we monitor the exposure in our derivatives subsidiary daily based on established limits with respect to a number of factors, including interest rate, spread, ratio, basis, and volatility risk. These exposures are monitored both

on a total portfolio basis and separately for selected maturity periods.

In the normal course of business, we enter into underwriting commitments. RJ&A and RJ Ltd., as a lead, co-lead or syndicate member in the underwriting deal, may be subject to market risk on any unsold shares issued in the offering to which we are committed. Risk exposure is controlled by limiting participation, the deal size or through the syndication process.

Interest rate risk

Trading activities

We are exposed to interest rate risk as a result of our trading inventories (primarily comprised of fixed income instruments) in our capital markets segment, as well as our RJ Bank operations. We actively manage the interest rate risk arising from our fixed income trading securities through the use of hedging techniques that involve swaps, futures and U.S. Treasury obligations.

77

Index

We monitor, on a daily basis, the Value-at-Risk (“VaR”) for all of our trading portfolios. VaR is an appropriate statistical technique for estimating potential losses in trading portfolios due to typical adverse market movements over a specified time horizon with a suitable confidence level.

We apply the Fed’s Market Risk Rule (“MRR”) for the purpose of calculating our capital ratios. The MRR requires us to extend the calculation of VaR for all of our trading portfolios, including equity and derivative instruments.

To calculate VaR, we use historical simulation. This approach assumes that historical changes in market conditions are representative of future changes. The simulation is based upon daily market data for the previous twelve months. VaR is reported at a 99% confidence level based on a one-day time horizon. This means that we could expect to incur losses greater than those predicted by the VaR estimates only once in every 100 trading days, or about 2.5 times a year on average over the course of time.

We have chosen the historical period of twelve months to be representative of the current interest rate and equity markets. We utilize stress testing to complement our VaR analysis so as to measure risk under historical and hypothetical adverse scenarios. VaR results are indicative of relatively recent changes in general interest rates and equity markets and are not designed to capture historical stress periods beyond the twelve month historical period. Back testing procedures performed include comparing projected VaR results to regulatory-defined daily trading losses, which excludes fees, commissions, reserves, net interest income, and intraday trading, as required by the MRR. We then verify that the number of times that regulatory-defined daily trading losses exceed VaR is consistent with our expectations at a 99% confidence level. During the year ended September 30, 2014, the reported regulatory-defined daily loss in our trading portfolios did not exceed the predicted VaR on any trading day.

Should markets suddenly become more volatile, actual trading losses may exceed VaR results presented on a single day and might accumulate over a longer time horizon, such as a number of consecutive trading days. Accordingly, management applies additional controls including position limits, a daily review of trading results, review of the status of aged inventory, independent controls on pricing, monitoring of concentration risk, and review of issuer ratings, as well as stress testing. During volatile markets we may choose to pare our trading inventories to reduce risk.

The following table sets forth the high, low, and daily average VaR for all of our trading portfolios, including fixed income, equity, and derivative instruments, as of the period and dates indicated:

	Year ended September 30, 2014			VaR at September 30,	
	High	Low	Daily Average	2014	2013
Daily VaR	\$2,647	\$464	\$1,449	\$565	\$1,471

The modeling of the risk characteristics of trading positions involves a number of assumptions and approximations. While management believes that its assumptions and approximations are reasonable, there is no uniform industry methodology for estimating VaR, and different assumptions or approximations could produce materially different VaR estimates. As a result, VaR statistics are more reliable when used as indicators of risk levels and trends within a firm than as a basis for inferring differences in risk-taking across firms.

Separately, RJF provides additional market risk disclosures to comply with the “Risk-Based Capital Guidelines: Market Risk” rule released by the Fed, the OCC and the FDIC. The results of the application of this market risk capital rule, also known as Basel 2.5, are available on our website under “Our Company - Financial Reports - Market Risk Rule Disclosure” within 45 days after the end of each of our reporting periods (the information on our website is not incorporated by reference into this report).

As a part of our fixed income public finance operations, RJ&A enters into forward commitments to purchase GNMA or FNMA MBS which are issued on behalf of various state and local HFA (see further description of these activities in the Item 1 Business, Capital Markets, Trading section in this report). These activities result in exposure to interest rate risk. In order to hedge the interest rate risk to which RJ&A would otherwise be exposed between the date of the commitment and the date of sale of the MBS, RJ&A enters into to be announced (“TBA”) security contracts with investors for generic MBS securities at specific rates and prices to be delivered on settlement dates in the future. See Notes 2 and 21 of the Notes to Consolidated Financial Statements in this Form 10-K for additional information regarding these activities and the related balances outstanding as of September 30, 2014.

See Note 18 of the Notes to Consolidated Financial Statements in this Form 10-K for additional information regarding our derivative financial instruments.

Index

Banking operations

RJ Bank maintains an earning asset portfolio that is comprised of C&I loans, tax-exempt loans, SBL, and commercial and residential real estate loans, as well as deposits at other banks, other investments, MBS, CMOs, SBA loan securitizations and a trading portfolio of corporate loans. Those earning assets are primarily funded by RJ Bank's obligations to customers (i.e. customer deposits). Based on its current earning asset portfolio, RJ Bank is subject to interest rate risk. The current economic environment has led to an extended period of low market interest rates. As a result, the majority of RJ Bank's adjustable rate assets and liabilities have experienced a reduction in interest rate yields and costs that reflect these very low market interest rates. During the year, RJ Bank has focused its interest rate risk analysis on the risk of market interest rates rising. RJ Bank analyzes interest rate risk based on forecasted net interest income, which is the net amount of interest received and interest paid, and the net portfolio valuation, both in a range of interest rate scenarios.

One of the objectives of RJ Bank's Asset Liability Management Committee is to manage the sensitivity of net interest income to changes in market interest rates. This committee uses several measures to monitor and limit RJ Bank's interest rate risk including scenario analysis and economic value of equity ("EVE").

Simulation models and estimation techniques are used to assess the sensitivity of the net interest income stream to movements in interest rates. Assumptions about consumer behavior play an important role in these calculations; this is particularly relevant for loans such as mortgages where the client has the right, but not the obligation, to repay before the scheduled maturity. To ensure that RJ Bank is within its limits established for net interest income, a sensitivity analysis of net interest income to interest rate conditions is estimated for a variety of scenarios. RJ Bank utilizes an internally developed asset/liability model using standard industry software to analyze the available data. The model estimates changes in net interest income by calculating interest income and interest expense from existing assets and liabilities using current repricing, prepayment, and volume assumptions. Various interest rate scenarios are modeled in order to determine the effect those scenarios may have on net interest income.

The following table is an analysis of RJ Bank's estimated net interest income over a 12 month period based on instantaneous shifts in interest rates (expressed in basis points) using RJ Bank's own internal asset/liability model:

Instantaneous changes in rate	Net interest income	Projected change in net interest income
	(\$ in thousands)	
+300	\$389,430	8.14%
+200	\$386,727	7.39%
+100	\$385,480	7.04%
0	\$360,117	—
-25	\$350,009	(2.81)%

Refer to the Net Interest section of MD&A, in Item 7 of this report, for a discussion and estimate of the potential favorable impact on RJF's pre-tax income that could result from a 100 basis point instantaneous rise in short-term interest rates applicable to RJF's entire operations.

The EVE analysis is a point in time analysis of current interest-earning assets and interest-bearing liabilities, which incorporates all cash flows over their estimated remaining lives, discounted at current rates. The EVE approach is based on a static balance sheet and provides an indicator of future earnings and capital levels as the changes in EVE indicate the anticipated change in the value of future cash flows. RJ Bank monitors sensitivity to changes in EVE utilizing board approved limits. These limits set a risk tolerance to changing interest rates and assist RJ Bank in determining strategies for mitigating this risk as it approaches these limits.

Edgar Filing: RAYMOND JAMES FINANCIAL INC - Form 10-K

The following table presents an analysis of RJ Bank's estimated EVE sensitivity based on instantaneous shifts in interest rates (expressed in basis points) using RJ Bank's own internal asset/liability model:

Instantaneous changes in rate	Projected change in EVE
+300	(7.02)%
+200	(2.39)%
+100	2.71%
0	—
-25	(2.13)%

Consumer loans	5,037	—	5,037
Total loans held for investment	419,399	9,442,586	9,861,985
Total loans	\$424,021	\$9,479,976	\$9,903,997

(1) Excludes any net unearned income and deferred expenses.

(2) See the "Credit risk" discussion within Item 7A of this report for additional information regarding RJ Bank's interest-only loan portfolio and related repricing schedule.

Equity price risk

We are exposed to equity price risk as a consequence of making markets in equity securities and the investment activities of RJ&A and RJ Ltd. RJ&A's broker-dealer activities are primarily client-driven, with the objective of meeting clients' needs while earning a trading profit to compensate for the risk associated with carrying inventory. RJ Ltd. has a proprietary trading business; the average aggregate inventory of equity securities held for proprietary trading by RJ Ltd. during the year ended September 30, 2014 was CDN \$8.7 million. We attempt to reduce the risk of loss inherent in our inventory of equity securities by monitoring those security positions constantly throughout each

day and establishing position limits.

Foreign exchange risk

We are subject to foreign exchange risk due to certain loans held by RJ Bank denominated in Canadian currency, cash or financial instruments denominated in either euro's or pound sterling that are held by one of our subsidiaries domiciled in Europe, and our investments in various foreign subsidiaries.

80

Index

We have foreign exchange risk in our investment in RJ Ltd., of approximately CDN \$248 million at September 30, 2014, which is not hedged. Foreign exchange gains/losses related to this investment are primarily reflected in other comprehensive (loss) income (“OCI”) on our Consolidated Statements of Income and Comprehensive Income.

To mitigate a portion of our risk associated with certain net investments in foreign subsidiaries, RJ Bank’s U.S. subsidiaries hedge the foreign exchange risk related to their investment in a Canadian subsidiary utilizing short-term, forward foreign exchange contracts. These derivative agreements are accounted for as net investment hedges in the consolidated financial statements and thus have no financial impact. See Note 18 of the Notes to Consolidated Financial Statements in this Form 10-K for further information regarding these derivative contracts.

During most of fiscal year 2014, we had foreign exchange risk associated with Canadian currency denominated loans held by RJ Bank, which were not hedged. Refer to the discussion of foreign currency gains/losses in Item 7: “Management’s Discussion and Analysis of Financial Condition and Results of Operations” in the RJ Bank segment discussion, in this report. During September 2014, RJ Bank transferred these Canadian currency denominated loans to its Canadian subsidiary, whose investment is hedged as described in the preceding paragraph. Accordingly, RJ Bank has only an insignificant exposure to foreign exchange risk as of September 30, 2014.

We have foreign exchange risk associated with our investment in subsidiaries located in the UK, Europe and South America. These investments are not hedged and are not material individually or in the aggregate.

Credit risk

Credit risk is the risk of loss due to adverse changes in a borrower’s, issuer’s or counterparty’s ability to meet its financial obligations under contractual or agreed upon terms. The nature and amount of credit risk depends on the type of transaction, the structure and duration of that transaction, and the parties involved. Credit risk is an integral component of the profit assessment of lending and other financing activities.

We are engaged in various trading and brokerage activities whose counterparties primarily include broker-dealers, banks and other financial institutions. We are exposed to risk that these counterparties may not fulfill their obligations. The risk of default depends on the creditworthiness of the counterparty and/or the issuer of the instrument. We manage this risk by imposing and monitoring individual and aggregate position limits within each business segment for each counterparty, conducting regular credit reviews of financial counterparties, reviewing security and loan concentrations, holding and marking to market collateral on certain transactions and conducting business through clearing organizations, which may guarantee performance.

Our client activities involve the execution, settlement, and financing of various transactions on behalf of our clients. Client activities are transacted on either a cash or margin basis. Credit exposure results from client margin accounts, which are monitored daily and are collateralized. We monitor exposure to industry sectors and individual securities and perform analysis on a regular basis in connection with our margin lending activities. We adjust our margin requirements if we believe our risk exposure is not appropriate based on market conditions. In addition, when clients execute a purchase, we are at some risk that the client will renege on the trade. If this occurs, we may have to liquidate the position at a loss. However, most private clients have available funds in the account before the trade is executed.

We offer loans to financial advisors and certain key revenue producers, primarily for recruiting and retention purposes. We have credit risk and may incur a loss in the event that such borrower declares bankruptcy or is no longer affiliated with us. Historically, such losses have not been significant due to our strong advisor retention and successful collection efforts.

We are subject to concentration risk if we hold large positions, extend large loans to, or have large commitments with a single counterparty, borrower, or group of similar counterparties or borrowers (e.g. in the same industry). Securities purchased under agreements to resell consist primarily of securities issued by the U.S. government or its agencies. Receivables from and payables to clients and stock borrow and lending activities are conducted with a large number of clients and counterparties and potential concentration is carefully monitored. Inventory and investment positions taken and commitments made, including underwritings, may involve exposure to individual issuers and businesses. We seek to limit this risk through careful review of the underlying business and the use of limits established by senior management, taking into consideration factors including the financial strength of the counterparty, the size of the position or commitment, the expected duration of the position or commitment and other positions or commitments outstanding.

The valuation of the non-agency CMOs held as available for sale securities by RJ Bank is impacted by the credit risk associated with the underlying residential loans. Underlying loan characteristics associated with this risk are considered in valuing these

Index

securities. ARS held by a non-broker-dealer subsidiary of RJF is impacted by the credit worthiness of the ARS issuer. See Note 7 of the Notes to Consolidated Financial Statements in this Form 10-K for more information.

RJ Bank has substantial corporate, SBL and residential mortgage loan portfolios. A significant downturn in the overall economy, deterioration in real estate values or a significant issue within any sector or sectors where RJ Bank has a concentration could result in large provisions for loan losses and/or charge-offs.

RJ Bank's strategy for credit risk management includes well-defined credit policies, uniform underwriting criteria, and ongoing risk monitoring and review processes for all corporate, residential and SBL credit exposures. The strategy also includes diversification on a geographic, industry and customer level, regular credit examinations and management reviews of all corporate loans and individual delinquent residential loans. The credit risk management process also includes an annual independent review of the credit risk monitoring process that performs assessments of compliance with corporate and residential mortgage credit policies, risk ratings, and other critical credit information. RJ Bank seeks to identify potential problem loans early, record any necessary risk rating changes and charge-offs promptly and maintain appropriate reserve levels for probable incurred loan losses. RJ Bank utilizes a comprehensive credit risk rating system to measure the credit quality of individual corporate loans and related unfunded lending commitments, including the probability of default and/or loss given default of each corporate loan and commitment outstanding. For its SBL and residential mortgage loans, RJ Bank utilizes the credit risk rating system used by bank regulators in measuring the credit quality of each homogeneous class of loans.

RJ Bank's allowance for loan losses methodology are described in the Critical Accounting Estimates section of this Item 7 and Note 2 of the Notes to Consolidated Financial Statements in this Form 10-K. As RJ Bank's loan portfolio is segregated into six portfolio segments, likewise, the allowance for loan losses is segregated by these same segments. The risk characteristics relevant to each portfolio segment are as follows:

C&I: Loans in this segment are made to businesses and are generally secured by all assets of the business. Repayment is expected from the cash flows of the respective business. Unfavorable economic and political conditions, including the resultant decrease in consumer or business spending, may have an adverse effect on the credit quality of loans in this segment.

CRE: Loans in this segment are primarily secured by income-producing properties. For owner-occupied properties, the cash flows are derived from the operations of the business, and the underlying cash flows may be adversely affected by the deterioration in the financial condition of the operating business. The underlying cash flows generated by non-owner-occupied properties may be adversely affected by increased vacancy and rental rates, which are monitored on a quarterly basis. Adverse developments in either of these areas may have a negative effect on the credit quality of loans in this segment.

CRE construction: Loans in this segment have similar risk characteristics of loans in the CRE segment as described above. In addition, project budget overruns and performance variables related to the contractor and subcontractors may affect the credit quality of loans in this segment. With respect to commercial construction of residential developments, there is also the risk that the builder has a geographical concentration of developments. Adverse developments in all of these areas may significantly affect the credit quality of the loans in this segment.

Tax-exempt: Loans in this segment are made to governmental and nonprofit entities and are generally secured by a pledge of revenue, and in some cases, by a security interest in or a mortgage on the asset being financed. For loans to governmental entities, repayment is expected from a pledge of certain revenues or taxes. For nonprofit entities, repayment is expected from revenues which may include fundraising proceeds. These loans are subject to demographic risk therefore, much of the credit assessment of tax-exempt loans is driven by the entity's revenue base and general economic environment. Adverse developments in either of these areas may have a negative effect on the

credit quality of loans in this segment.

Residential mortgage (includes home equity loans/lines): All of RJ Bank's residential mortgage loans adhere to stringent underwriting parameters pertaining to credit score and credit history, debt-to-income ratio of borrower, LTV, and combined LTV (including second mortgage/home equity loans). RJ Bank does not originate or purchase option adjustable rate mortgage ("ARM") loans with negative amortization, reverse mortgages, or other types of non-traditional loan products. Loans with deeply discounted teaser rates are not originated or purchased. All loans in this segment are collateralized by residential real estate and repayment is primarily dependent on the credit quality of the individual borrower. A decline in the strength of the economy, particularly unemployment rates and housing prices, among other factors, could have a significant effect on the credit quality of loans in this segment.

SBL: Loans in this segment are secured by marketable securities at advance rates consistent with industry standards. These loans are monitored daily for adherence to LTV guidelines and when a loan exceeds the required LTV, a collateral call is

Index

issued. Past due loans are minimal as any past due amounts result in a notice to the client for payment or the potential sale of securities which will bring the loan current and may bring the loan within the prescribed LTV guidelines.

In evaluating credit risk, RJ Bank considers trends in loan performance, the level of allowance coverage relative to similar banking institutions, industry or customer concentrations, the loan portfolio composition and macroeconomic factors. During fiscal year 2014 corporate profit levels continued to improve but have remained weak as compared to historic levels. Unemployment rates have declined, but remain high. Retail sales continue to be sluggish and credit quality trends, while improved in some sectors, remain somewhat tenuous. The volatility in residential home values in certain geographies has continued to have an impact on residential mortgage loan performance. All of these factors have a potentially negative impact on loan performance and net charge-offs. However, during fiscal year 2014, corporate borrowers have continued to access the markets for new equity and debt.

Several factors were taken into consideration in evaluating the allowance for loan losses at September 30, 2014, including the risk profile of the portfolios, net charge-offs during the period, the level of nonperforming loans, and delinquency ratios. RJ Bank also considered the uncertainty related to certain industry sectors and the extent of credit exposure to specific borrowers within the portfolio. RJ Bank further stratified the performing residential mortgage loan portfolio based upon updated LTV estimates with higher reserve percentages allocated to the higher LTV loans. Finally, RJ Bank considered current economic conditions that might impact the portfolio. RJ Bank determined the allowance that was required for specific loan grades based on relative risk characteristics of the loan portfolio. On an ongoing basis, RJ Bank evaluates its methods for determining the allowance for each class of loans and makes enhancements it considers appropriate.

Changes in the allowance for loan losses of RJ Bank are as follows:

	For the year ended September 30,					
	2014	2013	2012	2011	2010	
	(\$ in thousands)					
Allowance for loan losses, beginning of year	\$ 136,501	\$ 147,541	\$ 145,744	\$ 147,084	\$ 150,272	
Provision for loan losses	13,565	2,565	25,894	33,655	80,413	
Charge-offs:						
C&I loans	(1,845)	(813)	(10,486)	(458)	—	
CRE loans	(16)	(9,599)	(2,000)	(15,204)	(56,402)	
Residential mortgage loans	(2,015)	(6,771)	(15,270)	(22,501)	(30,837)	
SBL	—	(254)	(96)	(255)	—	
Total charge-offs	(3,876)	(17,437)	(27,852)	(38,418)	(87,239)	
Recoveries:						
C&I loans	16	117	—	—	—	
CRE loans	80	1,680	1,074	1,670	2,349	
Residential mortgage loans	1,998	2,299	2,543	1,744	1,289	
SBL	35	32	21	9	—	
Total recoveries	2,129	4,128	3,638	3,423	3,638	
Net charge-offs	(1,747)	(13,309)	(24,214)	(34,995)	(83,601)	
Foreign exchange translation adjustment	(745)	(296)	117	—	—	
Allowance for loan losses, end of year	\$ 147,574	\$ 136,501	\$ 147,541	\$ 145,744	\$ 147,084	
Allowance for loan losses to total bank loans outstanding	1.33	% 1.52	% 1.81	% 2.18	% 2.36	%

The primary factors impacting the provision for loan losses during the year were significant loan portfolio growth, which was partially offset by a decrease in corporate criticized loans including the favorable resolution of corporate

problem loans, lower LTV ratios in the residential mortgage loan portfolio, and a reduction in delinquent residential mortgage loans. The allowance for loan losses of \$147.6 million as of September 30, 2014 increased \$11.1 million from the prior year due to significant loan growth, yet reflected the positive impact from improved economic conditions as the allowance for loan losses to total bank loans outstanding declined to 1.33% at September 30, 2014 from 1.52% at September 30, 2013.

The current year's provision for loan loss also includes \$1.6 million resulting from the impact of the banking regulators' annual SNC exam. The prior year's provision for loan losses included \$5.6 million resulting from the impact of the respective period's annual SNC exam (see the "loan loss provisions arising from operations of RJ Bank" section of the Critical Accounting Estimates in this Item 7, for additional information regarding the annual SNC exam).

Index

The following table presents net loan charge-offs and the percentage of net loan charge-offs to the average outstanding loan balances by loan portfolio segment:

	For the year ended September 30,		2013		2012			
	2014	% of avg.	Net loan	% of avg.	Net loan	% of avg.	Net loan	% of avg.
	charge-off	outstanding	charge-off	outstanding	charge-off	outstanding	charge-off	outstanding
	amount	loans	amount	loans	amount	loans	amount	loans
	(\$ in thousands)							
C&I loans	\$ (1,829)	0.03 %	\$ (696)	0.01 %	\$ (10,486)	0.22 %		
CRE loans	64	—	(7,919)	0.73	(926)	0.11		
Residential mortgage loans	(17)	—	(4,472)	0.26	(12,727)	0.73		
SBL	35	—	(222)	0.05	(75)	0.08		
Total	\$ (1,747)	0.02 %	\$ (13,309)	0.15 %	\$ (24,214)	0.32 %		
	For the year ended September 30,		2011		2010			
	Net loan	% of avg.	Net loan	% of avg.	Net loan	% of avg.	Net loan	% of avg.
	charge-off	outstanding	charge-off	outstanding	charge-off	outstanding	charge-off	outstanding
	amount	loans	amount	loans	amount	loans	amount	loans
	(\$ in thousands)							
C&I loans	\$ (458)	0.01 %	\$ —	—	\$ —	—		
CRE loans	(13,534)	1.70	(54,053)	5.56 %	(54,053)	5.56 %		
Residential mortgage loans	(20,757)	1.12	(29,548)	1.34 %	(29,548)	1.34 %		
SBL	(246)	3.55	—	—	—	—		
Total	\$ (34,995)	0.56 %	\$ (83,601)	1.30 %	\$ (83,601)	1.30 %		

The level of charge-off activity is a factor that is considered in evaluating the potential for and severity of future credit losses. The 87% decline in net charge-offs compared to the prior year was primarily attributable to reductions in net charge-offs within the CRE and residential mortgage loan portfolios. The net charge-offs in the residential mortgage loan portfolio in fiscal year 2014 reflect recoveries of \$2 million, which are becoming prevalent in the residential mortgage loan portfolio as home price appreciation over the past several quarters has resulted in loan balances being collected through sale or refinance proceeds that exceed written down balances.

Index

The table below presents nonperforming loans and total allowance for loan losses:

	September 30, 2014		September 30, 2013		September 30, 2012	
	Nonperforming loan balance	Allowance for loan losses balance	Nonperforming loan balance	Allowance for loan losses balance	Nonperforming loan balance	Allowance for loan losses balance
	(in thousands)					
Loans held for investment:						
C&I loans	\$—	\$(103,179)	\$89	\$(95,994)	\$19,517	\$(92,409)
CRE construction loans	—	(1,594)	—	(1,000)	—	(739)
CRE loans	18,876	(25,022)	25,512	(19,266)	8,404	(27,546)

	September 30, 2011		September 30, 2010	
	Nonperforming loan balance	Allowance for loan losses balance	Nonperforming loan balance	Allowance for loan losses balance
	(in thousands)			
Loans held for sale	\$—	\$(5)	\$—	\$(23)
Loans held for investment:				
C&I loans	25,685	(81,267)	—	(60,464)
CRE construction loans	—	(490)	—	(4,473)
CRE loans	15,842	(30,752)	67,901	(47,771)
Residential mortgage loans	91,796	(33,210)	86,082	(34,297)
SBL	—	(20)	—	(56)
Total	\$133,323	\$(145,744)	\$153,983	\$(147,084)
Total nonperforming loans as a % of RJ Bank total loans	1.99	%	2.47	%

The level of nonperforming loans is another indicator of potential future credit losses. The amount of nonperforming loans decreased 21% during the year ended September 30, 2014. This decrease was primarily due to a \$15 million reduction in nonperforming residential mortgage loans and a \$7 million reduction in nonperforming CRE loans. Included in nonperforming residential mortgage loans are \$51 million in loans for which \$27.9 million in charge-offs were previously recorded, resulting in less exposure within the remaining balance.

The nonperforming loans above excludes \$13.5 million, \$10.2 million, \$12.9 million, \$10.3 million, and \$8.2 million as of September 30, 2014, 2013, 2012, 2011 and 2010 respectively, of residential troubled debt restructurings (“TDR”) which were returned to accrual status in accordance with our policy.

Loan underwriting policies

A component of RJ Bank's credit risk management strategy is conservative, well-defined policies and procedures. RJ Bank's underwriting policies for the major types of loans are:

SBL and residential mortgage loan portfolio

RJ Bank's residential mortgage loan portfolio consists of first mortgage loans originated by RJ Bank via referrals from our PCG financial advisors and the general public as well as first mortgage loans purchased by RJ Bank. All of RJ Bank's residential mortgage loans adhere to strict underwriting parameters pertaining to credit score and credit history, debt-to-income ratio of the borrower, LTV, and combined LTV (including second mortgage/home equity loans). Approximately 90% of the residential loans are fully documented loans and 98% of the residential mortgage loan portfolio is owner-occupant borrowers for their primary or second home residences, of which approximately 80% is for their primary residences. Approximately 20% of the first lien residential

Index

mortgage loans are ARMs with interest-only payments based on a fixed rate for an initial period of the loan, typically five to seven years, then become fully amortizing, subject to annual and lifetime interest rate caps. A high percentage of our originated 15 or 30-year fixed-rate mortgage loans are sold in the secondary market. RJ Bank's SBL portfolio is comprised of loans fully collateralized by client's marketable securities and represents approximately 9% of RJ Bank's total loan portfolio. The underwriting policy for RJ Bank's SBL primarily includes a review of collateral, including LTV, with a limited review of repayment history and the debt-to-income ratio of the borrower.

While RJ Bank has chosen not to participate in any government-sponsored loan modification programs, its loan modification policy does take into consideration some of the programs' parameters and supports every effort to assist borrowers within the guidelines of safety and soundness. In general, RJ Bank considers the qualification terms outlined in the government-sponsored programs as well as the affordability test and other factors. RJ Bank retains flexibility to determine the appropriate modification structure and required documentation to support the borrower's current financial situation before approving a modification. Short sales are also used by RJ Bank to mitigate credit losses.

Corporate loan portfolio

RJ Bank's corporate loan portfolio is comprised of approximately 420 borrowers, the majority of which are underwritten, managed and reviewed at RJ Bank's corporate headquarters location, which facilitates close monitoring of the portfolio by credit risk personnel, relationship officers and senior RJ Bank executives. RJ Bank's corporate loan portfolio is diversified among a number of industries in both the U.S. and Canada and comprised of project finance real estate loans, commercial lines of credit and term loans, the majority of which are participations in SNC or other large syndicated loans, and tax-exempt loans. RJ Bank is sometimes involved in the syndication of the loan at inception and some of these loans have been purchased in the secondary trading markets. As the process for evaluating the SNCs or other large syndications is consistent with the process for the other C&I, CRE and CRE construction loans in the portfolio, there is no additional credit risk with syndicated loans as compared to any other C&I, CRE and CRE construction loan in RJ Bank's corporate loan portfolio. RJ Bank's tax-exempt loans are long-term loans to governmental and nonprofit entities. These loans generally have lower overall credit risk, but are subject to other risks that are not usually present with corporate clients including the risk associated with the constituency served by a local government and the risk in ensuring an obligation has appropriate tax treatment. The remainder of the corporate loan portfolio is comprised of smaller participations and direct loans. There are no subordinated loans or mezzanine financings in the corporate loan portfolio.

Regardless of the source, all corporate loans are independently underwritten to RJ Bank credit policies and are subject to loan committee approval, and credit quality is monitored on an on-going basis by RJ Bank's corporate lending staff. RJ Bank credit policies include criteria related to LTV limits based upon property type, single borrower loan limits, loan term and structure parameters (including guidance on leverage, debt service coverage ratios and debt repayment ability), industry concentration limits, secondary sources of repayment, municipality demographics, and other criteria. A large portion of RJ Bank's corporate loans are to borrowers in industries in which we have expertise, through coverage provided by our Capital Markets research analysts. More than half of RJ Bank's corporate borrowers are public companies. RJ Bank's corporate loans are generally secured by all assets of the borrower, in some instances are secured by mortgages on specific real estate, and with respect to tax-exempt loans, are generally secured by a pledge of revenue. In a limited number of transactions, loans in the portfolio are extended on an unsecured basis. In addition, all corporate loans are subject to RJ Bank's regulatory review.

Risk monitoring process

Another component of the credit risk strategy at RJ Bank is the ongoing risk monitoring and review processes for all residential, SBL and corporate credit exposures. There are various other factors included in these processes,

depending on the loan portfolio.

SBL and residential mortgage loans

We track and review many factors to monitor credit risk in RJ Bank's SBL and residential mortgage loan portfolios. The qualitative factors include, but are not limited to: loan performance trends, loan product parameters and qualification requirements, borrower credit scores, occupancy (i.e., owner occupied, second home or investment property), level of documentation, loan purpose, geographic concentrations, average loan size, and loan policy exceptions. These qualitative measures, while considered and reviewed in establishing the allowance for loan losses, have generally not resulted in any quantitative adjustments to RJ Bank's historical loss rates. In addition to historical loss rates, one other quantitative factor utilized for the performing residential mortgage loan portfolio is updated LTV ratios.

RJ Bank obtains the most recently available information (generally on a quarter lag) to estimate current LTV ratios on the individual loans in the performing residential mortgage loan portfolio. Current LTV ratios are estimated based on the initial appraisal obtained at the time of origination, adjusted using relevant market indices for housing price changes that have occurred

Index

since origination. The value of the homes could vary from actual market values due to change in the condition of the underlying property, variations in housing price changes within current valuation indices and other factors.

The current average estimated LTV is approximately 60% for the total residential mortgage loan portfolio. Residential mortgage loans with estimated LTVs between 100% and 120% represent only 2% of the residential mortgage loan portfolio and residential mortgage loans with estimated LTVs in excess of 120% represent less than 1% of the residential mortgage loan portfolio. Credit risk management utilizes this data in conjunction with delinquency statistics, loss experience and economic circumstances to establish appropriate allowance for loan losses for the residential mortgage loan portfolio, which is based upon an estimate for the probability of default and loss given default for each homogeneous class of loans.

The marketable collateral securing RJ Bank's SBL is monitored on a daily basis. Collateral adjustments are made by the borrower as necessary to ensure RJ Bank's loans are adequately secured, resulting in minimizing its credit risk.

Residential mortgage loan delinquency levels are elevated by historical standards at RJ Bank due to the economic downturn and the high level of unemployment, however, the levels have improved during fiscal year 2014. Our SBL portfolio, however, has not experienced high levels of delinquencies to date. At September 30, 2014 and September 30, 2013, there were no delinquent SBL.

At September 30, 2014, loans over 30 days delinquent (including nonperforming loans) decreased to 2.34% of residential mortgage loans outstanding, compared to 2.87% over 30 days delinquent at September 30, 2013. Additionally, our September 30, 2014 percentage compares favorably to the national average for over 30 day delinquencies of 7.31% as most recently reported by the Fed. RJ Bank's significantly lower delinquency rate as compared to its peers is the result of both our uniform underwriting policies and the lack of non-traditional loan products and subprime loans.

The following table presents a summary of delinquent residential mortgage loans:

	Delinquent residential loans (amount)			Delinquent residential loans as a percentage of outstanding loan balances			
	30-89 days	90 days or more	Total ⁽¹⁾	30-89 days	90 days or more	Total ⁽¹⁾	
September 30, 2014							
Residential mortgage loans:							
First mortgage loans	\$4,756	\$35,803	\$40,559	0.27	% 2.07	% 2.34	%
Home equity loans/lines	57	398	455	0.28	% 1.96	% 2.24	%
Total residential mortgage loans	\$4,813	\$36,201	\$41,014	0.27	% 2.06	% 2.34	%
September 30, 2013							
Residential mortgage loans:							
First mortgage loans	\$6,824	\$43,004	\$49,828	0.40	% 2.49	% 2.89	%
Home equity loans/lines	—	372	372	—	1.66	% 1.66	%
Total residential mortgage loans	\$6,824	\$43,376	\$50,200	0.39	% 2.48	% 2.87	%

(1) Comprised of loans which are two or more payments past due as well as loans in process of foreclosure.

To manage and limit credit losses, we maintain a rigorous process to manage our loan delinquencies. With all whole loans purchased generally on a servicing-retained basis and all originated first mortgages serviced by a third party, the primary collection effort resides with the servicer. RJ Bank personnel direct and actively monitor the servicers' efforts through extensive communications regarding individual loan status changes and requirements of timely and appropriate collection or property management actions and reporting, including management of third parties used in the collection process (appraisers, attorneys, etc.). Additionally, every residential mortgage loan over 60 days past due is reviewed by RJ Bank personnel monthly and documented in a written report detailing delinquency information, balances, collection status, appraised value, and other data points. RJ Bank senior management meets monthly to discuss the status, collection strategy and charge-off/write-down recommendations on every residential mortgage loan over 60 days past due. Updated collateral valuations are obtained for loans over 90 days past due and charge-offs are taken on individual loans based on these valuations.

Index

Credit risk is also managed by diversifying the residential mortgage loan portfolio. The geographic concentrations (top five states) of RJ Bank's one-to-four family residential mortgage loans are as follows:

September 30, 2014		September 30, 2013	
(\$ outstanding as a % of RJ Bank total assets)			
2.9	% FL	3.0	%FL
2.0	% CA ⁽¹⁾	2.4	%CA ⁽¹⁾
0.9	% NY	1.2	%NY
0.7	% NJ	0.8	%NJ
0.6	% TX	0.7	%VA

The concentration ratio for the state of California excludes 1.0% for September 30, 2014 and 1.4% for (1) September 30, 2013 for loans purchased from a large investment grade institution that have full repurchase recourse for any delinquent loans.

Loans where borrowers may be subject to payment increases include adjustable rate mortgage loans with terms that initially require payment of interest only. Payments may increase significantly when the interest-only period ends and the loan principal begins to amortize. At September 30, 2014 and September 30, 2013, these loans totaled \$307 million and \$363 million, respectively, or approximately 20% of the residential mortgage loan portfolio during both time periods. At September 30, 2014, the balance of amortizing, former interest-only, loans totaled \$313.6 million. The weighted average number of years before the remainder of the loans, which were still in their interest-only period at September 30, 2014, begins amortizing is 2.6 years. The outstanding balance of loans that were interest-only at origination and based on their contractual terms are scheduled to reprice are as follows:

	September 30, 2014 (in thousands)
One year or less	\$ 195,347
Over one year through two years	9,365
Over two years through three years	7,219
Over three years through four years	23,863
Over four years through five years	22,119
Over five years	49,160
Total outstanding residential interest-only loan balance	\$307,073

A component of credit risk management for the residential portfolio is the LTV and borrower credit score at origination or purchase. The most recent LTV/FICO scores at origination of RJ Bank's residential first mortgage loan portfolio are as follows:

	September 30, 2014	September 30, 2013
Residential first mortgage loan weighted-average LTV/FICO ⁽¹⁾	66%/754	66%/754

(1) At origination. Small group of local loans representing less than 1% of residential portfolio excluded.

Corporate loans

Credit risk in RJ Bank's corporate loan portfolio is monitored on an individual loan basis for trends in borrower operating performance, payment history, credit ratings, collateral performance, loan covenant compliance, annual SNC exam results, municipality demographics, and other factors including industry performance and concentrations. As part of the credit review process the loan grade is reviewed at least quarterly to confirm the appropriate risk rating for each credit. The individual loan ratings resulting from the annual SNC exam are incorporated in RJ Bank's internal loan ratings when the ratings are received and if the SNC rating is lower on an individual loan than RJ Bank's internal

rating, the loan is downgraded. While RJ Bank considers historical SNC exam results in its loan ratings methodology, differences between the SNC exam and internal ratings on individual loans typically arise due to subjectivity of the loan classification process. These differences may result in additional provision for loan losses in periods when SNC exam results are received. See Note 2 of the Notes to Consolidated Financial Statements in this Form 10-K, specifically the bank loans and allowances for losses section, and Critical Accounting Estimates in Item 7 in this report, for additional information on RJ Bank's corporate loan portfolio and allowance for loan loss policies.

At September 30, 2014, other than loans classified as nonperforming, there was one government-guaranteed loan totaling \$124 thousand that was delinquent greater than 30 days.

Index

Credit risk is also managed by diversifying the corporate loan portfolio. RJ Bank's corporate loan portfolio does not contain a significant concentration in any single industry. The industry concentrations (top five categories) of RJ Bank's corporate loans are as follows:

September 30, 2014		September 30, 2013	
(\$ outstanding as a % of RJ Bank total assets)			
3.9	% Pharmaceuticals	3.5	% Media communications
3.6	% Office	3.4	% Business systems and services
3.2	% Automotive/transportation	3.3	% Automotive/transportation
3.2	% Retail real estate	3.1	% Pharmaceuticals
3.0	% Hospitality	3.1	% Retail real estate

Liquidity risk

See the section entitled "Liquidity and capital resources" in Item 7, Management's Discussion and Analysis of Financial Condition and Results of Operations, in this report for more information regarding our liquidity and how we manage liquidity risk.

Operational risk

Operational risk generally refers to the risk of loss resulting from our operations, including, but not limited to, business disruptions, improper or unauthorized execution and processing of transactions, deficiencies in our technology or financial operating systems and inadequacies or breaches in our control processes including cyber security incidents (see the section entitled "Our businesses depend on technology" in Item 1A, Risk Factors in this report for a discussion of certain cyber security risks). We operate different businesses in diverse markets and are reliant on the ability of our employees and systems to process a large number of transactions. These risks are less direct than credit and market risk, but managing them is critical, particularly in a rapidly changing environment with increasing transaction volumes and complexity. In the event of a breakdown or improper operation of systems or improper action by employees, we could suffer financial loss, regulatory sanctions and damage to our reputation. In order to mitigate and control operational risk, we have developed and continue to enhance specific policies and procedures that are designed to identify and manage operational risk at appropriate levels throughout the organization and within such departments as Accounting, Operations, Information Technology, Legal, Compliance, Risk Management and Internal Audit. These control mechanisms attempt to ensure that operational policies and procedures are being followed and that our various businesses are operating within established corporate policies and limits. Business continuity plans exist for critical systems, and redundancies are built into the systems as deemed appropriate.

We have established an Operational Risk Management Committee, which is chaired by our Chief Operating Officer and is comprised of senior managers, to review and address operational risks across our businesses. The committee establishes risk appetite levels for major operational risks, monitors operating unit performance for adherence to defined risk tolerances, and establishes policies for risk management at the enterprise level.

Regulatory and legal risk

We have comprehensive procedures addressing regulatory capital requirements, sales and trading practices, use of and safekeeping of client funds, extension of credit, collection activities, money laundering and record keeping. We have designated Anti-money Laundering Officers in each of our subsidiaries who monitor compliance with regulations adopted under the Bank Secrecy Act and the USA PATRIOT Act. We act as an underwriter or selling group member in both equity and fixed income product offerings. Particularly when acting as lead or co-lead manager, we have financial and legal exposure. To manage this exposure, a committee of senior executives reviews proposed

underwriting commitments to assess the quality of the offering and the adequacy of due diligence investigation.

A Compliance and Standards Committee comprised of senior executives meets monthly to consider policy issues. The committee reviews material client or customer complaints and litigation, as well as issues in operating departments, for the purpose of identifying issues that present risk exposure to either us or our customers. The committee adopts policies to deal with these issues, which are then disseminated throughout our operations.

A Quality of Markets Committee meets regularly to monitor the best execution activities of our trading departments as they relate to customer orders. This committee is comprised of representatives from the OTC Trading, Listed Trading, Options, Municipal

Index

Trading, Taxable Trading, Compliance and Legal Departments and is under the direction of one of our senior officers. This committee reviews reports from the respective departments listed above and recommends action for improvement when necessary.

Our major business units have compliance departments that are responsible for regularly reviewing and revising compliance and supervisory procedures to conform to changes in applicable regulations.

Our banking activities are highly regulated and subject to impact from changes in banking laws and regulations, including unanticipated rulings. Present economic conditions have led to rapid introduction of significant regulatory programs or changes affecting consumer protection and disclosure requirements, financial reporting, and regulatory restructuring. Regulatory requirements including recent changes to consumer and mortgage lending regulations, as well as new regulatory or government programs, are closely monitored and acted upon to ensure a timely response. See further discussion of our risks associated with new regulations, including the Dodd-Frank Act, in Item 1A, "Risk Factors" within this report.

Legal risk includes the risk of PCG client claims, the possibility of sizable adverse legal judgments, exposure to pre-Closing Date litigation matters of Morgan Keegan should Regions fail to honor its indemnification obligations (see Item 3 Legal Proceedings in this report and Note 21 of the Notes to Consolidated Financial Statements in this Form 10-K for further discussion of the Regions indemnification for such matters) and non-compliance with applicable legal and regulatory requirements. We are generally subject to extensive regulation in the different jurisdictions in which we conduct business. Regulatory oversight of the financial services industry has become increasingly demanding over the past several years and we, as well as others in the industry, have been directly affected by this increased regulatory scrutiny.

We have a number of outstanding claims resulting from, among other reasons, market conditions. While these claims may not be the result of any wrongdoing, we do, at a minimum, incur costs associated with investigating and defending against such claims. See further discussion of our accounting policy regarding such matters in the loss provisions arising from legal proceedings section of "Critical Accounting Estimates" contained within Item 7, "Management's Discussion of Analysis of Financial Condition and Results of Operations" in this report and in Note 2 of our Notes to Consolidated Financial Statements within this Form 10-K.

Report of Independent Registered Public Accounting Firm
The Board of Directors and Shareholders
Raymond James Financial, Inc.:

We have audited the accompanying consolidated statements of financial condition of Raymond James Financial, Inc. and subsidiaries (the "Company" or "Raymond James") as of September 30, 2014 and 2013, and the related consolidated statements of income and comprehensive income, changes in shareholders' equity, and cash flows for each of the years in the three-year period ended September 30, 2014. These consolidated financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these consolidated financial statements based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of Raymond James as of September 30, 2014 and 2013, and the results of its operations and its cash flows for each of the years in the three-year period ended September 30, 2014, in conformity with U.S. generally accepted accounting principles.

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), Raymond James' internal control over financial reporting as of September 30, 2014, based on criteria established in Internal Control - Integrated Framework (1992) issued by the Committee of Sponsoring Organizations of the Treadway Commission, and our report dated November 25, 2014 expressed an unqualified opinion on the effectiveness of the Company's internal control over financial reporting.

RAYMOND JAMES FINANCIAL, INC. AND SUBSIDIARIES
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS
September 30, 2014

NOTE 1 – INTRODUCTION AND BASIS OF PRESENTATION

Description of business

Raymond James Financial, Inc. (“RJF”) is a financial holding company headquartered in Florida whose broker-dealer subsidiaries are engaged in various financial service businesses, including the underwriting, distribution, trading and brokerage of equity and debt securities and the sale of mutual funds and other investment products. In addition, other subsidiaries of RJF provide investment management services for retail and institutional clients, corporate and retail banking, and trust services. As used herein, the terms “we,” “our” or “us” refer to RJF and/or one or more of its subsidiaries.

Basis of presentation

The accompanying consolidated financial statements include the accounts of RJF and its consolidated subsidiaries that are generally controlled through a majority voting interest. We consolidate all of our 100% owned subsidiaries. In addition we consolidate any variable interest entity (“VIE”) in which we are the primary beneficiary. Additional information on these VIEs is provided in Note 2 in the section titled, “Evaluation of VIEs to determine whether consolidation is required” and in Note 11. When we do not have a controlling interest in an entity, but we exert significant influence over the entity, we apply the equity method of accounting. All material intercompany balances and transactions have been eliminated in consolidation.

Accounting estimates and assumptions

The preparation of consolidated financial statements in conformity with United States of America (“U.S.”) generally accepted accounting principles (“GAAP”) requires us to make certain estimates and assumptions that affect the reported amounts of assets and liabilities, disclosure of contingent assets and liabilities at the date of the consolidated financial statements, and the reported amounts of revenues and expenses during the reporting period. Actual results could differ from those estimates and could have a material impact on the consolidated financial statements.

Reporting period

Our quarters end on the last day of each calendar quarter.

Fiscal year 2013 acquisition

On December 24, 2012, we completed our acquisition of a 45% interest in ClariVest Asset Management, LLC (“ClariVest”), an acquisition that bolstered our platform in the large-cap investment objective. See Note 3 for additional information.

Fiscal year 2012 acquisition

On April 2, 2012 (the “Closing Date”) RJF completed its acquisition of all of the issued and outstanding shares of Morgan Keegan & Company, Inc. (a broker-dealer hereinafter referred to as “MK & Co.”) and MK Holding, Inc. and certain of its affiliates (collectively referred to hereinafter as “Morgan Keegan”) from Regions Financial Corporation (“Regions”). This acquisition expanded both our private client and our capital markets businesses. We accounted for this acquisition under the acquisition method of accounting with the assets and liabilities of Morgan Keegan recorded

as of the acquisition date at their respective fair values and consolidated in our financial statements, see Note 3 for further information regarding our acquisition of Morgan Keegan. The results of operations of Morgan Keegan have been included in our results prospectively from April 2, 2012.

Significant subsidiaries

As of September 30, 2014, our significant subsidiaries, all wholly owned, include: Raymond James & Associates, Inc. (“RJ&A”) a domestic broker-dealer carrying client accounts, Raymond James Financial Services, Inc. (“RJFS”) an introducing domestic broker-dealer, Raymond James Financial Services Advisors, Inc. (“RJFSA”) a registered investment advisor, Raymond James Ltd. (“RJ Ltd.”) a broker-dealer headquartered in Canada, Eagle Asset Management, Inc. (“Eagle”) a registered investment advisor, and Raymond James Bank, N.A. (“RJ Bank”) a national bank.

Index

Adoption of new accounting guidance

In December 2011, the Financial Accounting Standards Board (“FASB”) issued new guidance requiring additional disclosures regarding the nature of an entity’s rights of setoff and related arrangements associated with its financial instruments and derivative instruments. This guidance was further amended in January 2013. Specifically, this new guidance requires additional information about derivatives, repurchase agreements, reverse repurchase agreements, and securities borrowing and securities lending transactions that are either offset or subject to an enforceable master netting arrangement or similar agreement. This guidance was first effective for our quarter ended December 31, 2013. See Note 19 for these additional disclosures.

In February 2013, the FASB issued new guidance intended to improve the reporting of reclassifications out of accumulated other comprehensive (loss) income (“AOCI”). The new guidance requires us to report the effect of significant reclassifications out of AOCI on the respective line items in net income if the amount being reclassified is required under GAAP to be reclassified in its entirety to net income. For other amounts that are not required under GAAP to be reclassified in their entirety to net income in the same reporting period, we are required to cross-reference other disclosures required under GAAP that provide additional detail about those amounts. This new guidance was first effective for our quarter ended December 31, 2013. See Note 22 for these additional disclosures.

Reclassifications

Certain prior period amounts, none of which are material, have been reclassified to conform to the current year’s presentation.

NOTE 2 – SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Recognition of revenues

Securities commissions & fees

The significant components of our securities commissions and fees revenue include the following:

- Commission revenues and related expenses from securities transactions are recorded on a trade date basis.
- a. Commission revenues are recorded at the amount charged to clients which, in certain cases, may include varying discounts.
 - b. Fee revenues include certain asset-based fees. These fees include trailing commissions from mutual funds and variable annuities/insurance products, which are recorded ratably over the period earned.
 - c. Fee revenues also include the fees earned by financial advisors who provide investment advisory services under various manners of affiliation with us. These fee revenues are computed as either a percentage of the assets in the client account, or a flat periodic fee charged to the client for investment advice. Such fees are earned from the services provided by investment advisor representatives (“IARs”) and registered investment advisors (“RIAs”) who affiliate with us.

Financial advisors may choose to affiliate with us as either an employee of RJ&A, and thus operate under the RJ&A registered investment advisor (“RIA”) license, or as an independent contractor affiliated with RJFS. If affiliated with RJFS, the financial advisor may choose to provide such advisory services either under their own RIA license, or under the RIA license of RJFSA, a wholly owned RIA that exclusively supports the investment advisory activities of

financial advisors affiliated with RJFS.

The revenue recognition and related expense policies associated with the generation of advisory fees from each of these affiliation alternatives are as follows:

i. Investment advisory service fee revenues earned by employee financial advisors (IARs of RJ&A) are presented in securities commissions and fees revenue on a gross basis. The RJ&A IARs are paid compensation which is computed as a percentage of the revenues generated and which is recorded as a component of compensation, commissions and benefits expense.

ii. Investment advisory service fee revenues earned by independent contractors who are registered representatives (“RR”) with RJFS are also registered with RJFSA and offer investment advisory services under RJFSA’s RIA license as an IAR of RJFSA are presented in securities fees and commissions revenue on a gross basis. These financial advisors

100

Index

are paid a portion of the revenues generated which is recorded as a component of compensation, commissions and benefits expense.

Independent RIA firms that are owned and operated by a financial advisor who is an independent contractor registered as a RR with RJFS, may receive administrative and custodial services provided by RJFS as introducing iii. broker-dealer firm to RJ&A. These independent RIA firms operate under their own RIA license and pay a fee for services provided to the RIA and its clients. These fees are recorded in securities commissions and fees revenue, net of the portion of the fees that are remitted to the independent RIA firm.

We may earn fees as a result of providing a custodial platform for unaffiliated independent RIA firms. These independent RIA firms operate under their own RIA license and pay for administrative and other services provided iv. through RJFS. These fees are recorded in securities commissions and fees revenue, net of the portion of the fees that are remitted to the independent RIA firm.

d. Insurance commission revenues and related expenses are recognized when the delivery of the insurance contract is confirmed by the carrier, the premium is remitted to the insurance company and the contract requirements are met.

e. Annuity commission revenues and related expenses are recognized when the signed annuity contract and premium is submitted to the annuity carrier.

Investment banking

Investment banking revenues are recorded at the time a transaction is completed and the related income is reasonably determinable. Investment banking revenues include management fees and underwriting fees, net of reimbursable expenses, earned in connection with the distribution of the underwritten securities, merger and acquisition fees, private placement fees, syndication fees on the sale of low-income housing tax credit fund interests, and limited partnership distributions. Securities received in connection with investment banking transactions are carried at fair value.

We distribute our proprietary equity research products to our client base of institutional investors at no charge.

Investment advisory fees

We provide advice, research and administrative services for clients participating in both our managed and non-discretionary asset-based investment programs. These revenues are generated by our asset management businesses for administering and managing portfolios, funds and separate accounts. These asset management services are provided to individual investment portfolios, mutual funds and managed programs. We earn investment advisory fees based on the value of clients' portfolios which are held in either managed or non-discretionary asset-based programs. Fees are computed based on balances either at the beginning of the quarter, the end of the quarter, or average assets. These fees are recorded ratably over the period earned.

We may earn performance fees from various funds and separate accounts we manage, when their performance exceeds certain specified rates of return. We record performance fee revenues in the period they are specifically quantifiable and are earned. Once realized, such fees are not subject to clawback or reversal.

Account and service fees

Account and service fees primarily include transaction fees, annual account fees, service charges, exit fees, servicing fees, fees generated in lieu of interest income from a multi-bank sweep program with unaffiliated banks, money

market processing and distribution fees and correspondent clearing fees. The annual account fees such as IRA fees and distribution fees are recognized as earned over the term of the contract. The transaction fees are earned and collected from clients as trades are executed. Servicing fees such as omnibus, education and marketing support fees, and no-transaction fee program revenues are paid to us for marketing and administrative services and are recognized as earned. Under clearing agreements, we clear trades for unaffiliated correspondent brokers and retain a portion of commissions as a fee for our services. Correspondent clearing revenues are recorded net of commissions remitted. Total commissions generated by correspondents were \$39.6 million, \$35.5 million, and \$33.5 million and commissions remitted totaled \$36.9 million, \$32.6 million, and \$31.2 million for the years ended September 30, 2014, 2013, and 2012 respectively.

Index

Cash and cash equivalents

Our cash equivalents include money market funds or highly liquid investments with original maturities of 90 days or less, other than those used for trading purposes.

Assets segregated pursuant to regulations and other segregated assets

In accordance with Rule 15c3-3 of the Securities Exchange Act of 1934, RJ&A, as a broker-dealer carrying client accounts, is subject to requirements related to maintaining cash or qualified securities in a segregated reserve account for the exclusive benefit of its clients. In addition, RJ Ltd. is required to hold client Registered Retirement Savings Plan funds in trust. Segregated assets consist of cash and cash equivalents.

RJ Bank maintains interest-bearing bank deposits that are restricted for pre-funding letter of credit draws related to certain syndicated borrowing relationships in which RJ Bank is involved and occasionally pledged as collateral for Federal Home Loan Bank of Atlanta (“FHLB”) advances. In addition, RJ Bank maintains cash in an interest-bearing pass-through account at the Federal Reserve Bank in accordance with Regulation D of the Federal Reserve Act, which requires depository institutions to maintain minimum average reserve balances against its deposits.

Repurchase agreements and other collateralized financings

We purchase securities under short-term agreements to resell (“Reverse Repurchase Agreements”). Additionally, we sell securities under agreements to repurchase (“Repurchase Agreements”). Both Reverse Repurchase Agreements and Repurchase Agreements are accounted for as collateralized financings and are carried at contractual amounts plus accrued interest. Our policy is to obtain possession of collateral with a market value equal to or in excess of the principal amount loaned under the Reverse Repurchase Agreements. To ensure that the market value of the underlying collateral remains sufficient, the securities are valued daily, and cash is obtained from or returned to the counterparty when contractually required. These Reverse Repurchase Agreements may result in credit exposure in the event the counterparty to the transaction is unable to fulfill its contractual obligations. Other collateralized financings include secured call loans receivable held by RJ Ltd. These financings represent loans of excess cash to financial institutions which are fully collateralized by Canadian treasury bills or provincial obligations and bear interest at call loan rates.

Financial instruments owned, financial instruments sold but not yet purchased and fair value

Financial instruments owned and financial instruments sold, but not yet purchased are recorded at fair value. Fair value is defined by GAAP as the exchange price that would be received for an asset or paid to transfer a liability (an exit price) in the principal or most advantageous market for the asset or liability in an orderly transaction between willing market participants on the measurement date.

In determining the fair value of our financial instruments in accordance with GAAP, we use various valuation approaches, including market and/or income approaches. Fair value is a market-based measure considered from the perspective of a market participant. As such, even when assumptions from market participants are not readily available, our own assumptions reflect those that we believe market participants would use in pricing the asset or liability at the measurement date. GAAP provides for the following three levels to be used to classify our fair value measurements:

Level 1-Financial instruments included in Level 1 are highly liquid instruments with quoted prices in active markets for identical assets or liabilities. These include equity securities traded in active markets and certain U. S. Treasury securities, other governmental obligations, or publicly traded corporate debt securities.

Level 2-Financial instruments reported in Level 2 include those that have pricing inputs that are other than quoted prices in active markets, but which are either directly or indirectly observable as of the reporting date (i.e., prices for similar instruments). Instruments that are generally included in this category are equity securities that are not actively traded, corporate obligations infrequently traded, certain government and municipal obligations, interest rate swaps, certain asset-backed securities (“ABS”), certain collateralized mortgage obligations (“CMOs”), certain mortgage-backed securities (“MBS”), our derivative instruments, corporate loans and nonrecurring fair value measurements for certain loans held for sale, impaired loans and other real estate owned (“OREO”).

Level 3-Financial instruments reported in Level 3 have little, if any, market activity and are measured using our best estimate of fair value, where the inputs into the determination of fair value are both significant to the fair value measurement and unobservable. These valuations require significant judgment or estimation. Instruments in this category generally include:

102

Index

equity securities with unobservable inputs such as those investments made in our principal capital activities, certain non-agency ABS, pools of interest-only Small Business Administration (“SBA”) loan strips (“I/O Strips”), certain municipal and corporate obligations which include auction rate securities (“ARS”) and nonrecurring fair value measurements for certain impaired loans.

GAAP requires that we maximize the use of observable inputs and minimize the use of unobservable inputs when performing our fair value measurements. The availability of observable inputs can vary from instrument to instrument and in certain cases, the inputs used to measure fair value may fall into different levels of the fair value hierarchy. In such cases, an instrument’s level within the fair value hierarchy is based on the lowest level of input that is significant to the fair value measurement. Our assessment of the significance of a particular input to the fair value measurement of an instrument requires judgment and consideration of factors specific to the instrument.

We offset our long and short positions for a particular security recorded at fair value as part of our trading instruments (long positions) and trading instruments sold but not yet purchased (short positions), when the long and short positions have identical Committee on Uniform Security Identification Procedures numbers (“CUSIPs”).

Valuation techniques

The fair value for certain of our financial instruments is derived using pricing models and other valuation techniques that involve significant management judgment. The price transparency of financial instruments is a key determinant of the degree of judgment involved in determining the fair value of our financial instruments. Financial instruments for which actively quoted prices or pricing parameters are available will generally have a higher degree of price transparency than financial instruments that are thinly traded or not quoted. In accordance with GAAP, the criteria used to determine whether the market for a financial instrument is active or inactive is based on the particular asset or liability. For equity securities, our definition of actively traded is based on average daily volume and other market trading statistics. We have determined the market for certain other types of financial instruments, including certain CMOs, ABS, certain collateralized debt obligations and ARS, to be volatile, uncertain or inactive as of both September 30, 2014 and 2013. As a result, the valuation of these financial instruments included significant management judgment in determining the relevance and reliability of market information available. We considered the inactivity of the market to be evidenced by several factors, including a continued decreased price transparency caused by decreased volume of trades relative to historical levels, stale transaction prices and transaction prices that varied significantly either over time or among market makers.

The specific valuation techniques utilized for the categorization of financial instruments presented in our Consolidated Statements of Financial Condition are described below:

Trading instruments and trading instruments sold but not yet purchased

Trading instruments are comprised primarily of the financial instruments held by our broker-dealer subsidiaries. These instruments are recorded at fair value with realized and unrealized gains and losses reflected in current period net income.

When available, we use quoted prices in active markets to determine the fair value of our trading securities. Such instruments are classified within Level 1 of the fair value hierarchy. Examples include exchange traded equity securities and liquid government debt securities.

When instruments are traded in secondary markets and quoted market prices do not exist for such securities, we utilize valuation techniques including matrix pricing to estimate fair value. Matrix pricing generally utilizes spread-based models periodically re-calibrated to observable inputs such as market trades or to dealer price bids in similar securities

in order to derive the fair value of the instruments. Valuation techniques may also rely on other observable inputs such as yield curves, interest rates and expected principal repayments and default probabilities. Instruments valued using these inputs are typically classified within Level 2 of the fair value hierarchy. Examples include certain municipal debt securities, corporate debt securities, agency MBS, and restricted equity securities in public companies. We utilize prices from independent services to corroborate our estimate of fair value. Depending upon the type of security, the pricing service may provide a listed price, a matrix price or use other methods including broker-dealer price quotations.

The fair value for SBA loan securitizations is determined by utilizing observable prices obtained from a third party pricing service. The third party pricing service provides comparable price evaluations utilizing observable market data for similar securities. We substantiate the prices obtained from the third party pricing service by comparing such prices for a sample of securities to observable market trades obtained from external sources. The instruments valued using these observable inputs are typically classified within Level 2 of the fair value hierarchy.

103

Index

RJ Bank maintains a trading portfolio of certain corporate loans, that it originates through the primary syndication market. These trading instruments are recognized as of the trade date and are carried at fair value with the related unrealized and realized gains and losses reflected in net trading profit. These trading instruments are valued using quotes from a third party pricing service. These third party pricing service quotes are based on current market data provided by multiple dealers. The instruments are classified within Level 2 of the fair value hierarchy as the market inputs utilized by the third party pricing service are based upon observable inputs.

Positions in illiquid securities that do not have readily determinable fair values require significant judgment or estimation. For these securities we use pricing models, discounted cash flow methodologies or similar techniques. Assumptions utilized by these techniques include estimates of future delinquencies, loss severities, defaults and prepayments or redemptions. Securities valued using these techniques are classified within Level 3 of the fair value hierarchy. For certain CMOs, where there has been limited activity or less transparency around significant inputs to the valuation, such as assumptions regarding performance of the underlying mortgages, these securities are currently classified within Level 3 of the fair value hierarchy.

I/O Strip securities do not trade in an active market with readily observable prices. Accordingly, we use valuation techniques that consider a number of factors including: (a) the original cost of the pooled underlying SBA loans from which the I/O Strip securities were created, and any changes from the original to the hypothetical cost of buying similar loans under current market conditions; (b) seasoning of the underlying SBA loans in the pool that back the I/O strip securities; (c) the type and nature of the pooled SBA loans backing the I/O Strip securities; (d) actual and assumed prepayment rates on the underlying pools of SBA loans; and (e) market data for past trades in comparable I/O Strip securities. Prices from independent sources are used to corroborate our estimates of fair value. Our I/O Strip securities are recorded in "other securities" within our trading instruments on our Consolidated Statements of Financial Condition. These fair value measurements use significant unobservable inputs and accordingly, we classify them as Level 3 of the fair value hierarchy.

Included within trading instruments (or trading instruments sold but not yet purchased) are to be announced ("TBA") security contracts with investors for generic MBS securities at specific rates and prices to be delivered on settlement dates in the future. These TBA's are entered into by RJ&A as a component of a hedging strategy, to hedge interest rate risk that it would otherwise be exposed to as part of a program its fixed income public finance operations offers to certain state and local housing finance agencies ("HFA"). Under this program, RJ&A enters into forward commitments to purchase Government National Mortgage Association ("GNMA") or Federal National Home Mortgage Association ("FNMA") MBS. The MBS securities are issued on behalf of various HFA clients and consist of the mortgages originated through their lending programs. RJ&A's forward GNMA or FNMA MBS purchase commitments arise at the time of the loan reservation for a borrower in the HFA lending program (these loan reservations fix the terms of the mortgage, including the interest rate and maximum principal amount). The underlying terms of the GNMA or FNMA MBS purchase, including the price for the MBS security (which is dependent upon the interest rates associated with the underlying mortgages) are also fixed at loan reservation. Upon acquisition of the MBS security, RJ&A typically sells such security in open market transactions as part of its fixed income operations. Given that the actual principal amount of the MBS security is not fixed and determinable at the date of RJ&A's commitment to purchase, these forward MBS purchase commitments do not meet the definition of a "derivative instrument." These TBA securities are accounted for at fair value and are classified within Level 1 of the fair value hierarchy. The TBA securities may aggregate to either a net asset or net liability at any reporting date, depending upon market conditions. The offsetting purchase commitment is accounted for at fair value and is included in either other assets, or other liabilities, depending upon whether the TBA securities aggregate to a net asset or net liability. The fair value of the purchase commitment is classified within Level 3 of the fair value hierarchy.

Available for sale securities

Available for sale securities are comprised primarily of MBS, CMOs and other equity securities held predominately by RJ Bank (the “RJ Bank AFS Securities”) and ARS held by a non-broker-dealer subsidiary of RJF (collectively referred to as the “RJF AFS Securities”).

Interest on the RJF AFS Securities is recognized in interest income on an accrual basis. For the RJ Bank AFS Securities, discounts are accreted and premiums are amortized as an adjustment to yield over the estimated remaining life of the security. A combination of the level factor and straight-line methods is used for such securities, the effect of which does not differ materially from the effective interest method. When a principal reduction occurs on a RJ Bank AFS Security, any related premium or discount is recognized as an adjustment to yield in the results of operations in the period in which the principal reduction occurs.

Realized gains and losses on sales of any RJF AFS Securities are recognized using the specific identification method and reflected in other revenue in the period they are sold.

Index

Unrealized gains or losses on any RJF AFS Securities, except for those that are deemed to be other-than-temporary, are recorded through other comprehensive (loss) income and are thereafter presented in equity as a component of AOCI.

For any RJF AFS Securities in an unrealized loss position at a reporting period end, we make an assessment whether such securities are impaired on an other-than-temporary basis. In order to evaluate our risk exposure and any potential impairment of these securities, on at least a quarterly basis, we review the characteristics of each security owned such as, where applicable, collateral type, delinquency and foreclosure levels, credit enhancement, projected loan losses, collateral coverage, the presence of U.S. government or government agency guarantees, and issuer credit rating. The following factors are considered in order to determine whether an impairment is other-than-temporary: our intention to sell the security, our assessment of whether it is more likely than not that we will be required to sell the security before the recovery of its amortized cost basis, and whether the evidence indicating that we will recover the amortized cost basis of a security in full outweighs evidence to the contrary. Evidence considered in this assessment includes the reasons for the impairment, the severity and duration of the impairment, changes in value subsequent to period end, recent events specific to the issuer or industry and forecasted performance of the security.

We intend and have the ability to hold the RJF AFS Securities to maturity. We have concluded that it is not more likely than not that we will be required to sell these available for sale securities before the recovery of their amortized cost basis. Those securities whose amortized cost basis we do not expect to recover in full are deemed to be other-than-temporarily impaired and are written down to fair value with the credit loss portion of the write-down recorded as a realized loss in other revenue and the non-credit portion of the write-down recorded, net of deferred taxes, in shareholders' equity as a component of AOCI. The credit loss portion of the write-down is the difference between the present value of the cash flows expected to be collected and the amortized cost basis of the security.

For any RJF AFS Securities, we estimate the portion of loss attributable to credit using a discounted cash flow model. For RJ Bank AFS Securities, our discounted cash flow model utilizes relevant assumptions such as prepayment rate, default rate, and loss severity on a loan level basis. These assumptions are subject to change depending on a number of factors such as economic conditions, changes in home prices, delinquency and foreclosure statistics, among others. Events that may trigger material declines in fair values or additional credit losses for these securities in the future would include, but are not limited to, deterioration of credit metrics, significantly higher levels of default and severity of loss on the underlying collateral, deteriorating credit enhancement and loss coverage ratios, or further illiquidity. Expected principal and interest cash flows on the impaired debt security are discounted using the effective interest rate implicit in the security at the time of acquisition. The previous amortized cost basis of the security less the other-than-temporary impairment ("OTTI") recognized in earnings establishes the new cost basis for the security.

The fair value of agency and senior non-agency securities included within the RJ Bank AFS Securities is determined by obtaining third party pricing service bid quotations from two independent pricing services. Third party pricing service bid quotations are based on either current market data, or for any securities traded in markets where the trading activity has slowed such as the CMO market, the most recently available market data. The third party pricing services provide comparable price evaluations utilizing available market data for similar securities. The market data the third party pricing services utilize for these price evaluations includes observable data comprised of benchmark yields, reported trades, broker-dealer quotes, issuer spreads, two-sided markets, benchmark securities, bids, offers, reference data including market research publications, and loan performance experience. In order to validate that the pricing information used by the primary third party pricing service is observable, we request, on a quarterly basis, some of the key market data available for a sample of senior securities and compare this data to that which we observed in our independent accumulation of market information. Securities valued using these valuation techniques are classified within Level 2 of the fair value hierarchy.

For senior non-agency securities within the RJ Bank AFS Securities where a significant difference exists between the primary third party pricing service bid quotation and the secondary third party pricing service, we utilize a discounted cash flow analysis to determine which third party price quote is more representative of fair value under the current market conditions. Securities measured using these valuation techniques are generally classified within Level 2 of the fair value hierarchy.

ARS are long-term variable rate securities tied to short-term interest rates that were intended to be reset through a “Dutch auction” process, which generally occurs every seven to 35 days. Holders of ARS were at one time able to liquidate their holdings to prospective buyers by participating in the auctions. During 2008, the Dutch auction process failed and holders were no longer able to liquidate their holdings through the auction process. The fair value of the ARS holdings is estimated based on internal pricing models. The pricing model takes into consideration the characteristics of the underlying securities, as well as multiple inputs including the issuer and its credit quality, data from any recent trades, the expected timing of redemptions and an estimated yield premium that a market participant would require over otherwise comparable securities to compensate for the illiquidity of the ARS. These inputs require significant management judgment and accordingly, these securities are classified within Level 3 of the fair value hierarchy.

Index

Derivative contracts

We enter into interest rate swaps and futures contracts either as part of our fixed income business to facilitate client transactions, to hedge a portion of our trading inventory, or to a limited extent for our own account. These derivatives are accounted for as trading account assets or liabilities and recorded at fair value in the Consolidated Statements of Financial Condition. Any realized or unrealized gains or losses are recorded in net trading profits within the Consolidated Statements of Income and Comprehensive Income with any interest earned thereon recorded in interest income. The fair value of any cash collateral exchanged as part of the interest rate swap contract is netted, by-counterparty, against the fair value of the derivative instrument. The fair value of these interest rate derivative contracts is obtained from internal pricing models that consider current market trading levels and the contractual prices for the underlying financial instruments, as well as time value, yield curve and other volatility factors underlying the positions. Since our model inputs can be observed in a liquid market and the models do not require significant judgment, such derivative contracts are classified within Level 2 of the fair value hierarchy. We utilize values obtained from third party derivatives dealers to corroborate the output of our internal pricing models.

We also facilitate matched book derivative transactions through non-broker-dealer subsidiaries, either Raymond James Financial Products, LLC or Morgan Keegan Capital Services, LLC (collectively referred to as the Raymond James matched book swap subsidiaries or "RJSS"). The only difference in the swap businesses conducted by these two subsidiary entities is that they utilize different third party financial institutions to facilitate the offsetting transaction. RJSS enters into derivative transactions (primarily interest rate swaps) with clients of RJ&A. For every derivative transaction RJSS enters into with a client, it enters into an offsetting transaction with terms that mirror the client transaction, with a credit support provider who is a third party financial institution. Any collateral required to be exchanged under these derivative contracts is administered directly by the client and the third party financial institution. RJSS does not hold any collateral, or administer any collateral transactions, related to these instruments. We record the value of each derivative position held at fair value, as either an asset or an offsetting liability, presented as "derivative instruments associated with offsetting matched book positions", as applicable, on our Consolidated Statements of Financial Condition. Fair value is determined using an internal model which includes inputs from independent pricing sources to project future cash flows under each underlying derivative contract. The cash flows are discounted to determine the present value. Since any changes in fair value are completely offset by an opposite change in the offsetting transaction position, there is no net impact on our Consolidated Statements of Income and Comprehensive Income from changes in the fair value of these derivative instruments. RJSS recognizes revenue on derivative transactions on the transaction date, computed as the present value of the expected cash flows RJSS expects to receive from the third party financial institution over the life of the derivative contract. The difference between the present value of these cash flows at the date of inception and the gross amount potentially received is accreted to revenue over the term of the contract. The revenue from these transactions is included within other revenues on our Consolidated Statements of Income and Comprehensive Income.

RJ Bank enters into three-month forward foreign exchange contracts to hedge the risk related to their investment in their Canadian subsidiary. These derivatives are recorded at fair value on the Consolidated Statements of Financial Condition, the majority of which are designated as net investment hedges. The effective portion of the related gain or loss is recorded, net of tax, in shareholders' equity as part of the cumulative translation adjustment component of AOCI with such balance impacting earnings in the event the net investment is sold or substantially liquidated. Gains and losses on the undesignated derivative instruments as well as amounts representing hedge ineffectiveness are recorded in earnings in the Consolidated Statements of Income and Comprehensive Income. Hedge effectiveness is assessed at each reporting period using a method that is based on changes in forward rates. The measurement of hedge ineffectiveness is based on the beginning balance of the foreign net investment at the inception of the hedging relationship and performed using the hypothetical derivative method. However, as the terms of the hedging instrument and hypothetical derivative match at inception, there is no expected ineffectiveness to be recorded in earnings. The fair value of any cash collateral exchanged as part of the forward exchange contracts is netted, by

counterparty, against the fair value of the derivative instrument.

The fair value of RJ Bank's forward foreign exchange contracts is determined by obtaining valuations from a third party pricing service. These third party valuations are based on observable inputs such as spot rates, foreign exchange rates and both U.S. and Canadian interest rate curves. We validate the observable inputs utilized in the third party valuation model by preparing an independent calculation using a secondary, third party valuation model. These forward foreign exchange contracts are classified within Level 2 of the fair value hierarchy.

Private equity investments

Private equity investments are held primarily in our Other segment and consist of various direct and third party private equity and merchant banking investments, employee investment funds, and various private equity funds which we sponsor. Private equity investments include various private equity fund investments including Raymond James Employee Investment Funds I and II

106

Index

(collectively, the “Private Funds”). See Note 11 for further discussion of the consolidation of the Raymond James Employee Investment Funds I and II which are variable interest entities. These Private Funds invest in new and developing companies. Our investments in these Private Funds cannot be redeemed directly with the funds; our investment is monetized through distributions received through the liquidation of the underlying assets of those funds. We estimate that the underlying assets of these funds will be liquidated over the life of these funds (typically 10 to 15 years). Approval by the management of these funds is required for us to sell or transfer these investments. Merchant banking investments include ownership interests in private companies with long-term growth potential. These investments are measured at fair value with any changes recognized in other revenue on our Consolidated Statements of Income and Comprehensive Income.

The valuation of these investments requires significant management judgment due to the absence of quoted market prices, inherent lack of liquidity and long-term nature of these assets. As a result, these values cannot be determined with precision and the calculated fair value estimates may not be realizable in a current sale or immediate settlement of the instrument.

Private equity investments are carried at estimated fair value. They are valued initially at the transaction price until significant transactions or developments indicate that a change in the carrying values of these investments is appropriate. The carrying values of these investments are adjusted based on financial performance, investment-specific events, financing and sales transactions with third parties and/or discounted cash flow models incorporating changes in market outlook. Investments in funds structured as limited partnerships are generally valued based on our proportionate share of the net assets of the partnership as provided by the fund manager. Investments valued using these valuation techniques are classified within Level 3 of the fair value hierarchy.

Other investments

Other investments consist primarily of marketable securities we hold that are associated with a deferred compensation program which was formerly sponsored by MK & Co., term deposits with Canadian financial institutions, or investments in other securities arising from the operations of RJ Ltd., and certain investments in limited partnerships (or funds) for which in a number of instances, one of our affiliates serves as the managing member or general partner (see Note 11 for information regarding such funds).

Certain employees, who were at one-time associated with MK & Co., participate in deferred compensation plans. The balances associated with these plans are invested in certain marketable securities that are held by RJF until the vesting date, typically five years from the date of the deferral. A liability associated with these deferrals is reflected as a component of our accrued compensation, commissions and benefits on our Consolidated Statements of Financial Condition. We use quoted prices in active markets to determine the fair value of these investments. Such instruments are classified within Level 1 of the fair value hierarchy.

Canadian financial institution term deposits are recorded at cost which approximates market value. These investments are classified within Level 1 of the fair value hierarchy. Certain other investments in financial instruments held by RJ Ltd. include non-agency ABS that have little, if any, market activity and are measured using our best estimate of fair value, where the inputs into the determination of fair value are both significant to the fair value measurement and unobservable. These valuations require significant judgment or estimation and are classified within Level 3 of the fair value hierarchy.

The valuation of the investments in limited partnerships and funds requires significant management judgment due to the absence of quoted market prices, inherent lack of liquidity and long-term nature of these assets. As a result, these values cannot be determined with precision and the calculated fair value estimates may not be realizable in a current sale or immediate settlement of the instrument. Such instruments are classified within Level 3 of the fair value

hierarchy.

Brokerage client receivables, loans to financial advisors and allowance for doubtful accounts

Brokerage client receivables include receivables from the clients of our broker-dealer and asset management subsidiaries. The receivables from broker-dealer clients are principally for amounts due on cash and margin transactions and are generally collateralized by securities owned by the clients. The receivables from asset management clients are primarily for accrued investment advisory fees. Both the receivables from the asset management and broker-dealer clients are reported at their outstanding principal balance, adjusted for any allowance for doubtful accounts. When a broker-dealer receivable is considered to be impaired, the amount of the impairment is generally measured based on the fair value of the securities acting as collateral, which is measured based on current prices from independent sources such as listed market prices or broker-dealer price quotations. Securities beneficially owned by customers, including those that collateralize margin or other similar transactions, are not reflected in our Consolidated Statements of Financial Condition (see Note 19 for additional information regarding this collateral).

We offer loans to financial advisors and certain key revenue producers, primarily for recruiting and retention purposes. These loans are generally repaid over a five to eight year period with interest recognized as earned. There is no fee income associated with these loans. We assess future recoverability of these loans through analysis of individual financial advisor production or

107

Index

other performance standards. In the event that the financial advisor is no longer affiliated with us, any unpaid balance of such loan becomes immediately due and payable to us. In determining the allowance for doubtful accounts related to former employees or independent contractors, management primarily considers our historical collection experience as well as other factors including: any amounts due at termination, the reasons for the terminated relationship, and the former financial advisor's overall financial position. When the review of these factors indicates that further collection activity is highly unlikely, the outstanding balance of such loan is written-off and the corresponding allowance is reduced. Based upon the nature of these financing receivables, we do not analyze this asset on a portfolio segment or class basis. Further, the aging of this receivable balance is not a determinative factor in computing our allowance for doubtful accounts, as concerns regarding the recoverability of these loans primarily arise in the event that the financial advisor is no longer affiliated with us. We present the outstanding balance of loans to financial advisors on our Consolidated Statements of Financial Condition, net of their applicable allowances for doubtful accounts. The allowance for doubtful accounts balance associated with all of our loans to financial advisors is \$2.5 million and \$2.8 million at September 30, 2014 and 2013, respectively. Of the September 30, 2014 loans to financial advisors, the portion of the balance associated with financial advisors who are no longer affiliated with us, after consideration of the allowance for doubtful accounts, is approximately \$4.6 million.

Securities borrowed and securities loaned

Securities borrowed and securities loaned transactions are reported as collateralized financings and recorded at the amount of collateral advanced or received. In securities borrowed transactions, we are generally required to deposit cash with the lender. With respect to securities loaned, we generally receive collateral in the form of cash in an amount in excess of the market value of securities loaned. We monitor the market value of securities borrowed and loaned on a daily basis, with additional collateral obtained or refunded as necessary (see Note 19 for additional information regarding this collateral).

Bank loans and allowances for losses

Loans held for investment

Bank loans are comprised of loans originated or purchased by RJ Bank and include commercial and industrial ("C&I") loans, commercial and residential real estate loans, tax-exempt loans, as well as loans which are fully collateralized by the borrower's marketable securities. The loans which we have the intent and the ability to hold until maturity or payoff, are recorded at their unpaid principal balance plus any premium paid in connection with the purchase of the loan, less the allowance for loan losses and any discounts received in connection with the purchase of the loan and net of deferred fees and costs on originated loans. Syndicated loans purchased in the secondary market are recognized as of the trade date. Interest income is recognized on an accrual basis.

Loan origination fees and direct costs, as well as premiums and discounts on loans that are not revolving, are capitalized and recognized in interest income using the interest method. For revolving loans, the straight-line method is used based on the contractual term. Loan commitment fees are generally deferred, and when exercised, recognized as a yield adjustment over the life of the loan.

RJ Bank segregates its loan portfolio into six portfolio segments, C&I, commercial real estate ("CRE"), CRE construction, tax-exempt, residential mortgage and securities based loans ("SBL"). These portfolio segments also serve as the portfolio loan classes for purposes of credit analysis, except for residential mortgage loans which are further disaggregated into residential first mortgage and residential home equity classes.

Loans held for sale

Certain residential mortgage loans originated and intended for sale in the secondary market due to their fixed-rate terms are carried at the lower of cost or estimated fair value. The fair value of the residential mortgage loans held for sale are estimated using observable prices obtained from counterparties for similar loans. These nonrecurring fair value measurements are classified within Level 2 of the fair value hierarchy. Gains and losses on sales of these assets are included as a component of other revenue, while interest collected on these assets is included in interest income. Net unrealized losses are recognized through a valuation allowance by charges to income as a component of other revenue in the Consolidated Statements of Income and Comprehensive Income. Corporate loans, which include C&I, CRE, CRE construction and tax-exempt, are designated as held for investment upon inception and recognized in loans receivable. If we subsequently designate a corporate loan as held for sale, which generally occurs as part of a loan workout situation, we then write down the carrying value of the loan with a partial charge-off, if necessary, to carry it at the lower of cost or estimated fair value.

Index

RJ Bank purchases the guaranteed portions of SBA section 7(a) loans and accounts for these loans in accordance with the policy for loans held for sale. RJ Bank then aggregates SBA loans with similar characteristics into pools for securitization and sale to the secondary market. Individual loans may be sold prior to securitization. The determination of the fair value of the SBA loans depend upon their intended disposition. The fair value of the SBA loans to be individually sold are determined based upon their committed sales price. The fair value of loans to be aggregated into pools for securitization which are committed to be sold, are determined based upon third party price quotes. The fair value of all other SBA loans are determined using a third party pricing service. The prices for the SBA loans, other than those committed to be individually sold, are validated by comparing the third party price quote or the third party pricing service prices, as applicable, for a sample of loans to observable market trades obtained from external sources. Once the loans are securitized into a pool, the respective securities are classified as trading instruments and are carried at fair value based on RJ Bank's intention to sell the securitizations within the near term. Any changes in the fair value of the securitized pools as well as any realized gains or losses earned thereon are reflected in net trading profits. Transfers of the securitizations are all accounted for as sales at settlement date when RJ Bank has surrendered control over the transferred assets. RJ Bank does not retain any interest in the securitizations once they are sold.

Off-balance sheet loan commitments

RJ Bank has outstanding at any time a significant number of commitments to extend credit and other credit-related off-balance sheet financial instruments such as standby letters of credit and loan purchases. RJ Bank's policy is generally to require customers to provide collateral at the time of closing. The amount of collateral obtained, if it is deemed necessary by RJ Bank upon extension of credit, is based on RJ Bank's credit evaluation of the borrower. Collateral held varies but may include assets such as: marketable securities, accounts receivable, inventory, real estate, and income-producing commercial properties. The potential credit loss associated with these off-balance sheet loan commitments is accrued and reflected in other liabilities within the Consolidated Statements of Financial Condition. Refer to the allowance for loan losses and reserve for unfunded lending commitments section that follows for a discussion of the reserve calculation methodology.

RJ Bank recognizes the revenue associated with corporate syndicated standby letters of credit, which is generally received quarterly, on a cash basis, the effect of which does not differ materially from recognizing in the period the fee is earned. Unused corporate line fees are accounted for on an accrual basis.

Nonperforming assets

Nonperforming assets are comprised of both nonperforming loans and OREO. Nonperforming loans represent those loans which have been placed on nonaccrual status and loans which have been restructured in a manner that grant a concession to a borrower experiencing financial difficulties; loans with such restructurings are discussed further below. Additionally, any accruing loans which are 90 days or more past due and in the process of collection are considered nonperforming loans.

Loans of all classes are placed on nonaccrual status when we determine that full payment of all contractual principal and interest is in doubt, or the loan is past due 90 days or more as to contractual interest or principal unless the loan, in our opinion, is well-secured and in the process of collection. When a loan is placed on nonaccrual status, the accrued and unpaid interest receivable is written off against interest income and accretion of the net deferred loan origination fees cease. Interest is recognized using the cash method for SBL and residential (first mortgage and home equity) loans and the cost recovery method for corporate loans thereafter until the loan qualifies for return to accrual status. Loans are returned to an accrual status when the loans have been brought contractually current with the original or amended terms and have been maintained on a current basis for a reasonable period, generally six months.

Other real estate acquired in the settlement of loans, including through, or in lieu of, loan foreclosure, is initially recorded at the lower of cost or fair value less estimated selling costs through a charge to the allowance for loan losses, thus establishing a new cost basis. Subsequent to foreclosure, valuations are periodically performed by RJ Bank and the assets are carried at the lower of the carrying amount or fair value, as determined by a current appraisal, or valuation less estimated costs to sell and are classified as other assets on the Consolidated Statements of Financial Condition. These nonrecurring fair value measurements are classified within Level 2 of the fair value hierarchy. Costs relating to development and improvement of the property are capitalized, whereas those relating to holding the property are charged to operations. Sales of OREO are recorded as of the settlement date and any associated gains or losses are included in other revenue on our Consolidated Statements of Income and Comprehensive Income.

Troubled debt restructurings

A loan restructuring is deemed to be a troubled debt restructuring (“TDR”) if we, for economic or legal reasons related to the borrowers’ financial difficulties, grant a concession we would not otherwise consider. In TDRs, for all classes of loans, the concessions granted, such as interest rate reductions, generally do not reflect current market conditions for a new loan of similar

Index

risk made to another borrower in similar financial circumstances. Other concessions for corporate loans may also include the reduction of the guarantor's liability. For those restructurings of first mortgage and home equity residential mortgage loans which may reflect current market conditions, the concessions granted by RJ Bank are generally interest capitalization, principal forbearance, release of liability ordered under Chapter 7 bankruptcy not reaffirmed by the borrower, or an extension of the interest-only or maturity period. First mortgage and home equity residential mortgage TDRs may be returned to accrual status when there has been a sustained period of six months of satisfactory performance. Corporate TDRs have generally been partially charged-off and, therefore, remain on nonaccrual status until the loan is fully resolved.

Impaired loans

Loans in all classes are considered to be impaired when, based on current information and events, it is probable that RJ Bank will be unable to collect the scheduled payments of principal and interest on a loan when due according to the contractual terms of the loan agreement. Loans that experience insignificant payment delays and payment shortfalls generally are not classified as impaired. RJ Bank determines the significance of payment delays and payment shortfalls on a case-by-case basis, taking into consideration reasons for the delay, the borrower's prior payment record and the amount of the shortfall in relation to the principal and interest owed. For individual loans identified as impaired, impairment is measured based on the present value of expected future cash flows discounted at the loan's effective interest rate and taking into consideration the factors described below in relation to the evaluation of the allowance for loan losses, except that as a practical expedient, RJ Bank measures impairment based on the loan's observable market price, or the fair value of the collateral if the loan is collateral dependent. Impaired loans include all corporate nonaccrual loans, all residential mortgage nonaccrual loans for which a charge-off had previously been recorded, and all loans which have been modified in TDRs. Interest income on impaired loans is recognized consistently with the recognition policy of nonaccrual loans.

Allowance for loan losses and reserve for unfunded lending commitments

RJ Bank maintains an allowance for loan losses to provide for probable losses inherent in RJ Bank's loan portfolio. Loan losses are charged against the allowance when RJ Bank believes the uncollectibility of a loan balance is confirmed. Subsequent recoveries, if any, are credited to the allowance.

RJ Bank has developed policies and procedures for assessing the adequacy of the allowance for loan losses that reflects the assessment of risk considering all available information. In developing this assessment, RJ Bank relies on estimates and exercises judgment in evaluating credit risk. The evaluation is inherently subjective as it requires estimates that are susceptible to significant revision as more information becomes available. Depending on changes in circumstances, future assessments of credit risk may yield materially different results from the prior estimates, which may require an increase or a decrease in the allowance for loan losses.

This allowance for loan loss is comprised of two components: allowances calculated based on formulas for homogenous classes of loans collectively evaluated for impairment, and specific allowances assigned to certain classified loans individually evaluated for impairment. These homogeneous classes are a result of management's disaggregation of the loan portfolio and are comprised of the previously mentioned classes: C&I, CRE, CRE construction, tax-exempt, residential first mortgage, residential home equity, and SBL.

The loans within the corporate classes are assigned to one of several internal loan grades based upon the respective loan's credit characteristics. The loans within the residential first mortgage, residential home equity, and SBL classes are assigned loan grades equivalent to the loan classifications utilized by bank regulators, dependent on their respective likelihood of loss. We assign each loan grade for all loan classes an allowance percentage based on the perceived risk associated with that grade. The allowance for loan losses for all non-impaired loans is then calculated

based on the reserve percentage assigned to the respective loan's class and grade. The allowance for loan losses for all impaired loans (except those nonaccrual residential first mortgage loans which are collectively evaluated for impairment) is based on an individual evaluation of impairment as previously described in the "Impaired loans" section above.

The qualitative and quantitative factors taken into consideration when assigning the loan grades and allowance percentages to the loans within the corporate loan classes include: estimates of borrower default probabilities and collateral values; trends in delinquencies; volume and terms; changes in geographic distribution, updated loan-to-value ("LTV") ratios, lending policies, experience, ability and depth of lending management and other relevant staff, local, regional, national and international economic conditions; concentrations of credit risk; past loss history, Shared National Credit ("SNC") reviews and examination results from bank regulators. Loan grades for individual corporate loans are derived from analyzing two aspects of the risk factors in a particular loan, the obligor rating and the facility (collateral) rating. The obligor rating relates to a borrower's probability of default and the facility rating is utilized to estimate the anticipated loss given default. These two ratings, which are based on RJ Bank's internal

Index

historical loss data or historical long-term industry loss rates where RJ Bank has limited loss history, are considered in combination with certain management adjustments to derive the final corporate loan grades and allowance percentages. Qualitative factors, while considered and reviewed in establishing the allowance for loan losses, have generally not resulted in any significant quantitative adjustments to allowance percentages.

For SBL, residential first mortgage loan and residential home equity loan classes, the qualitative factors considered when assigning allowance percentages include loan performance trends, loan product parameters and qualification requirements, whether the loan is originated or purchased, borrower credit scores at origination, occupancy (i.e., owner occupied, second home or investment property), documentation level, loan purpose, geographic concentrations, average loan size and loan policy exceptions. These qualitative factors, while considered and reviewed in establishing the allowance for loan losses, have generally not resulted in any quantitative adjustments to RJ Bank's historical loss rates.

Historical loss rates, a quantitative factor, is utilized when assigning the allowance percentages for SBL, residential first mortgage loans and residential home equity loans, and are derived from estimates of the probability of default and loss given default (severity). These estimated loss rates are based on RJ Bank's historical loss data, as adjusted by management, from the eight quarters prior to the respective quarter-end. In addition to historical loss rates, one other quantitative factor utilized for the performing residential mortgage loan portfolio is updated LTV ratios. RJ Bank segregates the performing loans in the residential loan classes, on a quarterly basis, based upon updated LTV data. RJ Bank obtains the most recently available information (generally on a quarter-lag) to estimate the current LTV ratios on the individual loans in the residential mortgage loan portfolio. Current LTVs are estimated, on a loan by loan basis, utilizing the initial appraisal obtained at the time of origination, adjusted for housing price changes that have occurred since origination using current valuation indices. The value of the homes could vary from actual market values due to changes in the condition of the underlying property, variations in housing price changes within current valuation indices and other factors. The product of the default and loss severity percentages is then applied to the balance of residential first mortgages and residential home equity loan balances, which have been further stratified by updated LTV in order to calculate the related allowance for loan losses.

As TDRs, regardless of the loan portfolio segment or accrual status, are impaired loans, RJ Bank evaluates its credit risk on an individual loan basis. The amount of impairment recorded on these loans is measured based on the present value of the expected future cash flows discounted at the loan's effective interest rate, or if collateral dependent, based on the fair value of the collateral, less costs to sell. In addition, all redefaults (60 or more days delinquent subsequent to the loan's modification date) on TDRs are factored into each portfolio segments' allowance for loan losses. Qualitative information, such as geographic area and industry for TDRs and redefaulted TDRs, is considered and reviewed in the determination of expected loss rates as discussed above.

RJ Bank reserves for potential losses inherent in its unfunded lending commitments using a methodology similar to that used for loans in the respective portfolio segment, based upon loan grade and expected funding probabilities for fully binding commitments. This will result in some reserve variability over different periods depending upon the mix of the loan portfolio at the time and future funding expectations. All classes of impaired loans which have unfunded lending commitments are analyzed in conjunction with the impaired reserve process described above.

Loan charge-off policies

Corporate loans are monitored on an individual basis, and loan grades are reviewed at least quarterly to ensure they reflect the loan's current credit risk. When RJ Bank determines that it is likely a corporate loan will not be collected in full, the loan is evaluated for potential impairment. After consideration of the borrower's ability to restructure the loan, alternative sources of repayment, and other factors affecting the borrower's ability to repay the debt, the portion of the loan deemed to be a confirmed loss, if any, is charged-off. For collateral-dependent loans secured by real estate, the

amount of the loan considered a confirmed loss and charged-off is generally equal to the difference between the recorded investment in the loan and the collateral's appraised value less estimated costs to sell. In instances where the individual loan under evaluation is agented by another bank, and where the agent bank has not ordered a timely update of an outdated appraisal, RJ Bank may make adjustments to previous appraised values for purposes of calculating specific reserves or taking partial charge-offs. These impaired loans are then considered to be in a workout status and we evaluate, on an ongoing basis, all factors relevant in determining the collectability and fair value of the loan. Appraisals on these impaired loans are obtained early in the impairment process as part of determining fair value and are updated as deemed necessary given the facts and circumstances of each individual situation. Certain factors such as guarantor recourse, additional borrower cash contributions or stable operations will mitigate the need for more frequent than annual appraisals. In its ongoing evaluation of each individual loan, RJ Bank may consider more frequent appraisals in locations where commercial property values are known to be experiencing a greater amount of volatility. For C&I and tax-exempt loans, RJ Bank evaluates all sources of repayment, including the estimated liquidation value of collateral, to arrive at the amount considered to be a loss and charged-off. Corporate banking and credit risk managers also hold a monthly meeting to review criticized loans (loans that

Index

are rated special mention or worse as defined by bank regulators, see Note 9 for further discussion). Additional charge-offs are taken when the value of the collateral changes or there is an adverse change in the expected cash flows.

The majority of RJ Bank's corporate loan portfolio is comprised of participations in either SNCs or other large syndicated loans in the U.S. or Canada. The SNCs are U.S. loan syndications totaling over \$20 million that are shared between three or more regulated institutions. Most SNC loans are reviewed annually by the agent bank's regulator, a process in which the other participating banks have no involvement. Once the SNC annual regulatory review process is complete, RJ Bank receives a summary of the review of these SNC credits from the Office of the Comptroller of the Currency ("OCC"). This summary includes a synopsis of each loan's regulatory classification, loans that are designated for nonaccrual status and directed charge-offs. RJ Bank must be at least as critical with nonaccrual designations, directed charge-offs, and classifications as the OCC. This ensures that each bank participating in a SNC loan rates the loan at least as critical. Any classification changes may impact RJ Bank's reserves and charge-offs during the quarter that the SNC information is received from the OCC, however, these differences in classifications are generally minimal given the size of the SNC loan portfolio. The amount of such adjustments depend upon the classification and whether RJ Bank had the loan classified differently (either more or less critically) than the SNC review findings and, therefore, could result in higher, lower, or no change in loan loss provisions than previously recorded. RJ Bank incorporates into its ratings process any observed regulatory trends in the annual SNC exam process, but there will inherently be differences of opinion on individual credits due to the high degree of judgment involved. With respect to its ongoing credit evaluation process of the SNC portfolio, RJ Bank conforms to what it believes will be the regulators' view of individual credits.

Every residential mortgage loan over 60 days past due is reviewed by RJ Bank personnel monthly and documented in a written report detailing delinquency information, balances, collection status, appraised value and other data points. RJ Bank senior management meets monthly to discuss the status, collection strategy and charge-off/write-down recommendations on every residential mortgage loan over 60 days past due with charge-offs considered on residential mortgage loans once the loans are delinquent 90 days or more and then generally taken before the loan is 120 days past due. A charge-off is taken against the allowance for loan losses for the difference between the loan amount and the amount that RJ Bank estimates will ultimately be collected, based on the value of the underlying collateral less estimated costs to sell. RJ Bank predominantly uses broker price opinions ("BPO") for these valuations as access to the property is restricted during the collection and foreclosure process and there is insufficient data available for a full appraisal to be performed. BPOs contain relevant and timely sale comparisons and listings in the marketplace and, therefore, we have found these BPOs to be reasonable determinants of market value in lieu of appraisals and more reliable than an automated valuation tool or the use of tax assessed values. A full appraisal is obtained post-foreclosure. RJ Bank takes further charge-offs against the owned asset if an appraisal has a lower valuation than the original BPO, but does not reverse previously charged-off amounts if the appraisal is higher than the original BPO. If a loan remains in pre-foreclosure status for more than nine months, an updated valuation is obtained and further charge-offs are taken against the allowance for loan losses, if necessary.

Other assets

RJ Bank carries investments in stock of the FHLB and the Federal Reserve Bank of Atlanta (the "FRB") at cost. These investments are held in accordance with certain membership requirements, are restricted, and lack a market. FHLB and FRB stock can only be sold to the issuer or another member institution at its par value. RJ Bank annually evaluates its holdings in FHLB and FRB stock for potential impairment based upon its assessment of the ultimate recoverability of the par value of the stock. This annual evaluation is comprised of a review of the capital adequacy, liquidity position and the overall financial condition of the FHLB and FRB to determine the impact these factors have on the ultimate recoverability of the par value of the respective stock. Impairment evaluations are performed more frequently if events or circumstances indicate there may be impairment. Any cash dividends received are recognized

as interest income in the Consolidated Statements of Income and Comprehensive Income.

We maintain investments in a significant number of company-owned life insurance policies utilized to fund certain non-qualified deferred compensation plans and other employee benefit plans (see Notes 24 and 25 for information on the non-qualified deferred compensation plans). The life insurance policies are carried at cash surrender value as determined by the insurer. See Note 10 for additional information.

Investments in real estate partnerships held by consolidated variable interest entities

Raymond James Tax Credit Funds, Inc., a wholly owned subsidiary of RJF (“RJTCF”), is the managing member or general partner in low-income housing tax credit (“LIHTC”) funds, some of which require consolidation (refer to the separate discussion below of our policies regarding the evaluation of VIEs to determine if consolidation is required). These funds invest in housing project limited partnerships or limited liability companies (“LLCs”) which purchase and develop affordable housing properties qualifying for federal and state low-income housing tax credits. The balance presented is the investment in project partnership balance of all of the LIHTC fund VIEs which require consolidation. Additional information is presented below and in Note 11.

112

Index

Property and equipment

Property, equipment and leasehold improvements are stated at cost less accumulated depreciation and amortization. Depreciation of assets is primarily provided for using the straight-line method over the estimated useful lives of the assets, which range from two to seven years for software, two to five years for furniture, fixtures and equipment and 10 to 31 years for buildings, building components, building improvements and land improvements. Leasehold improvements are amortized using the straight-line method over the shorter of the remaining lease term or the estimated useful lives of the assets.

Additions, improvements and expenditures that extend the useful life of an asset are capitalized. Expenditures for repairs and maintenance are charged to operations in the period incurred. Gains and losses on disposals of property and equipment are reflected in the Consolidated Statements of Income and Comprehensive Income in the period realized.

Intangible assets

Certain identifiable intangible assets, such as customer relationships, trade names, developed technology we acquire, and non-compete agreements, are amortized over their estimated useful lives on a straight-line method, and are evaluated for potential impairment whenever events or changes in circumstances suggest that the carrying value of an asset or asset group may not be fully recoverable.

The rights to service mortgage loans, known as mortgage servicing rights ("MSRs"), are an intangible asset. Our MSRs arise when RJ Bank sells residential mortgage loans and retains the associated mortgage servicing rights. RJ Bank records the estimated fair value of MSRs and amortizes MSRs in proportion to, and over the period of estimated net servicing revenue. MSRs are assessed for impairment quarterly, based on their fair value, with any impairment recognized in our Consolidated Statements of Income and Comprehensive Income.

Goodwill

Goodwill represents the cost of acquired businesses in excess of the fair value of the related net assets acquired. GAAP does not provide for the amortization of indefinite-life intangible assets such as goodwill. Rather, these assets are subject to an evaluation of potential impairment on an annual basis, or more often if events or circumstances indicate there may be impairment. Goodwill impairment is determined by comparing the estimated fair value of a reporting unit with its respective carrying value. If the estimated fair value exceeds the carrying value, goodwill at the reporting unit level is not deemed to be impaired. However, if the estimated fair value is below carrying value, further analysis is required to determine the amount of the impairment. This further analysis involves assigning tangible assets and liabilities, identified intangible assets and goodwill to reporting units and comparing the fair value of each reporting unit to its carrying amount.

In the course of our evaluation of the potential impairment of goodwill, we may perform either a qualitative or a quantitative assessment. Our qualitative assessment of potential impairment may result in the determination that a quantitative impairment analysis is not necessary. Under this elective process, we assess qualitative factors to determine whether the existence of events or circumstances leads us to a determination that it is more likely than not that the fair value of a reporting unit is less than its carrying amount. If after assessing the totality of events or circumstances, we determine it is more likely than not that the fair value of a reporting unit is greater than its carrying amount, then performing a quantitative analysis is not required. However, if we conclude otherwise, then we perform a quantitative impairment analysis.

If we either choose not to perform a qualitative assessment, or we choose to perform a qualitative assessment but are unable to qualitatively conclude that no impairment has occurred, then we perform a quantitative evaluation. In the case of a quantitative assessment, we estimate the fair value of the reporting unit which the goodwill that is subject to the quantitative analysis is associated (generally defined as the businesses for which financial information is available and reviewed regularly by management) and compare it to the carrying value. If the estimated fair value of a reporting unit is less than its carrying value, we estimate the fair value of all assets and liabilities of the reporting unit, including goodwill. If the carrying value of the reporting unit's goodwill is greater than the estimated fair value, an impairment charge is recognized for the excess.

We have elected December 31 as our annual goodwill impairment evaluation date (see Note 13 for additional information regarding the outcome of our goodwill impairment assessments).

Index

Legal liabilities

We recognize liabilities for contingencies when there is an exposure that, when fully analyzed, indicates it is both probable that a liability has been incurred and the amount of loss can be reasonably estimated. Whether a loss is probable, and if so, the estimated range of possible loss, is based upon currently available information and is subject to significant judgment, a variety of assumptions, and uncertainties. When a range of possible loss can be estimated, we accrue the most likely amount within that range; if the most likely amount of possible loss within that range is not determinable, we accrue a minimum based on the range of possible loss. No liability is recognized for those matters which, in managements judgment, the determination of a reasonable estimate of loss is not possible.

We record liabilities related to legal proceedings in trade and other payables on our Consolidated Statements of Financial Condition. The determination of these liability amounts requires significant judgment on the part of management. Management considers many factors including, but not limited to: the amount of the claim; the amount of the loss in the client's account; the basis and validity of the claim; the possibility of wrongdoing on the part of one of our employees or financial advisors; previous results in similar cases; and legal precedents and case law. Each legal proceeding is reviewed with counsel in each accounting period and the liability balance is adjusted as deemed appropriate by management. Any change in the liability amount is recorded in the consolidated financial statements and is recognized as either a charge, or a credit, to net income in that period. The actual costs of resolving legal proceedings may be substantially higher or lower than the recorded liability amounts for those matters. We expense our cost of defense related to such matters in the period they are incurred.

Share-based compensation

We account for share-based awards through the measurement and recognition of compensation expense for all share-based payment awards made to employees and directors based on estimated fair values. The compensation cost is recognized over the requisite service period of the awards and is calculated as the market value of the awards on the date of the grant. See Note 24 for additional information. In addition, we account for share-based awards to our independent contractor financial advisors in accordance with guidance applicable to accounting for equity instruments that are issued to other than employees for acquiring, or in conjunction with selling, goods or services and guidance applicable to accounting for derivative financial instruments indexed to, and potentially settled in, a company's own stock. Share-based awards granted to our independent contractor financial advisors are measured at their vesting date fair value and their fair value estimated at reporting dates prior to that time. The compensation expense recognized each period is based on the most recent estimated value. Further, we classify these non-employee awards as liabilities at fair value upon vesting, with changes in fair value reported in earnings until these awards are exercised or forfeited. For purposes of measuring compensation expense these awards are revalued at each reporting date. See Note 25 for additional information. Compensation expense is recognized for all share-based compensation with future service requirements over the requisite service period using the straight-line method, and in certain instances, the graded attribution method.

Deferred compensation plans

We maintain various deferred compensation plans for the benefit of certain employees and independent contractors that provide a return to the participant based upon the performance of various referenced investments. For certain of these plans, we invest directly, as a principal in such investments, related to our obligations to perform under the deferred compensation plans (see the "Other Investments" discussion within the financial instruments owned, financial instruments sold but not yet purchased and fair value section of this Note 2 for further discussion of these assets). For other such plans, including our Long Term Incentive Plan ("LTIP") and our Wealth Accumulation Plan, we purchase and hold life insurance on the lives of certain current and former participants to earn a competitive rate of return for participants and to provide a source of funds available to satisfy our obligations under the plan (see Note 10 for

information regarding the carrying value of such policies). Compensation expense is recognized for all awards made under such plans with future service requirements over the requisite service period using the straight-line method. Changes in the value of the company-owned life insurance and other investments, as well as the expenses associated with the related deferred compensation plans, are recorded in compensation, commissions and benefits expense on our Consolidated Statements of Income and Comprehensive Income. See Notes 24 and 25 for additional information.

Leases

We lease office space and equipment under operating leases. We recognize rent expense related to these operating leases on a straight-line basis over the lease term. The lease term commences on the earlier of the date when we become legally obligated for the rent payments or the date on which we take possession of the property. For tenant improvement allowances and rent holidays, we record a deferred rent liability in other liabilities on our Consolidated Statements of Financial Condition and amortize the deferred rent over the lease term as a reduction to rent expense in the Consolidated Statements of Income and Comprehensive Income. In instances where the office space or equipment under an operating lease will be abandoned prior to the expiration of

Index

the lease term (these instances primarily result from the effects of acquisitions), we accrue an estimate of any projected loss in the Consolidated Statements of Income and Comprehensive Income at the time such abandonment is known and any loss is estimable.

Acquisition related expense

Acquisition related expenses are recorded in the Consolidated Statement of Income and Comprehensive Income and include certain incremental expenses associated with our acquisition transactions (predominately associated with our Morgan Keegan acquisition), as well as incremental costs to integrate our operations and those of Morgan Keegan. These costs do not represent recurring costs within the fully integrated combined organization.

Foreign currency translation

We consolidate our foreign subsidiaries and certain joint ventures in which we hold an interest. The statement of financial condition of the subsidiaries and joint ventures we consolidate are translated at exchange rates as of the period end. The statements of income are translated either at an average exchange rate for the period, or in the case of foreign subsidiaries of RJ Bank, at the exchange rate in effect on the date which transactions occur. The gains or losses resulting from translating foreign currency financial statements into U.S. dollars are included in other comprehensive (loss) income and are thereafter presented in equity as a component of AOCI. The translation gains or losses related to RJ Bank's U.S. subsidiaries' net investment in their Canadian subsidiary are tax affected to the extent the Canadian subsidiary's earnings will be repatriated to the U.S.

Income taxes

The objectives of accounting for income taxes are to recognize the amount of taxes payable or refundable for the current year. We utilize the asset and liability method to provide income taxes on all transactions recorded in the consolidated financial statements. This method requires that income taxes reflect the expected future tax consequences of temporary differences between the carrying amounts of assets or liabilities for book and tax purposes. Accordingly, a deferred tax asset or liability for each temporary difference is determined based on the tax rates that we expect to be in effect when the underlying items of income and expense are realized. Judgment is required in assessing the future tax consequences of events that have been recognized in our financial statements or tax returns, including the repatriation of undistributed earnings of foreign subsidiaries. Variations in the actual outcome of these future tax consequences could materially impact our financial position, results of operations, or liquidity. See Note 20 for further information on our income taxes.

Earnings per share ("EPS")

Basic EPS is calculated by dividing earnings available to common shareholders by the weighted-average number of common shares outstanding. Earnings available to common shareholders' represents Net Income Attributable to Raymond James Financial, Inc. reduced by the allocation of earnings and dividends to participating securities. Diluted EPS is similar to basic EPS, but adjusts for the dilutive effect of outstanding stock options by application of the treasury stock method.

Evaluation of VIEs to determine whether consolidation is required

A VIE requires consolidation by the entity's primary beneficiary. Examples of entities that may be VIEs include certain legal entities structured as corporations, partnerships or limited liability companies.

We evaluate all of the entities in which we are involved to determine if the entity is a VIE and if so, whether we hold a variable interest and are the primary beneficiary. We hold variable interests in the following VIE's: Raymond James Employee Investment Funds I and II (the "EIF Funds"), a trust fund established for employee retention purposes ("Restricted Stock Trust Fund"), certain LIHTC funds ("LIHTC Funds"), various other partnerships and LLCs involving real estate ("Other Real Estate Limited Partnerships and LLCs"), certain new market tax credit funds ("NMTC Funds"), and certain funds formed for the purpose of making and managing investments in securities of other entities ("Managed Funds").

Determination of the primary beneficiary of a VIE

We assess VIEs for consolidation when we hold variable interests in the entity. We consolidate the VIEs that are subject to assessment when we are deemed to be the primary beneficiary of the VIE. Other than for the Managed Funds whose process is discussed separately, the process for determining whether we are the primary beneficiary of the VIE is to conclude whether we are a party to the VIE holding a variable interest that meets both of the following criteria: (1) has the power to make decisions that most significantly affect the economic performance of the VIE, and (2) has the obligations to absorb losses or the right to receive benefits that in either case could potentially be significant to the VIE.

Index

EIF Funds

The EIF Funds are limited partnerships for which we are the general partner. The EIF Funds invest in certain of our private equity activities as well as other unaffiliated venture capital limited partnerships. The EIF Funds were established as compensation and retention measures for certain of our key employees. We are deemed to be the primary beneficiary and, accordingly, we consolidate the EIF Funds.

Restricted Stock Trust Fund

We utilize a trust in connection with certain of our restricted stock unit awards. This trust fund was established and funded for the purpose of acquiring our common stock in the open market to be used to settle restricted stock units granted as a retention vehicle for certain employees of our Canadian subsidiary. We are deemed to be the primary beneficiary and, accordingly, consolidate this trust fund.

LIHTC Funds

RJTCF is the managing member or general partner in a number of LIHTC Funds having one or more investor members or limited partners. These low-income housing tax credit funds are organized as LLCs or limited partnerships for the purpose of investing in a number of project partnerships, which are limited partnerships or LLCs that in turn purchase and develop low-income housing properties qualifying for tax credits.

Our determination of the primary beneficiary of each tax credit fund in which RJTCF has a variable interest requires judgment and is based on an analysis of all relevant facts and circumstances, including: (1) an assessment of the characteristics of RJTCF's variable interest and other involvement it has with the tax credit fund, including involvement of related parties and any de facto agents, as well as the involvement of other variable interest holders, namely, limited partners or investor members, and (2) the tax credit funds' purpose and design, including the risks that the tax credit fund was designed to create and pass through to its variable interest holders. In the design of tax credit fund VIEs, the overriding premise is that the investor members invest solely for tax attributes associated with the portfolio of low-income housing properties held by the fund, while RJTCF, as the managing member or general partner of the fund, is responsible for overseeing the fund's operations.

Non-guaranteed low-income housing tax credit funds

As the managing member or general partner of the fund, except for one guaranteed fund discussed below, RJTCF does not provide guarantees related to the delivery or funding of tax credits or other tax attributes to the investor members or limited partners of tax credit funds. The investor member(s) or limited partner(s) of the VIEs bear the risk of loss on their investment. Additionally, under the tax credit funds' designed structure, the investor member(s) or limited partner(s) receive nearly all of the tax credits and tax-deductible loss benefits designed to be delivered by the fund entity, as well as a majority of any proceeds upon a sale of a project partnership held by a tax credit fund (fund level residuals). RJTCF earns fees from the fund for its services in organizing the fund, identifying and acquiring the project partnership investments, ongoing asset management fees, and a share of any residuals arising from sale of project partnerships upon the termination of the fund.

The determination of whether RJTCF is the primary beneficiary of any of the non-guaranteed LIHTC Funds in which it holds a variable interest is primarily dependent upon: (1) the analysis of whether the other variable interest holders in the tax credit fund hold significant participating rights over the activities that most significantly impact the tax credit funds' economic performance, and/or (2) whether RJTCF has an obligation to absorb losses of, or the right to receive benefits from, the tax credit fund VIE which could potentially be significant to the fund.

RJTCF sponsors two general types of non-guaranteed tax credit funds: either non-guaranteed single investor funds, or non-guaranteed multi-investor funds. In single investor funds, RJTCF has concluded that the one single investor member or limited partner in such funds has significant participating rights over the activities that most significantly impact the economics of the fund, resulting in a conclusion of shared power with the limited partner. Therefore RJTCF, as managing member or general partner of such funds, is not the one party with power over such activities and resultantly is not deemed to be the primary beneficiary of such single investor funds and these funds are not consolidated.

In multi-investor funds, RJTCF has concluded that since the participating rights over the activities that most significantly impact the economics of the fund are not held by one single investor member or limited partner, RJTCF is deemed to have the power over such activities. RJTCF then assesses whether its projected benefits to be received from the multi-investor funds, primarily from ongoing asset management fees or its share of any residuals upon the termination of the fund, are potentially

Index

significant to the fund. RJTCF is deemed to be the primary beneficiary, and therefore consolidates, any multi-investor fund for which it concludes that such benefits are potentially significant to the fund.

Among the LIHTC Fund entities evaluated, RJTCF determined that some of the LIHTC Funds it sponsors are not VIEs. These funds are either: (1) funds which RJTCF holds a significant interest (one of which typically holds interests in certain tax credit limited partnerships for less than 90 days, or until beneficial interest in the limited partnership or fund is sold to third parties), or (2) are single investor LIHTC Funds in which RJTCF holds an interest, but the LIHTC Fund does not meet the VIE determination criteria.

Direct investments in LIHTC project partnerships

RJ Bank is the investor member of a LIHTC fund in which a subsidiary of RJTCF is the managing member. This LIHTC fund is an investor member in certain LIHTC project partnerships. We evaluate the appropriate accounting for these investments after aggregating RJ Bank and RJTCF's interests and roles in the LIHTC fund. Since unrelated third parties are the managing member of the investee project partnerships, we have determined that consolidation of these project partnerships is not required; we account for these investments under the equity method. The carrying value of these project partnerships is included in other assets on our Consolidated Statements of Financial Condition.

Guaranteed LIHTC fund

In conjunction with one of the multi-investor tax credit funds in which RJTCF is the managing member, RJTCF has provided the investor members with a guaranteed return on their investment in the fund (the "Guaranteed LIHTC Fund"). As a result of this guarantee obligation, RJTCF has determined that it is the primary beneficiary of, and accordingly consolidates, this guaranteed multi-investor fund.

Other real estate limited partnerships and LLCs

We have a variable interest in several limited partnerships involved in various real estate activities in which one of our subsidiaries is either the general partner or a limited partner. Given that we do not have the power to direct the activities that most significantly impact the economic performance of these partnerships or LLCs, we have determined that we are not the primary beneficiary of these VIEs. Accordingly, we do not consolidate these partnerships or LLCs.

New market tax credit funds

An entity which was at one time an affiliate of Morgan Keegan is the managing member of a number of NMTC Funds. NMTC Funds are organized as LLC's for the purpose of investing in eligible projects in qualified low-income areas or that serve qualified targeted populations. In return for making a qualified equity investment into the NMTC Fund, the Fund's investor member receives tax credits eligible to apply against their federal tax liability. These new market tax credits are taken by the investor member over a seven year period.

Each of these NMTC Funds have one investor member. We have concluded that in each of the NMTC Funds, the investor member of such funds has significant participating rights over the activities that most significantly impact the economics of the NMTC Fund and, therefore, our affiliate as the managing member of the NMTC Fund does not have the power over such activities. Accordingly, we are not deemed to be the primary beneficiary of these NMTC Funds and, therefore, they are not consolidated.

Managed Funds

The Managed Funds are VIEs in which one of our subsidiaries serves as the general partner. The Managed Funds satisfy the conditions for deferral of the determination of who is the primary beneficiary that is performed based upon the assessment of who has the power to direct the activities of the entity that most significantly impact the entity's economic performance and the obligation to absorb losses of the entity that could potentially be significant to the entity. The deferral criteria which the Managed Funds meet are: 1) these funds' primary business activity involves investment in the securities of other entities not under common management for current income, appreciation or both; 2) ownership in the funds is represented by units of investments to which proportionate shares of net assets can be attributed; 3) the assets of the funds are pooled to avail owners of professional management; 4) the funds are the primary reporting entities; and 5) the funds do not have an obligation (explicit or implicit) to fund losses of the entities that could be potentially significant.

Index

For the Managed Funds, our primary beneficiary assessment applies prior accounting guidance which assesses who will absorb a majority of the entity's expected losses, receive a majority of the entity's expected residual returns, or both. Based upon the outcome of our assessments, we have determined that we are not required to consolidate the Managed Funds.

NOTE 3 – ACQUISITIONS

Acquisition during fiscal year 2013

On December 24, 2012, (the "ClariVest Acquisition Date") we completed our acquisition of a 45% interest in ClariVest. On the ClariVest Acquisition Date, we paid approximately \$8.8 million in cash to the sellers for our interest. During fiscal year 2014, we performed an "earn-out" computation based upon the actual earnings of ClariVest during the one year period since the ClariVest Acquisition Date and paid additional cash consideration of approximately \$2 million to the sellers.

As a result of certain protective rights we have under the operating agreement with ClariVest, we are consolidating ClariVest in our financial statements as of the ClariVest Acquisition Date. In addition, a put and call agreement was entered into on the ClariVest Acquisition Date that provides our Eagle subsidiary with various paths to majority ownership in ClariVest, the timing of which would depend upon the financial results of ClariVest's business and the tenure of existing ClariVest management. The results of operations of ClariVest have been included in our results prospectively since December 24, 2012. For purposes of certain acquisition related financial reporting requirements, the ClariVest acquisition is not considered to be material to our overall financial condition.

See Note 13 for information regarding the identifiable intangible assets we recorded as a result of the ClariVest acquisition.

Acquisition during fiscal year 2012

As of the Closing Date, we applied the acquisition method of accounting to our acquisition of Morgan Keegan. In February 2013, we successfully completed the transfer of client accounts from MK & Co. to RJ&A and as a result, commenced operating all of the retained historical MK & Co. operations under one (the RJ&A) platform.

Net assets acquired and consideration paid

Under the terms of the Stock Purchase Agreement (the "SPA"), on the Closing Date RJF paid Regions approximately \$1.2 billion in cash in exchange for the Morgan Keegan shares. This purchase price represented a \$230 million premium over a preliminary estimate of tangible book value at closing of \$970 million. Subsequent to the Closing Date, the parties to the SPA determined the final closing date tangible book value and Regions paid us approximately \$23 million in settlement of the final purchase price. The total cash flow impact during fiscal year 2012 of a use of cash of \$1.1 billion results from the \$1.2 billion cash payment on the Closing Date offset by Morgan Keegan's Closing Date cash balance of \$114 million and the \$23 million purchase price adjustment paid to RJF by Regions resulting from the determination of the Closing Date tangible book value of Morgan Keegan.

Goodwill

The remaining consideration, after adjusting for the identified intangible assets and the net assets and liabilities recorded at fair value, is \$230 million, which represents synergies resulting from combining the businesses, and is allocated to goodwill.

We elected to write-up to fair value, the tax basis of the acquired assets and liabilities assumed. As a result of this tax election, \$65 million of the net deferred tax asset balance of Morgan Keegan as of the Closing Date is included in our allocation to goodwill. The goodwill arising from this transaction is attributable to our private client group and our capital markets segments.

See Note 13 for more information regarding the goodwill and identifiable intangible assets related to this acquisition.

Other items of significance

During April, 2012, and concurrent with the closing of the transaction, RJF made approximately \$136 million of loans to Morgan Keegan financial advisors, issued approximately 1.5 million restricted stock units to certain key Morgan Keegan revenue producers (see Note 24 for additional information on our employee benefit plans) and RJF executed employment agreements with certain key members of the Morgan Keegan management team as part of an employee retention program.

Index

In addition to customary indemnity for breaches of representations and warranties and covenants, the SPA also provides that Regions will indemnify RJF for losses incurred in connection with legal proceedings pending as of the closing date or commenced after the closing date and related to pre-closing matters. With respect to the indemnification pertaining to most breaches of representations and warranties and covenants, there is no indemnification for the first \$9 million of aggregate losses, and thereafter indemnification is subject to a maximum amount equal to 15% of the purchase price. With respect to representations regarding certain fundamental matters and with respect to legal proceedings pending as of the Closing Date, such matters are not subject to any annual indemnification deductible or cap. Indemnification for legal proceedings commenced after the closing is subject to an aggregate annual \$2 million indemnification deductible, after which RJF is entitled to receive the full amount of all such losses incurred in excess of \$2 million, for the three years after the Closing Date.

On the Closing Date, certain subsidiaries of RJF entered into a credit agreement (the “Regions Credit Agreement”) with Regions Bank, an Alabama banking corporation (the “Regions Bank”). On November 14, 2012, the outstanding balance on the Regions Credit Agreement was repaid, and a new credit agreement was executed with Regions Bank. See Note 15 for information regarding this borrowing.

Acquisition related expenses

Acquisition related expenses are recorded in the Consolidated Statement of Income and Comprehensive Income and include certain incremental expenses arising from our acquisitions. Acquisition related expenses in fiscal year 2014 are no longer material for separate disclosure since our integration of Morgan Keegan was substantially complete as of September 30, 2013. In prior years, we incurred the following acquisition related expenses:

	Year ended September 30,	
	2013	2012
	(in thousands)	
Information systems integration and conversion costs ⁽¹⁾	\$33,021	\$14,542
Occupancy and equipment ⁽²⁾	15,999	4,803
Severance ⁽³⁾	12,734	18,729
Temporary services	4,106	1,128
Financial advisory fees	1,176	7,040
Legal	476	2,267
Bridge financing agreement fees	—	5,684
Other integration costs	5,942	5,091
Total acquisition related expenses	\$73,454	\$59,284

(1) Includes equipment costs related to the disposition of information systems equipment, and temporary services incurred specifically related to the information systems conversion.

(2) Includes lease costs associated with the abandonment of certain facilities resulting from the Morgan Keegan acquisition.

(3) Represents all costs associated with eliminating positions as a result of the Morgan Keegan acquisition, partially offset by the favorable impact arising from the forfeiture of any unvested accrued benefits.

Index

NOTE 4 – CASH AND CASH EQUIVALENTS, ASSETS SEGREGATED PURSUANT TO REGULATIONS, AND DEPOSITS WITH CLEARING ORGANIZATIONS

Our cash and cash equivalents, assets segregated pursuant to regulations and other segregated assets, and deposits with clearing organization balances are as follows:

	September 30,	
	2014	2013
	(in thousands)	
Cash and cash equivalents:		
Cash in banks	\$2,195,683	\$2,593,890
Money market fund investments	3,380	2,726
Total cash and cash equivalents ⁽¹⁾	2,199,063	2,596,616
Cash segregated pursuant to federal regulations and other segregated assets ⁽²⁾	2,489,264	4,064,827
Deposits with clearing organizations ⁽³⁾	150,457	126,405
	\$4,838,784	\$6,787,848

The total amounts presented include cash and cash equivalents of \$1.21 billion and \$1.02 billion as of September 30, 2014 and 2013, respectively, which are either held directly by RJF in depository accounts at third party financial institutions, held in a depository account at RJ Bank, or are otherwise invested by one of our subsidiaries on behalf of RJF, all of which are available without restrictions.

Consists of cash maintained in accordance with Rule 15c3-3 under the Securities Exchange Act of 1934. RJ&A as a broker-dealer carrying client accounts, is subject to requirements related to maintaining cash or qualified securities in segregated reserve accounts for the exclusive benefit of its' clients. Additionally, RJ Ltd. is required to hold client Registered Retirement Savings Plan funds in trust.

Consists of deposits of cash and cash equivalents or other short-term securities held by other clearing organizations or exchanges.

We had \$800 thousand in transfers of financial instruments from Level 1 to Level 2 during the year ended September 30, 2014. These transfers were a result of a decrease in availability and reliability of the observable inputs utilized in the respective instruments' fair value measurement. We had \$1.3 million in transfers of financial (1) instruments from Level 2 to Level 1 during the year ended September 30, 2014. These transfers were a result of an increase in availability and reliability of the observable inputs utilized in the respective instruments' fair value measurement. Our policy is that the end of each respective quarterly reporting period determines when transfers of financial instruments between levels are recognized.

(2) Where permitted, we have elected to net derivative receivables and derivative payables and the related cash collateral received and paid when a legally enforceable master netting agreement exists. See Note 19 for additional information regarding offsetting financial instruments.

(3) Includes \$58 million of Jefferson County, Alabama Limited Obligation School Warrants ARS.

(4) The portion of these investments we do not own is approximately \$55 million as of September 30, 2014 and are included as a component of noncontrolling interest in our Consolidated Statements of Financial Condition. The weighted average portion we own is approximately \$157 million or 74% of the total private equity investments of \$212 million included in our Consolidated Statements of Financial Condition.

Other investments include \$144 million of financial instruments that are related to MK & Co.'s obligations to (5) perform under certain of its historic deferred compensation plans (see Note 2 and Note 24 for further information regarding these plans).

Includes forward commitments to purchase GNMA or FNMA MBS arising from our fixed income public finance (6) operations (see Note 21 for additional information regarding these commitments) and to a much lesser extent, other certain commitments.

(7) Includes individual loans classified as held for sale, which were recorded at a fair value lower than cost.

Represents the fair value of foreclosed properties which were measured at a fair value subsequent to their initial (8) classification as OREO. The recorded value in the Consolidated Statements of Financial Condition is net of the estimated selling costs.

We had \$860 thousand transfers of financial instruments from Level 1 to Level 2 during the year ended September 30, 2013. These transfers were a result of a decrease in availability and reliability of the observable inputs utilized in the respective instruments' fair value measurement. We had \$401 thousand in transfers of financial instruments (1) from Level 2 to Level 1 during the year ended September 30, 2013. These transfers were a result of an increase in availability and reliability of the observable inputs utilized in the respective instruments' fair value measurement. Our policy is that the end of each respective quarterly reporting period determines when transfers of financial instruments between levels are recognized.

(2) Where permitted, we have elected to net derivative receivables and derivative payables and the related cash collateral received and paid when a legally enforceable master netting agreement exists. See Note 19 for additional information regarding offsetting financial instruments.

(3) Includes \$54 million of Jefferson County, Alabama Limited Obligation School Warrants ARS and \$25 million of Jefferson County, Alabama Sewer Revenue Refunding Warrants ARS.

(4) The portion of these investments we do not own is approximately \$63 million as of September 30, 2013 and are included as a component of noncontrolling interest in our Consolidated Statements of Financial Condition. The

weighted average portion we own is approximately \$153 million or 71% of the total private equity investments of \$216 million included in our Consolidated Statements of Financial Condition.

Other investments include \$176 million of financial instruments that are related to MK & Co.'s obligations to (5) perform under certain of its historic deferred compensation plans (see Note 2 and Note 24 for further information regarding these plans).

(6) Primarily comprised of forward commitments to purchase GNMA MBS arising from our fixed income public finance operations (see Note 21 for additional information regarding these commitments).

Goodwill fair value measurements are classified within Level 3 of the fair value hierarchy, which are generally (7) determined using unobservable inputs. See Note 13 for additional information regarding the annual impairment analysis.

(8) Includes individual loans classified as held for sale, which were recorded at a fair value lower than cost.

Represents the fair value of foreclosed properties which were measured at a fair value subsequent to their initial (9) classification as OREO. The recorded value in the Consolidated Statements of Financial Condition is net of the estimated selling costs.

Index

The adjustment to fair value of the nonrecurring fair value measures for the year ended September 30, 2014 resulted in \$467 thousand in additional provision for loan losses and \$203 thousand in other losses. The adjustment to fair value of the nonrecurring fair value measures for the year ended September 30, 2013 resulted in \$8.7 million in additional provision for loan losses and \$529 thousand in other losses.

Changes in Level 3 recurring fair value measurements

The realized and unrealized gains and losses for assets and liabilities within the Level 3 category presented in the tables below may include changes in fair value that were attributable to both observable and unobservable inputs.

Additional information about Level 3 assets and liabilities measured at fair value on a recurring basis is presented below:

(1) Primarily results from valuation adjustments of certain private equity investments. Since we only own a portion of these investments, our share of the net valuation adjustments resulted in a gain of \$12.2 million which is included in net income attributable to RJF (after noncontrolling interests). The noncontrolling interests' share of the net valuation adjustments was a gain of approximately \$3.7 million.

(2) Our policy is that the end of each respective quarterly reporting period determines when transfers of financial instruments between levels are recognized.

(3) The transfers into Level 3 were comprised of transfers of balances previously included in other receivables on our Consolidated Statements of Financial Condition.

(4) The transfers out of Level 3 were comprised of transfers of cash and cash equivalent balances previously included in private equity investments on our Consolidated Statements of Financial Condition.

- Results from valuation adjustments of certain private equity investments and the April 29, 2013 sale of our indirect investment in Albion Medical Holdings, Inc. (“Albion”). Since we only own a portion of these investments, our
- (1) share of the net valuation adjustments and Albion sale resulted in a gain of \$28.4 million which is included in net income attributable to RJF (after noncontrolling interests). The noncontrolling interests’ share of the net gain is approximately \$42.3 million.
 - (2) Results primarily from the April 29, 2013 sale of our indirect investment in Albion. The amount is presented gross, and therefore includes amounts pertaining to interests held by others.
 - (3) Our policy is that the end of each respective quarterly reporting period determines when transfers of financial instruments between levels are recognized.

September 30, 2012	\$553	\$29	\$6	\$5,850	\$249	\$123,559	\$110,193	\$336,927	\$4,092	\$ (98)
Change in unrealized gains (losses) for the year included in earnings (or changes in net assets) for assets held at the end of the year	\$—	\$9	\$(5)	\$(1,034)	\$(691)	\$(9,060)	\$(1,528)	\$36,098	(1) \$172	\$ —

(1) Primarily results from valuation adjustments of certain private equity investments. Since we only own a portion of these investments, our share of the net valuation adjustments resulted in a gain of \$15.2 million which is included in net income attributable to RJF (after noncontrolling interests). The noncontrolling interests' share of the net valuation adjustments was a gain of approximately \$20.9 million.

(2) During the year ended September 30, 2012, we transferred certain non-agency CMOs and ABS securities which were previously included in Level 2, into Level 3, due to a decrease in the availability and reliability of the observable inputs utilized in the respective instruments' fair value measurement.

(3) The transfers out of Level 3 were a result of an increase in availability and reliability of the observable inputs utilized in the respective instruments' fair value. Our policy is that the end of each respective quarterly reporting period determines when transfers of financial instruments between levels are recognized.

(4) Includes private equity investments of approximately \$46 million arising from the Morgan Keegan acquisition and \$97 million of other investments arising from the consolidation of certain of Morgan Keegan's private equity funds (see Note 3 for further information regarding the Morgan Keegan acquisition).

As of September 30, 2014, 8.6% of our assets and 3% of our liabilities are instruments measured at fair value on a recurring basis. Instruments measured at fair value on a recurring basis categorized as Level 3 as of September 30, 2014 represent 21% of our assets measured at fair value. In comparison as of September 30, 2013, 8.6% and 2.5% of our assets and liabilities, respectively, represented instruments measured at fair value on a recurring basis. Instruments measured at fair value on a recurring basis categorized as Level 3 as of September 30, 2013 represented 24% of our assets measured at fair value. The balances of our level 3 assets have decreased compared to September 30, 2013, primarily as a result of distributions received from, and sales of, certain investments in our private equity portfolio, as well as the sale or redemption of a portion of our ARS portfolio. Accordingly, Level 3 instruments as a percentage of total financial instruments have decreased by 3% as compared to September 30, 2013.

Index

Gains and losses included in earnings are presented in net trading profit and other revenues in our Consolidated Statements of Income and Comprehensive Income as follows:

For the year ended September 30, 2014	Net trading profits (in thousands)	Other revenues
Total (losses) gains included in revenues	\$(366) \$21,116
Change in unrealized gains for assets held at the end of the year	\$19	\$20,055
For the year ended September 30, 2013	Net trading profits (in thousands)	Other revenues
Total (losses) gains included in revenues	\$(143) \$76,101
Change in unrealized (losses) gains for assets held at the end of the year	\$(103) \$29,963
For the year ended September 30, 2012	Net trading profits (in thousands)	Other revenues
Total (losses) gains included in revenues	\$(937) \$34,083
Change in unrealized (losses) gains for assets held at the end of the year	\$(1,030) \$24,991

Quantitative information about level 3 fair value measurements

The significant assumptions used in the valuation of level 3 financial instruments are as follows (the table that follows includes the significant majority of the financial instruments we hold that are classified as level 3 measures):

Level 3 financial instrument	Fair value at September 30, 2014 (in thousands)	Valuation technique(s)	Unobservable input	Range (weighted-average)
Recurring measurements:				
Available for sale securities:				
ARS:				
Municipals	\$57,728	Recent trades	Observed trades (in inactive markets) of in-portfolio securities	88% of par - 88% of par (88% of par)
Municipals	\$11,025	Income or market approach: Scenario 1 - recent trades	Observed trades (in inactive markets) of in-portfolio securities	70% of par - 70% of par (70% of par)
		Scenario 2 - discounted cash flow	Average discount rate ^(a)	4.44% - 6.82% (5.63%)
			Average interest rates applicable to future interest income on the securities ^(b)	1.68% - 4.31% (3.00%)
			Prepayment year ^(c)	2017 - 2024 (2021)
			Weighting assigned to outcome of scenario1/ scenario 2	20%/80%
Municipals	\$17,943	Discounted cash flow	Average discount rate ^(a)	3.08% - 5.82% (3.77%)
			Average interest rates applicable to future interest income on the securities ^(b)	1.44% - 5.74% (1.81%)
			Prepayment year ^(c)	2017 - 2024 (2019)
Preferred securities	\$114,039	Discounted cash flow	Average discount rate ^(a)	3.69% - 5.08% (4.35%)
			Average interest rates applicable to future interest income on the securities ^(b)	2.41% - 4.03% (2.54%)
			Prepayment year ^(c)	2015 - 2019 (2019)
Private equity investments:	\$46,402	Income or market approach: Scenario 1 - income approach - discounted cash flow	Discount rate ^(a)	13.0% - 17.5% (15.9%)
			Terminal growth rate of cash flows	3% - 3% (3%)
		Scenario 2 - market approach - market	Terminal year EBITDA Multiple ^(d)	2016 - 2018 (2017) 4.75 - 7.50 (6.30)

		multiple method	Weighting assigned to outcome of scenario 1/scenario 2	72%/28%

Index

The text of the footnotes to the table on the previous page are as follows:

(a) Represents discount rates used when we have determined that market participants would take these discounts into account when pricing the investments.

(b) Future interest rates are projected based upon a forward interest rate path, plus a spread over such projected base rate that is applicable to each future period for each security within this portfolio segment. The interest rates presented represent the average interest rate over all projected periods for securities within the portfolio segment.

(c) Assumed year of at least a partial redemption of the outstanding security by the issuer.

(d) Represents amounts used when we have determined that market participants would use such multiples when pricing the investments.

(e) Certain direct private equity investments are valued initially at the transaction price until either our annual review, significant transactions occur, new developments become known, or we receive information from the fund manager that allows us to update our proportionate share of net assets, when any of which indicate that a change in the carrying values of these investments is appropriate.

(f) The valuation techniques used for the impaired corporate loan portfolio as of September 30, 2014 were appraisals less selling costs for the collateral dependent loans, and either discounted cash flows or distressed enterprise value for the remaining impaired loans that are not collateral dependent.

Qualitative disclosure about unobservable inputs

For our recurring fair value measurements categorized within Level 3 of the fair value hierarchy, the sensitivity of the fair value measurement to changes in significant unobservable inputs and interrelationships between those unobservable inputs are described below:

Auction rate securities:

One of the significant unobservable inputs used in the fair value measurement of auction rate securities presented within our available for sale securities portfolio relates to judgments regarding whether the level of observable trading activity is sufficient to conclude markets are active. Where insufficient levels of trading activity are determined to exist as of the reporting date, then management's assessment of how much weight to apply to trading prices in inactive markets versus management's own valuation models could significantly impact the valuation conclusion. The valuation of the securities impacted by changes in management's assessment of market activity levels could be either higher or lower, depending upon the relationship of the inactive trading prices compared to the outcome of management's internal valuation models.

The future interest rate and maturity assumptions impacting the valuation of the auction rate securities are directly related. As short-term interest rates rise, due to the variable nature of the penalty interest rate provisions embedded in most of these securities in the event auctions fail to set the security's interest rate, then a penalty rate that is specified in the security increases. These penalty rates are based upon a stated multiple applied to a defined short-term interest rate index. Management estimates that at some level of increase in short-term interest rates, issuers of the securities will have the economic incentive to refinance (and thus prepay) the securities. Therefore, the short-term interest rate assumption directly impacts the input related to the timing of any projected prepayment. The faster and steeper short-term interest rates rise, the earlier prepayments will likely occur and the higher the fair value of the security.

Private equity investments:

The significant unobservable inputs used in the fair value measurement of private equity investments relate to the financial performance of the investment entity and the market's required return on investments from entities in industries in which we hold investments. Significant increases (or decreases) in our investment entities' future economic performance will have a directly proportional impact on the valuation results. The value of our investment moves inversely with the market's expectation of returns from such investments. Should the market require higher returns from industries in which we are invested, all other factors held constant, our investments will decrease in value. Should the market accept lower returns from industries in which we are invested, all other factors held constant, our investments will increase in value.

Fair value option

The fair value option is an accounting election that allows the reporting entity to apply fair value accounting for certain financial assets and liabilities on an instrument by instrument basis. As of September 30, 2014 and 2013, we have elected not to choose the fair value option for any of our financial assets or liabilities not already recorded at fair value.

Index

Additional disclosures about the fair value of financial instruments that are not carried on the Consolidated Statements of Financial Condition at fair value

Many, but not all, of the financial instruments we hold are recorded at fair value in the Consolidated Statements of Financial Condition.

The following represent financial instruments in which the ending balance at September 30, 2014 and 2013 is not carried at fair value, as computed in accordance with the GAAP definition of fair value (an exit price concept, refer to Note 2 for further discussion), on our Consolidated Statements of Financial Condition:

Short-term financial instruments: The carrying value of short-term financial instruments, including cash and cash equivalents, assets segregated pursuant to federal regulations and other segregated assets, securities either purchased or sold under agreements to resell and other collateralized financings are recorded at amounts that approximate the fair value of these instruments. These financial instruments generally expose us to limited credit risk and have no stated maturities or have short-term maturities and carry interest rates that approximate market rates. Under the fair value hierarchy, cash and cash equivalents and assets segregated pursuant to federal regulations and other segregated assets are classified as Level 1. Securities either purchased or sold under agreements to resell and other collateralized financings are classified as Level 2 under the fair value hierarchy because they are generally variable rate instruments collateralized by U.S. government or agency securities.

Bank loans, net: These financial instruments are primarily comprised of loans originated or purchased by RJ Bank and include C&I loans, commercial and residential real estate loans, tax-exempt loans, as well as SBL intended to be held until maturity or payoff, and are recorded at amounts that result from the application of the loans held for investment methodologies summarized in Note 2. In addition, these financial instruments consist of loans held for sale, which are carried at the lower of cost or market value. A portion of these loans held for sale are included in the nonrecurring fair value measurements in addition to any impaired loans held for investment.

Fair values for both variable and fixed-rate loans held for investment are estimated using discounted cash flow analyses, based on interest rates currently being offered for loans with similar terms to borrowers of similar credit quality. This methodology for estimating the fair value of loans does not consider other market variables and, therefore, is not based on an exit price concept. Refer to Note 2 for information regarding the fair value policies specific to loans held for sale.

Receivables and other assets: Brokerage client receivables, receivables from broker-dealers and clearing organizations, stock borrowed receivables, loans to financial advisors, net, other receivables, and certain other assets are recorded at amounts that approximate fair value and are classified as Level 2 and 3 under the fair value hierarchy. As specified under GAAP, the FHLB and FRB stock are recorded at cost, which we have determined to approximate their estimated fair value, and are classified as Level 2 under the fair value hierarchy.

Bank deposits: The fair values for demand deposits are equal to the amount payable on demand at the reporting date (that is, their carrying amounts). The carrying amounts of variable-rate money market and savings accounts approximate their fair values at the reporting date as these are short-term in nature. Due to their demand or short-term nature, the demand deposits and variable rate money market and savings accounts are classified as Level 2 under the fair value hierarchy. Fair values for fixed-rate certificate accounts are estimated using a discounted cash flow calculation that applies interest rates currently being offered on certificates to a schedule of expected monthly maturities on time deposits. These fixed rate certificate accounts are classified as Level 3 under the fair value hierarchy.

Payables: Brokerage client payables, payables due to broker-dealers and clearing organizations, stock loaned payables, and trade and other payables are recorded at amounts that approximate fair value and are classified as Level 2 under the fair value hierarchy.

Other borrowings: The carrying amount of other borrowings approximate their fair value due to the relative short-term nature of such borrowings, some of which are day-to-day. The portion of other borrowings which are not “day-to-day” are primarily comprised of RJ Bank’s borrowings from the FHLB which, by their nature, reflect terms that approximate current market rates for similar loans. Under the fair value hierarchy, our other borrowings are classified as Level 2.

Corporate debt: The fair value of the mortgage note payable associated with the financing of our Saint Petersburg, Florida corporate offices is based upon an estimate of the current market rates for similar loans. The fair value of our senior notes is based upon recent trades of those or other similar debt securities in the market.

Off-balance sheet financial instruments: The fair value of unfunded commitments to extend credit is based on a methodology similar to that described above for loans and further adjusted for the probability of funding. The fair value of these unfunded lending commitments, in addition to the fair value of other off-balance sheet financial instruments, are classified as Level 3 under the fair value hierarchy. See Note 27 for further discussion of off-balance sheet financial instruments.

Index

The estimated fair values by level within the fair value hierarchy and the carrying amounts of certain of our financial instruments not carried at fair value are as follows:

	Quoted prices in active markets for identical assets (Level 1) (in thousands)	Significant other observable inputs (Level 2)	Significant unobservable inputs (Level 3)	Total estimated fair value	Carrying amount
September 30, 2014					
Financial assets:

Total	\$679,393	\$238,400	\$579,705	\$220,656

(1)

Represents the derivative contracts held for trading purposes. These balances do not include all derivative instruments since the derivative instruments associated with offsetting matched book positions are included on their own line item on our Consolidated Statements of Financial Condition. See Note 18 for further information regarding all of our derivative transactions, and see Note 19 for additional information regarding offsetting financial instruments.

Included in net trading profit on our Consolidated Statements of Income and Comprehensive Income are net unrealized (losses) gains related to trading instruments held as of September 30, 2014, 2013, and 2012 of \$(4.8) million, \$(4) million, and \$576 thousand, respectively.

See Note 5 for additional information regarding the fair value of trading instruments and trading instruments sold but not yet purchased.

Index

NOTE 7 – AVAILABLE FOR SALE SECURITIES

Available for sale securities are comprised of MBS and CMOs owned by RJ Bank and ARS owned by one of our non-broker-dealer subsidiaries.

Certain of the non-agency CMOs held within the available for sale securities portfolio owned by RJ Bank were sold during the year ended September 30, 2014. The sales resulted in proceeds of \$26.6 million and a gain of \$264 thousand which is included in other revenues on our Consolidated Statements of Income and Comprehensive Income. There were no sales of available for sale securities owned by RJ Bank in either the year ended September 30, 2013 or the year ended September 30, 2012.

Certain securities in the ARS portion of the available for sale securities portfolio have been redeemed by their issuer or sold in market transactions. Sale or redemption activities within the ARS portion of the portfolio resulted in aggregate proceeds of \$51.2 million and a gain of \$7.1 million in the year ended September 30, 2014 which is included in other revenues on our Consolidated Statements of Income and Comprehensive Income. During the year ended September 30, 2013, sales or redemption activities within the ARS portion of the available for sale securities portfolio resulted in proceeds of \$14.4 million and a gain of \$1.6 million. During the year ended September 30, 2012, redemptions of ARS by their issuers resulted in proceeds of \$75 million and a gain of \$360 thousand.

(3) As of September 30, 2012, the non-credit portion of OTTI recorded in AOCI was \$15.5 million (before taxes).

(4) As of September 30, 2012, the non-credit portion of OTTI recorded in AOCI was \$7.6 million (before taxes).

(5) As of September 30, 2012, the non-credit portion of OTTI recorded in AOCI was \$1.5 million (before taxes).

See Note 5 for additional information regarding the fair value of available for sale securities.

Index

The contractual maturities, amortized cost, carrying values and current yields for our available for sale securities are as presented below. Since RJ Bank's available for sale securities are backed by mortgages, actual maturities will differ from contractual maturities because borrowers may have the right to prepay obligations without prepayment penalties. Expected maturities of ARS may differ significantly from contractual maturities, as issuers may have the right to call or prepay obligations with or without call or prepayment penalties.

The reference point for determining when securities are in a loss position is the reporting period end. As such, it is possible that a security had a fair value that exceeded its amortized cost on other days during the period.

Agency MBS and CMOs

FNMA, the Federal Home Loan Mortgage Corporation (“FHLMC”), as well GNMA, guarantee the contractual cash flows of the agency MBS and CMOs. At September 30, 2014, of the 11 of our U.S. government-sponsored enterprise MBS and CMOs in an unrealized loss position, three were in a continuous unrealized loss position for less than 12 months and eight were for 12 months or more. We do not consider these securities other-than-temporarily impaired due to the guarantee provided by FNMA, FHLMC, and GNMA as to the full payment of principal and interest, and the fact that we have the ability and intent to hold these securities to maturity.

Non-agency CMOs

All individual non-agency securities are evaluated for OTTI on a quarterly basis. Only those non-agency CMOs whose amortized cost basis we do not expect to recover in full are considered to be other than temporarily impaired as we have the ability and intent to hold these securities to maturity. To assess whether the amortized cost basis of non-agency CMOs will be recovered, RJ Bank performs a cash flow analysis for each security. This comprehensive process considers borrower characteristics and the particular attributes of the loans underlying each security. Loan level analysis includes a review of historical default rates, loss severities, liquidations, prepayment speeds and delinquency trends. In addition to historical details, home prices and the economic outlook are considered to derive the assumptions utilized in the discounted cash flow model to project security specific cash flows, which factors in the amount of credit enhancement specific to the security. The difference between the present value of the cash flows expected and the amortized cost basis is the credit loss, and it is recorded as OTTI.

The significant assumptions used in the cash flow analysis of non-agency CMOs are as follows:

	September 30, 2014	
	Range	Weighted-average ⁽¹⁾
Default rate	0% - 10.9%	4.31%
Loss severity	0% - 74.4%	39.84%
Prepayment rate	5% - 34.2%	10.42%

(1) Represents the expected activity for the next twelve months.

Index

At September 30, 2014, 14 of the 19 non-agency CMOs were in a continuous unrealized loss position. Of these, 13 were in that position for 12 months or more and one was in a continuous unrealized loss position for less than 12 months. Based on the expected cash flows derived from the model utilized in our analysis, we expect to recover all unrealized losses not already recorded in earnings on our non-agency CMOs. However, it is possible that the underlying loan collateral of these securities will perform worse than current expectations, which may lead to adverse changes in the cash flows expected to be collected on these securities and potential future OTTI losses. As residential mortgage loans are the underlying collateral of these securities, the unrealized losses at September 30, 2014 reflect the uncertainty in the markets for these instruments.

ARS

The cost basis in the ARS we hold is the fair value of the securities in the period in which we acquired them. The par value of the ARS we hold as of September 30, 2014 is \$221.8 million. Only those ARS whose amortized cost basis we do not expect to recover in full are considered to be other-than-temporarily impaired as we have the ability and intent to hold these securities to maturity. All of our ARS securities are evaluated for OTTI on a quarterly basis.

Within our ARS preferred securities, we analyze the credit ratings associated with each security as an indicator of potential credit impairment. As of September 30, 2014, and including subsequent ratings changes, all of the ARS preferred securities were rated investment grade by at least one rating agency and there is no potential impairment since the fair values of these securities exceed their cost basis.

Within our municipal ARS holdings as of September 30, 2014, there are two municipal ARS securities with a fair value less than their cost basis, indicating potential impairment. We analyzed the credit ratings associated with these securities as an indicator of potential credit impairment, and including subsequent ratings changes, determined that these securities maintained investment grade ratings by at least one rating agency. We have the ability and intent to hold these securities to maturity and expect to recover their entire cost basis and therefore concluded that none of the OTTI within our municipal ARS portfolio is related to potential credit loss.

We hold Jefferson County, Alabama Limited Obligation School Warrants ARS ("Jeff Co. Schools ARS") within our municipal ARS holdings. As of September 30, 2013, we also held Jefferson County, Alabama Sewer Revenue Refunding Warrants ARS ("Jeff Co. Sewers ARS"). During the first quarter ended December 31, 2013, the Jefferson County, Alabama voluntary petition for relief under Chapter 9 of the U.S. Bankruptcy Code in the U.S. District Court for the Northern District of Alabama was resolved. As a result of the resolution of this matter, Jefferson County redeemed the Jeff Co. Sewers ARS during our first quarter, and we received \$26.5 million in proceeds from their redemption and realized a \$5.5 million gain, which is included in other revenues on our Consolidated Statements of Income and Comprehensive Income for the year ended September 30, 2014. The Jeff Co. Schools ARS were not affected by the resolution of the Jefferson County, Alabama bankruptcy matter and remain in our ARS portfolio as of September 30, 2014. The fair value of the Jeff Co. Schools ARS exceed their cost basis as of September 30, 2014.

Other-than-temporarily impaired securities

Although there is no intent to sell either our ARS or our non-agency CMOs and it is not more likely than not that we will be required to sell these securities, as of September 30, 2014 we do not expect to recover the entire amortized cost basis of certain securities within our non-agency CMO portfolio.

Changes in the amount of OTTI related to credit losses recognized in other revenues on available for sale securities are as follows:

Year ended September 30,

Edgar Filing: RAYMOND JAMES FINANCIAL INC - Form 10-K

	2014	2013	2012
	(in thousands)		
Amount related to credit losses on securities we held at the beginning of the year	\$28,217	\$27,581	\$22,306
Additions to the amount related to credit loss for which an OTTI was not previously recognized	—	—	1,409
Decreases to the amount related to credit loss for securities sold during the year	(9,541) —	—
Additional increases to the amount related to credit loss for which an OTTI was previously recognized	27	636	3,866
Amount related to credit losses on securities we held at the end of the year	\$18,703	\$28,217	\$27,581

NOTE 8 - RECEIVABLES FROM AND PAYABLES TO BROKERAGE CLIENTS

The information presented below is exclusive of the transactions and balances that arise between RJ Bank and clients of our broker-dealer subsidiaries. Such transactions include those arising from the RJBDP program (as hereinafter defined in Note 14) and securities that serve as collateral under RJ Bank's SBL program (see Note 9 for additional information).

Receivables from brokerage clients

Receivables from brokerage clients include amounts arising from normal cash and margin transactions and fees receivable. Margin receivables are collateralized by securities owned by brokerage clients. Such collateral is not included within any balances reflected on our Consolidated Statements of Financial Condition (see Note 19 for information regarding our use of a portion of this collateral in certain borrowing transactions). The amount receivable from clients is as follows:

	September 30,	
	2014	2013
	(in thousands)	
Brokerage client receivables	\$2,127,078	\$1,983,402
Allowance for doubtful accounts	(274) (62
Brokerage client receivables, net	\$2,126,804	\$1,983,340

Payables to brokerage clients

Payables to brokerage clients include brokerage client funds on deposit awaiting reinvestment. The following table presents a summary of such payables:

	September 30,	
	2014	2013
	(in thousands)	
Brokerage client payables:		
Interest bearing	\$3,578,101	\$5,457,107
Non-interest bearing	378,003	485,736
Total brokerage client payables	\$3,956,104	\$5,942,843

NOTE 9 – BANK LOANS, NET

Bank client receivables are comprised of loans originated or purchased by RJ Bank and include C&I loans, tax-exempt loans, SBL, as well as commercial and residential real estate loans. These receivables are collateralized by first or second mortgages on residential or other real property, other assets of the borrower, a pledge of revenue or are unsecured.

We segregate our loan portfolio into six loan portfolio segments: C&I, CRE, CRE construction, tax-exempt, residential mortgage, and SBL. These portfolio segments also serve as the portfolio loan classes for purposes of credit analysis, except for residential mortgage loans which are further disaggregated into residential first mortgage and residential home equity classes.

Index

The following table presents the balances for both the held for sale and held for investment loan portfolios as well as the associated percentage of each portfolio segment in RJ Bank's total loan portfolio:
