DILUTION

If you invest in our common shares, you will experience dilution to the extent of the difference between the public offering price per share you pay in this offering and the net tangible book deficit per common share immediately after this offering. Net tangible book deficit represents the amount of our total tangible assets reduced by our total liabilities. Our net tangible book deficit as of June 30, 2009 was approximately \$76,409,592, or \$1.3887 per common share. After deducting the estimated underwriter s commission and estimated offering expenses paid by us, our net tangible book deficit, as adjusted for the offering (assuming no exercise by the underwriter of its over-allotment option), as of June 30, 2009, would have been \$29,209,591, or \$0.4796 per common share. Assuming the occurrence of this offering as of June 30, 2009, this represents an immediate decrease in net tangible book deficit of \$0.9091 per common share to our existing shareholders and an immediate dilution of \$8.9796 per common share to new investors purchasing our common shares in this offering.

The following table illustrates the estimated per share dilution:

\$ 8.50
\$1.3887
\$0.9091
\$0.4796

Dilution to new investors purchasing common shares in the offering

\$8.9796

If the underwriter exercises its over-allotment option in full, the as adjusted net tangible book deficit would decrease to approximately \$0.3574 per common share, representing an immediate decrease in net tangible book deficit of \$1.0312 per common share to our existing shareholders and an immediate dilution of \$8.8574 per common share to new investors purchasing our common shares in this offering.

The exercise of outstanding options and warrants having an exercise price less than the public offering price will decrease dilution to new investors.
